1 Welcome to Triple'A Plus Web User Interface

Triple'A Plus is a front- and middle-office wealth management platform which combines Portfolio Management, CRM, Advisory, Compliance, Risk and Client Reporting functionality into a single browser-based desktop. The Triple'A Plus Web User Interface (WUI) platform efficiently supports discretionary portfolio management, investment advisory and execution-only service models and empowers client advisors and portfolio managers to increase assets under management, improve customer service and generate higher investment performance. In addition, habitual users of the Internet or an intranet will have no problem learning to use the WUI because it is designed to be as intuitive as possible.

1.1 Purpose and intended audience

This user guide is intended for end users who would like information regarding the WUI. The goal of this guide is to provide a broad overview of the main functions of the WUI, particularly as it relates to the functionalities of the Portfolio Management and Analysis module. Other Triple'A Plus Web modules (for example, Monitoring, Portfolio Analysis, Client Data Management) that are accessible through the WUI are not covered in this guide. Detailed information about these modules is available in their own specific guides.

Details about the packaged objects for each Portfolio Management and Analysis functionality can be found in the *Triple'A Plus Web Packaging Reference Guide*.

1.2 Terminology

This user guide employs the following terminology:

Term	Function
hover	Place the mouse pointer over the indicated object or field name. Do not click the mouse button.
click	Place the mouse pointer over the indicated object and click the primary mouse button once.
double-click	Place the mouse pointer over the indicated object and click the primary mouse button twice rapidly.
right-click	Place the mouse pointer over the indicated object and click the secondary mouse button once.
drag-and-drop	Click an object, hold the primary mouse button down, and then drag the object to the desired location.
text field	Click in the field to type in text.
checkbox	Click on the box to indicate yes/no selections.
button	Click on the button to execute a command such as Search or Submit.

1.3 Profiles

The Web User Interface (WUI) uses profiles, which can be customised or created to give different experiences to different types of users. In the standard packaging, two profiles are delivered: the Default Profile and the Relationship Manager Profile. Everything that is described in this guide is related to the Default Profile, which shows information in a "Portfolio Manager" style. For specific information about the Relationship Manager Profile, its

concepts, and its differences with the Default Profile, see chapter [Relationship Manager Profile](#).

2 Understanding the WUI

Triple'A Plus Web has a simple, intuitive Web User Interface (WUI) layout. This section provides an overview of the features and functionalities of the standard "out of the box" WUI. Because Triple'A Plus can be customized to suit the needs of your company, the standard WUI images in this section might not be identical to the WUI that you see on your computer. Nevertheless, the concepts and features of the WUI remain the same.

How to use the main navigation tools of the WUI are described in the following sections:

- [Toolbar](#)
- [Menu bar](#)
- [Main work area](#)
- [Tabs](#)
- [Icons, fields, and links](#)
- [Notifications indicator](#)

The following image provides a quick overview of where the main navigation tools are located.

Menus

Currently selected menu (**Analysis**) is highlighted.

Search or Advanced Search icon

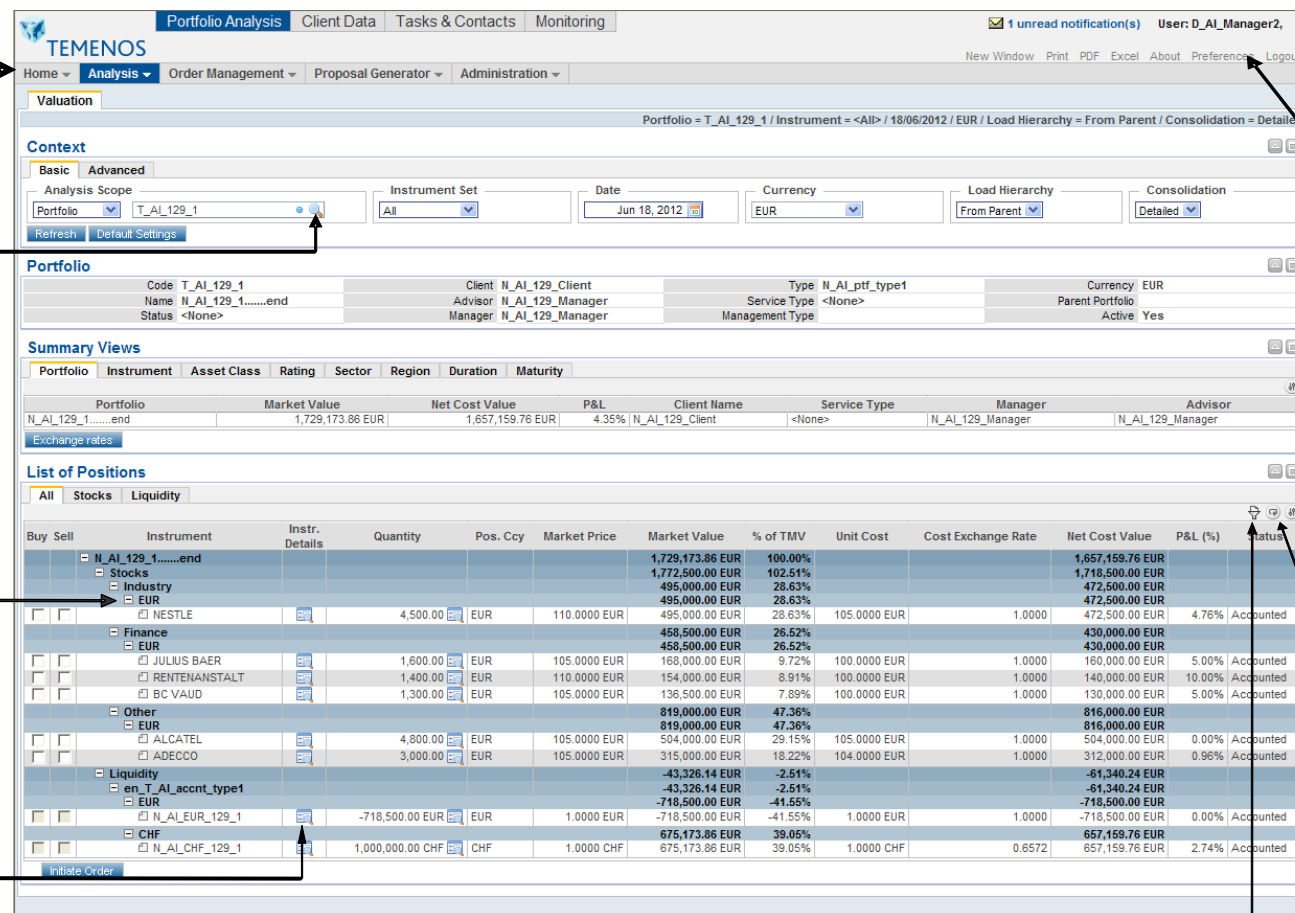

Search icon forwards you to the search window. The Advanced Search icon (contains blue dot) is similar to Search icon and provides an auto-complete feature.

Collapse / Expand (single) icon

Screen content can be grouped into branches. You can collapse or expand each branch by clicking on these icons.

Details icon

Typically, this icon is placed in quantity columns (to get details on the position or operation) and in instrument columns (to get details on the instrument).

Initiate Order

Toolbar

Column Selector icon

Columns can be hidden or shown according to your needs. Columns can also be moved or used for sorting results.

Row Selector icon

This icon lets you group the table content into branches, as well as collapse or expand the branches.

Filter icon

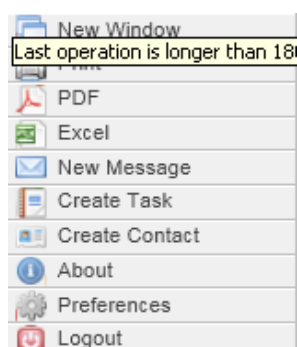

This icon provides filter options on the data of a table according to your needs.

2.1 Toolbar

The Triple'A Plus Web toolbar is located at the top right corner of the WUI and contains either hyperlinks or icons to execute a function. The choice to display hyperlinks or icons is configurable for all users through a system configuration described in the *Triple'A Plus Advanced Customisation Guide*. The default configuration displays only hyperlinks.

Hyperlink	Icon	Description
New Window		Opens a new browser window. For more information about opening a new browser, see section Opening new browser window in this guide.
Print		Prints the information that you are currently viewing on the WUI. For more information about printing, see section Printing in this guide.
PDF		Creates a Portable Document Format (PDF) file of the information that you are currently viewing on the screen. This allows you to preserve the original layout of the screen and to take advantage of the features of PDF files. For more information about creating a PDF file, see section Creating PDF in this guide.
Excel		Exports data/results that are displayed on the WUI directly to an external Excel spreadsheet file, which lets you apply the tools and features of Excel to your data for further analysis. For more information about exporting to Excel, see section Exporting to spreadsheet in this guide.
New Message		Displays a pop-up window where you can define a new message. For more information, see section Notifications and Messaging .
Create Task		Only available if the TCM module is installed. Displays a pop-up window where you can define a new task. For more information about tasks, refer to the <i>Triple'A Plus Web Task and Contact Management User Guide</i> .
Create Contact		Only available if the TCM module is installed. Displays a pop-up window where you can define a new contact. For more information about contacts, refer to the <i>Triple'A Plus Web Task and Contact Management User Guide</i> .
About		Displays a dialog box with information about Odyssey Financial Technologies and the Triple'A Plus Web application.
Preferences		Contains grouped options that lets you specify your personal preferences, such as in tabs: - General: - Language – Lets you change the language that is displayed on the screen if you have more than one language installed in your Triple'A Plus Web application. For more information about how to change the language, see section Changing the display language. - Profile – Lets you define your user profile. Your user profile determines your level of access to Triple'A Plus. You see only the objects, features, functions, screens, and menus to which your user profile provides access. For more information, see section Changing your user profile. - Security: - Password - Lets you modify your Triple'A Plus Web password. For more information about how to change your password, see section Changing your password. - Personalization: - Menu position - Lets you change, if you have the rights, the position of the navigation menu bar to be either horizontal (at the top only) or vertical (on the left side only). For more information, see section Changing the position of the menu.
Logout		Ends (logs out) your session with the WUI.

You can also right-click in the main work area to display a contextual menu of the same options found in the Triple'A Plus Web toolbar. To hide the contextual menu, click in the main work area.

Contextual menu options

2.2 Menu bar

You can select an option in Preferences (from the toolbar) to display the menu bar either horizontally (located along the top of the screen) or vertically (located at the left side of the screen). Note that displaying the menu bar vertically will allow you to hide or show the menu to maximize the available space for Triple'A Plus functions.

The menu items are context sensitive. This means that the menu items change depending on the task that you are performing, and only appear when they are appropriate.

Depending on the security rules in place, you might not have access to all menu items and functionalities. If you want modifications to your security profile, contact your System Administrator or IT department.

2.3 Main work area

The main work area is divided into sections, which may or may not have a title, and displays actual information of the function or link that you selected. For example, if you selected to perform the search function, the main work area will display the search fields and/or search results. Fields, buttons, and other objects (such as icons) associated with the function are displayed in the sections, and results (of a search, of a financial function, etc.) are always displayed in tables, which lets you sort and filter the retrieved data.

2.4 Tabs

Next to the toolbar, you can find tabs that represent the different Triple'A Plus Web modules (e.g., Monitoring, Portfolio Analysis). Introductory information about these Triple'A Plus Web modules is provided in the table below. Detailed information about these modules can be found in their own separate guides.

Tab	Description	For more information
Portfolio Analysis	The Portfolio Analysis module is based on Triple'A Plus Core and offers the following features: • Standard portfolio analysis (Valuation, Performance, etc.) • Report Generation • Order Management • Proposal Generator • Administration	Refer to other sections of the current document and to the <i>Triple'A Plus Web Packaging Reference Guide</i> .
Client Data	The Client Data Management module (CDM) is used for gathering and validating client data, opening client accounts, and producing and printing contractual documents.	Refer to the <i>Triple'A Plus Web CDM User Guide</i> .
Tasks and Contacts	With the Task and Contact Management module (TCM), you can create tasks for yourself (single task) or assign them (assigned tasks) to other users. In addition, the module assists you with logging business interaction between you and your client. This allows you to track all contacts with your clients and prospects.	Refer to the <i>Triple'A Plus Web Task and Contact Management User Guide</i> .
Monitoring	The Monitoring module is designed to help you coordinate the monitoring activities of portfolio management.	Refer to the <i>Triple'A Plus Web Monitoring User Guide</i> .

Depending on the security rules in place, you might not have access to all menu items and functionalities. If you want modifications to your security profile, contact your System Administrator or IT department.

2.5 Icons, fields, and links

Icons, fields, and links that might appear outside of the toolbar on the WUI are:

Icon / Fields	Description
	Search icon. Displays a search tool that lets you search records of the corresponding entity and if necessary, save the search criteria to construct a search query.
	Advanced Search icon. Same functionality as the Search icon detailed above, but also provides an associated search field that has an auto-complete feature.
	Text field. Lets you enter information, such as a specific portfolio code or the first letter of a client code, into its field to search and retrieve corresponding information that will be displayed in the main work area.
 and 	Hide icon and Show icon. Lets you hide or show the corresponding section in the main work area. When hidden, only the section title (if available) is displayed.
 and 	Maximize icon and Minimize icon. Lets you maximize or minimize the display of the corresponding section in the main work area. When a section is maximized, its display occupies the entire main work area, including tabs, toolbar, menu bar, and notifications indicator

Icon / Fields	Description
 and 	Ascending icon and Descending icon. Lets you sort the column list in ascending or descending order.
	Row Selector icon. Lets you choose the displayed branch's levels of a tree view, which is displayed in the corresponding table in the main work area.
 and 	Collapse icon and Expand (single) icon. Lets you collapse/expand a branch of a tree view displayed in the corresponding table in the main work area.
	Filter icon. Opens a Filter window that provides available filter options on the list that is displayed in the corresponding table in the main work area.
	Column Selector icon. Opens a window that lets you decide which columns are hidden or shown. Columns can also be moved or used for sorting results.
	Add icon. Lets you add additional filter's criteria in the Filter window or search criteria in the searching tool
 and  and 	Sort icon, Sort Ascending icon, and Sort Descending icon. Lets you sort the column list in ascending or descending order, through the Column Selector window.
	Reset Criterion icon. Lets you reset (but not delete or remove from display) a filter criterion in the Filter window or a search criterion in the searching tool
	Details icon. Opens a window that provides detailed information about the corresponding object.
	Edit icon. Lets you edit/update the corresponding object.
	Delete icon. Lets you delete the corresponding object.
	Copy icon. Lets you copy the corresponding object.
	Report icon. Lets you generate a report based on the corresponding object.
	Configure and Generate Report icon. Lets you configure a report before generating it based on the corresponding object.
	Complete icon. Lets you edit/complete the corresponding object.
	Reset icon. Resets the value of the corresponding field to its default value.
	Logs icon. Opens a dialog box to show the financial execution logs for each Triple'A Service Layer (TSL) financial result.
	Excel icon. Allows you to export results from a financial function into Microsoft Excel

Icon / Fields	Description
	Close icon (of the web browser). Lets you close the browser.
	Close icon. Lets you close the different windows displayed in the application.
	Delete icon (of free text fields). Lets you clear the text in free text fields.
	Unread icon. Indicates that the corresponding notification or task is not read yet.
	Read icon. Indicates that the corresponding notification or task is read.
	Hourglass icon. The meaning of this icon varies in different contexts.
	Checkmark icon. The meaning of this icon varies in different contexts.
	Cross icon. The meaning of this icon varies in different contexts.
	Question Mark icon. The meaning of this icon varies in different contexts.
	Light Bulb icon. The meaning of this icon varies in different contexts.
	Yellow Warning icon. The meaning of this icon varies in different contexts.
	Red Warning icon. The meaning of this icon varies in different contexts.
Coloured text (hyperlinks)	Words and phrases in coloured (usually blue) text are hyperlinks, which are also identifiable when the cursor changes into a hand with an outstretched index finger  . Clicking on a hyperlink will take you to another screen with information relevant to the coloured text.
	Accept icon. Used in the context of Proposal Generator to accept a proposal.
	Reject icon. Used in the context of Proposal Generator to reject a proposal.
 and 	Subscribe icon and Unsubscribe icon. Used to subscribe/unsubscribe public alert.
	Execute icon. Used to execute the query associated with a private or public alert.
	Follow Up icon. Used to perform a follow-up of portfolios/clients related to a notification.
	Validate for Trading icon. Used in the context of Proposal Generator to validate when trading a proposal.
	Trade icon. Used in the context of Proposal Generator to trade a proposal.

Icon / Fields	Description
	Hide Menu icon. Used in the context of the vertical navigation menu positioned at the left side of the screen to hide the menu.
	Show Menu icon. Used in the context of the vertical navigation menu positioned at the left side of the screen to show the menu.
	Create Report icon (for Report Scheduling). Used to create a report based on a report scheduling configuration.
	Reactivate icon after a technical issue (for Report Scheduling). Used to reactivate an active report schedule after the occurrence of some technical issues.
	Reactivate icon (for Report Scheduling). Used to reactivate an inactive report schedule.

2.6 Notifications indicator

Notification is a feature of the Triple'A Plus Web Notifications and Message infrastructure. The web user interface (WUI) displays a small indicator that shows the number of unread notifications/messages and, if any, newly received notifications/messages. For more information about notifications and messages, see section [Notifications and Messaging](#).

The notification indicator is located at the top right corner of the WUI main window.

 1 unread notification(s)  1 new notification(s)

Notifications indicator

- The item "<n> unread notification(s)" indicates the number of unread notifications/messages and is always displayed (regardless the number of notifications). If one or more notifications/messages are unread, the **Unread Notifications** icon is displayed next to the number. If all notifications/messages are read or deleted, the **Read or Deleted Notifications** icon is displayed next to the number. When a notification is moved from unread to read or vice versa, the notification indicator automatically updates to reflect the number of unread notifications. (For more information about icons, see section [Icons, fields, and links](#).)
- The item "<n> new notification(s)" is displayed when new notifications/messages are received. If the WUI is requested to display a new view or the current view is reloaded, the second item disappears. During its display, this item indicates how many new notifications/messages are received. A notification/message is considered new only for about half minute. After that time, the system stops displaying the new notifications message, unless, of course, new notifications/messages have arrived again.

When you click on either item, you are being redirected to the **Notifications & Messages** view, located under **Portfolio Analysis > Home > Notifications & Messages**.

3 Managing the WUI

In this section, you will learn how to accomplish the following tasks to access or manage the Triple'A Plus Web User Interface (WUI):

- [Logging in](#)
- [Logging out](#)
- [Opening new browser window](#)
- [Printing](#)
- [Creating PDF files](#)
- [Exporting to spreadsheet](#)
- [Understanding the Micro-Excel Export](#)
- [Changing the display language](#)
- [Changing your user profile](#)
- [Changing your password](#)
- [Changing the position of the menu](#)
- [Executing business functions](#)
- [Saving business object in history](#)
- [Filtering retrieved results](#)
- [Showing levels of a tree view of a specific branch](#)
- [Showing and hiding columns](#)
- [Changing the columns display order](#)
- [Sorting displayed results](#)
- [Hiding and showing sections](#)
- [Maximizing size of sections](#)
- [Enabling Contextual Menu](#)
- [Using Keyboard Shortcuts](#)
- [Text formatting in free text fields](#)
- [Displaying TSL logs](#)

3.1 Logging in

To log in and access the WUI, you must have a:

- User name and password. Your company might have a password management policy that synchronizes your user name and password across all systems and applications, which means that after you log in to your computer with your user name and password, you do not need to log in again for access to Triple'A Plus Web.
- Uniform Resource Locator (URL) for Triple'A Plus Web. The URL is the website address of Triple'A Plus and usually takes the standard form <http://<hostmachine>/<application>/<page>>. The use of the standard form depends on your company.

If you have forgotten (or do not know) your user name, password, or the URL of Triple'A Plus Web, contact your System Administrator or IT department.

To log-in and access the WUI

1. Open your web browser.
2. In the **Address** field, type the Triple'A Plus Web URL.
3. Click **Go** button (or press <Enter> on your keyboard).

The **Log In** dialog box is displayed.

4. In the **Username** field, type your user name.
5. In the **Password** field, type your password.
6. Click **Sign in** button (or press <Enter> on your keyboard).

The WUI opens up and your user name is displayed in the top right corner.

Note: If you did not enter a valid username and password, the **Log In** dialog box is displayed again for you to re-enter your user name and password. User names and passwords are case-sensitive, so check that the Caps Lock key on your keyboard is turned off. If after several attempts you still cannot successfully log in, contact your System Administrator or IT department. In some cases, Triple'A Plus Web was configured to lock your account after several unsuccessful log in attempts. If you are locked out, contact your System Administrator or IT department.

3.2 Logging out

To log out of the WUI, click the **Logout** hyperlink in the toolbar or in the contextual menu.

Note: Generally, you achieve the same result whether you click the **Logout** hyperlink in the toolbar or the **Close** icon of the web browser. In some cases, however, using the **Close** icon might keep your session open until the system's timeout occurs. For both security reasons and the overall performance of the application, it is recommended that you always click the **Logout** hyperlink in the toolbar to explicitly terminate your session.

3.3 Opening new browser window

You can open a new browser window to display, by default, the application's homepage. The new browser window is opened under a new tab of the browser navigator and is totally independent from all previously opened browser windows. Independent actions and navigation is possible because the context is independent. The number of browser windows that you can open is only limited by the browser navigator. As a browser window is represented by a browser navigator's tab, all available features on the tabs are allowed.

To open a new browser window, click on the **New Window** hyperlink in the toolbar or in the contextual menu. A new window opens displaying the application's homepage with all available links and actions.

3.4 Printing

You must have one of the following connections to print your documents. If you are printing:

- from a local printer, your computer must be connected directly to the printer.
- from a remote or network printer, your computer must be set up to communicate with the remote or network printer.

If you have problems with your print connection, contact your System Administrator or IT department.

To print

1. Click on the **Print** hyperlink/icon in the toolbar or in the contextual menu.

The **Print** dialog box opens.

2. (Optional) Select your printing options.

3. Click **Print** button.

3.5 Creating PDF files

To create a PDF files, you must have Adobe Acrobat installed on your computer.

To create a PDF file

1. Click on the **PDF** hyperlink/icon in the toolbar or in the contextual menu.
A separate window opens displaying a PDF of the screen you are currently viewing.
2. Use the features of the PDF file to complete your task (for example, email copy, save, print, etc.)

3.6 Exporting to spreadsheet

Using this feature, you are exporting everything on the screen to a spreadsheet. If you only want to export specific results (i.e., from a table or matrix), see section [Understanding the Micro-Excel Export](#). To use this feature, you must have Microsoft Excel installed on your computer.

To export to a spreadsheet

1. Click on the **Excel** hyperlink/icon in the toolbar or in the contextual menu.
Note: A **File Download** dialog box might appear asking you to confirm that you want to open or save the new spreadsheet. Click **Open** button to view the spreadsheet. If you do not want to see this box each time you export data to a spreadsheet, uncheck the "Always ask before opening this type of file" box.
A new browser window opens displaying the information in a spreadsheet format.
2. Begin to use Excel's tools and features to manage the data.

3.7 Understanding the Micro-Excel Export

The Micro-Excel Export feature is similar to the option of exporting the current screen to Microsoft Excel (see section [Exporting to spreadsheet](#)), which can be found in the menu icons. The difference is that by clicking on the **Excel** icon that is displayed in the header of a table or matrix, you are exporting only the results from this table or matrix instead of exporting everything on the screen.

This feature is currently enabled by default only in the Relationship Manager Profile. Details on how to activate and configure these features can be found in the *Triple'A Plus Advanced Customisation Guide*.

3.8 Changing the display language

The WUI automatically displays the default language that was configured in the application. If there are more than one language installed and the default one does not suit you, you can set the WUI to display another one. Note that this setting will be remembered as the default for your subsequent connections to the application.

Only a System Administrator or your IT Department can install additional display languages.

To change the display language

1. Click on the **Preferences** hyperlink/icon in the toolbar or in the contextual menu.
The **User Preferences** dialog box is displayed and split into the following tabs: **General** (default), **Security**, and **Personalization**.
2. In the Display section of **General** tab, select a suitable display language from the drop-down list in the **Language** field.
3. Click **Apply and Close** button.

The display language is immediately changed. However, to ensure a full refresh of the data that you might have already accessed, it is recommended that you log out and log in again to guarantee a fully homogeneous user interface.

3.9 Changing your user profile

User profiles can represent different sets of menu items, screens, or even the look and feel of the application.

Generally, you have only one user profile for Triple'A Plus Web. If it is necessary for you to have more than one user profile, contact your System Administrator or IT Department to obtain multi-profiling access. This section explains how to change your user profile on the WUI when you have multi-profiling access.

To change your user profile

1. Click on the **Preferences** hyperlink/icon in the toolbar or in the contextual menu.
The **User Preferences** dialog box is displayed and split into the following tabs: **General** (default), **Security**, and **Personalization**.
2. In the Display section of **General** tab, select the preferred user profile from the drop-down list in the **Profile** field.
3. Click **Apply and Close** button.

3.10 Changing your password

You can change your password whenever you like through the WUI. To protect your security, your company might have certain rules for choosing and/or changing your passwords. If you cannot successfully change your password, contact your System Administrator or IT department.

To change your password

1. Click on the **Preferences** hyperlink/icon in the toolbar or in the contextual menu.
The **User Preferences** dialog box is displayed and split into the following tabs: **General** (default), **Security**, and **Personalization**.
2. In the Change Password section of the **Security** tab, do the following:
 - Enter your current password in the **Current Password** field.
 - Enter your new password in the **New Password** field.
 - Enter your new password again in the **Confirm Password** field.
3. Click **Apply and Close** button.

Note: It might take a short period of time (for example, 30 minutes) for your new password to take effect. Until you can use your new password, your old password will still be valid.

3.11 Changing the position of the menu

The WUI automatically displays the default position of the menu that was configured in the application. If a second position is available, you have the option to set the WUI to display this position. Note that this setting will be remembered as the default for your subsequent connections to the application.

Only a System Administrator or your IT Department can give the rights to access additional menu positions.

To change the position of the menu

1. Click on the **Preferences** hyperlink/icon in the toolbar or in the contextual menu.
 The **User Preferences** dialog box is displayed and split into the following tabs: **General** (default), **Security**, and **Personalization**.
2. In the Navigation section of the **Personalization** tab, select the preferred orientation of the menu from the drop-down list in the **Menu position** field.
3. Click **Apply and Close** button.

The position of the menu is immediately changed and remembered by the system next time you log into the WUI. However, to ensure a full refresh of the data that you might have already accessed, it is recommended that you log out and log in again to guarantee a fully homogeneous user interface.

3.12 Executing business functions

For performance reasons an **Execute** button and a **Refresh** button are provided for the running of business functions such as **Valuation**, **Future Cash Flow** etc.

- The **Execute** button instigates a check of the local cache. If it is positive, the results are retrieved from this local cache. If it is negative, a check of the global cache is executed. The Triple'A Plus Core function is executed only if no results have been retrieved in either the local cache or the global cache.
- The **Refresh** button executes the Triple' A Plus Core function without checking either the local cache and the global cache, regardless of whether results of an identical previous execution exist.

The behaviour of the **Execute** button is important for implementations of Triple'A Plus where certain predefined business functions are executed in batches. The retrieval of existing results will of course be much faster than if the full processing of the Triple'A Plus Core function had been instigated by the user during the working day. The **Refresh** button is provided in case there is the possibility of further operations since the time of the last execution of the Triple'A Plus Core function with an identical set of context parameters.

3.13 Saving business object in history

To provide quick access, the web user interface (WUI) keeps a history of the last 10 clients and portfolios that were recently accessed by the user.

- When you select a client to be used as the analysis scope, the system saves this client in the list of recent clients.
- When you select a single portfolio to be used as the analysis scope, the system saves this portfolio in the list of recent portfolios. A portfolio can also be added to the list of recent portfolios when you execute one of the following actions:
 - Select several portfolios to be used in context.
 - Pick a portfolio from a set of portfolios to analyse it individually.

- Create a single order on a portfolio.
- Create an order in a session or update the portfolio of an existing order in a session.
- Create, update, or view a proposal on a portfolio.
- View portfolio details in the Administration view.

3.14 Filtering retrieved results

When a table of retrieved results is displayed, you can choose to filter the results to obtain only the relevant ones for your analysis.

To filter the results in a table

1. Click the **Filter** icon at the top right corner of the table. (For more information about icons, see section [Icons, fields, and links.](#))

The **Filter** window is displayed letting you define the filter's criteria using drop-down list fields. You cannot use the main work area, toolbar, or menu bar when this window is displayed.

2. Define each filter's criterion, one per row:
 - In the first drop-down field of the row, select a criterion. The second drop-down field of the row becomes available.
 - In the second drop-down field of the row, select an operator (for more information, see section [Operators and values for filter criteria](#)). The third field of the row becomes available.
 - In the third field of the row, define a value. The definition can be text, date, number, percentage, Boolean, or enumeration (see section [Operators and values for filter criteria](#)).

Filter(s)			
1	Maturity	>=	Jul 21, 2011
2	Instrument	like	T_AI_CHF_NESN
3	Status	in	Confirmed, Accounted
4	Market Price	=	10000
5			
6			

3. (Optional) If you need more filter's criteria, click the **Add Row** icon (one additional criterion per click).
4. (Optional) If you want to reset a criterion, but not delete or remove it from display, click on its corresponding **Reset Criterion** icon. To cancel the filter, reset all filter's criterions.
5. Click **Ok** button.

The **Filter** window closes and the system applies the defined filter's criteria on the data in the table. Only the data matching all criteria are displayed. The top right corner of the table will indicate that a filter has been applied by displaying the message **Filter applied** at the left of the **Filter** icon.

3.14.1 Operators and values for filter criteria

The following operators and values can be used to define a filter's criterion. Their availability depends on the data type of the criterion.

Operator	Description	Data Type
<>	Value of column's data is strictly different from the value of the criterion. Differentiation between upper and lower case is valid for that operator.	Text Enumeration Boolean Date Number Percentage
=	Value of column's data is strictly equal to the value of the criterion. Differentiation between upper and lower case is valid for that operator.	Text Enumeration Boolean Date Number Percentage
>	Value of column's data is strictly greater than the value of the criterion. For an enumeration, the operator uses the numerical values instead of the textual values.	Enumeration Date Number Percentage
>=	Value of column's data is greater or equal to the value of the criterion. For an enumeration, the operator uses the numerical values instead of the textual values.	Enumeration Date Number Percentage
<	Value of column's data is strictly smaller than the value of the criterion. For an enumeration, the operator uses the numerical values instead of the textual values.	Enumeration Date Number Percentage
<=	Value of column's data is smaller or equal to the value of the criterion. For an enumeration, the operator uses the numerical values instead of the textual values.	Enumeration Date Number Percentage
is between	Value of column's data is defined between two values of the criterion. If the value of the column's data is equal to one of the criterion's values, the system will consider that the value of the column's data matches. If the first criterion's value is greater than the second criterion's value, then at filter execution, the system displays the following error message: <i>For operator between value1([first value]) must be greater than value([second value])</i>	Date Number Percentage
is not between	Value of column's data is not defined between two values of criterion. If the value of the column's data is equal to one of the criterion's values, the system will consider that the value of the column's data does not match. If the first criterion's value is greater than the second criterion's value, then at filter execution, the system displays the following error message: <i>For operator between value1([first value]) must be greater than value([second value])</i>	Date Number Percentage

Operator	Description	Data Type
is empty	Value of column's data is not defined (null).	Text Date Number Percentage
is not empty	Value of column's data is defined with a value.	Text Date Number Percentage
is like	The beginning of the value of column's data is equal to the value of the criterion. Differentiation between upper and lower cases is valid for that operator.	Text
is not like	Opposite of the <code>like</code> operator is retrieved. Differentiation between upper and lower cases is valid for that operator.	Text
contains	The value of the column's data contains the value of the criterion. Differentiation between upper and lower cases is valid for that operator.	Text
does not contain	Opposite of the <code>contains</code> operator is retrieved. Differentiation between upper and lower cases is valid for that operator.	Text
begins with	The beginning of the value of column's data is equal to the value of the criterion. Differentiation between upper and lower cases is valid for that operator.	Text
ends with	The ending of the value of column's data is equal to the value of the criterion. Differentiation between upper and lower cases is valid for that operator.	Text
is included in	The value of the column's data is strictly equal to one of the values of the criterion. The different values must be separated by a comma. If no values are defined and the filter was executed, then it is not applied and all its criteria are reset. Differentiation between upper and lower cases is valid for that operator	Text Enumeration
is excluded from	The value of the column's data is strictly different than one of the values of the criterion. The different values must be separated by a comma. If no values are defined and the filter was executed, then it is not applied and all its criteria are reset. Differentiation between upper and lower cases is valid for that operator.	Text Enumeration

3.15 Showing levels of a tree view of a specific branch

When a table of retrieved results is displayed in a tree view, you can choose the levels of the tree view to display. Your chosen display cannot be saved and stored as a preference, which means that your selection is not applied every time you log in.

To show the levels of a tree view of a specific branch, the **Row Selector** icon (see section [Icons, fields, and links](#)) must be displayed at the top right corner of the table. This display can be configured for each table, but if the same table is used in several screens, only one preference is kept for all its occurrences.

The **Row Selector** icon is not displayed at all if the table does not display a tree view with at least two levels.

To show the levels of a tree view of a specific branch

1. Click the **Row Selector** icon at the top right corner of the table.
The **Row Selector** window is displayed
2. Define the levels to show by selecting one of the following options below:
 - Show only first level: Only the first level of the tree view is displayed. Upper levels [1+m] are hidden.
 - Show [n] levels: All levels until level [n] (inclusive) of the tree view are displayed. Upper levels [n+m] are hidden.
 - Show all levels: All levels of the tree view are displayed.

The table's display automatically adapts to your choice.

Note: There are as many options Show [n] levels as there are branch levels.

3. After you are finished with your selection, click on the **Close** icon of the **Row Selector** window.
The **Row Selector** window is closed (without storing your selection as a preference).

3.16 Showing and hiding columns

When a table of retrieved results is displayed, you can choose to show more columns or to hide displayed ones. Your chosen display can be saved and stored as a preference, which means that your saved display is always applied every time you log in. You can only show columns that are already available for the table; you cannot create a column to display.

To be able to show or hide columns, the **Column Selector** icon (see section [Icons, fields, and links](#)) must be displayed at the top right corner of the table. This display can be configured for each table, but if the same table is used in several screens, only one preference is kept for all its occurrences.

The **Column Selector** icon is not displayed at all if the table includes three or fewer columns (including ones that are by default hidden).

To show or hide columns in a table

1. Click the **Column Selector** icon at the top right corner of the table.
The **Column Selector** window is displayed
Note: If no changes (compared to the default columns display) were made and saved, the **Default** button is not enabled.
2. Define the columns to show or hide:
 - Check the columns to show.
 - Uncheck the columns to hide.
 The table's display automatically adapts to your choice.
Note: Some columns are displayed with different background colours and their checkboxes are ticked but not available for you to change. These are locked columns and cannot be hidden from the display.
3. Do one of the following:

- Click **Save** to save your selections. If your selections are not saved, the **Column Selector** icon in yellow colour is displayed at the top right corner of the table. Clicking the **Save** button will also close the **Column Selector** window and display the **Column Selector** icon in blue colour at the top right corner of the table to indicate a change (compared to the default display). Your saved selections will always be applied every time you log in until you save another selection or use the **Default** button to return to the default display.

Note: If you decide to close the **Column Selector** window by clicking the **Close** icon rather than clicking the **Save** button, then your current selection will not be saved.
- Click **Discard** button to return to your previously saved columns display. Clicking **Discard** will not close the **Column Selector** window. The icon at the top right corner of the table can be the **Column Selector** icon in grey colour (which indicates that the last saved columns display is the default display) or in blue colour (which indicates that the last saved columns display is not the default display).

3.17 Changing the columns display order

When a table of retrieved results is displayed, you can choose to change the order of the columns to display in the table. Your chosen display can be saved and stored as a preference, which means that your saved display is always applied every time you log in.

To be able to change the column's display order, the **Column Selector** icon (see section [Icons, fields, and links](#)) must be displayed at the top right corner of the table. This display can be configured for each table, but if the same table is used in several screens, only one preference is kept for all its occurrences.

The **Column Selector** icon is not displayed at all if the table includes three or fewer columns (including ones that are by default hidden).

To change columns display order in a table

1. Click the **Column Selector** icon at the top right corner of the table.

The **Column Selector** window is displayed.

Note: If no changes (compared to the default columns display) were made and saved, the **Default** button is not enabled.

2. Drag-and-drop the columns to their new positions.

The table's display automatically adapts to your choice.

Note: Some columns are displayed with different background colours and cannot be moved. These columns are locked and cannot be moved.

3. Do one of the following:

- Click **Save** to save your selections. If your selections are not saved, the **Column Selector** icon in yellow colour is displayed at the top right corner of the table. Clicking the **Save** button will also close the **Column Selector** window and display the **Column Selector** icon in blue colour at the top right corner of the table to indicate a change (compared to the default colour display). Your saved selections will always be applied every time you log in until you save another selection or use the **Default** button to return to the default display.

Note: If you decide to close the **Column Selector** window by clicking the **Close** icon rather than clicking the **Save** button, then your current selection will not be saved.
- Click **Discard** button to return to your previously saved columns display. Clicking **Discard** will not close the **Column Selector** window. The icon at the top right corner of the table can be the **Column Selector** icon in grey colour (which indicates that the last saved columns display is the default display) or in blue colour (which indicates that the last saved columns display is not the default display).

3.18 Sorting displayed results

When a table of retrieved results is displayed, you can choose to sort the displayed data in ascending (from smallest to the highest value) or descending (from highest to the smallest value) order. The rank of a character string is based on the collation order of its letters.

The sorting of data in a table can be executed through two methods. The first method is direct access to the column to use for the sorting definition. The second method involves the use of the **Column Selector** icon (see section [Icons, fields, and links](#)) displayed at the top right corner of the table.

The **Column Selector** icon is not displayed at all if the table includes three or fewer columns (including ones that are by default hidden).

The advantage of the second method is that your sorted display can be saved and stored as a preference, which means that your sorted display will always be applied every time you log in. With the first method, you will lose your sorting definition every time the screen is reloaded and you are automatically returned to the default display.

To be able to sort the data using the second method, the **Column Selector** icon must be displayed at the top right corner of the table. This display can be configured for each table, but if the same table is used in several screens, only one preference is kept for all its occurrences.

First method: To sort displayed results in a table (directly in the table)

Selecting a column to sort will cancel the previous sorting choice made in another column.

To sort the data, click on the column header of the column you want to sort. You might need to click several times on the column header until the desired sorting order is displayed (ascending indicated by display of the **Ascending** icon in the column header or descending indicated by display of the **Descending** icon in the column header).

Second method: To sort displayed results in a table (using the Column Selector window)

1. Click the **Column Selector** icon at the top right corner of the table.

The **Column Selector** window is displayed.

Note: If no changes (compared to the default columns display) were made and saved, the **Default** button is not enabled.

2. Click the **Sort** icon, or the Sort Ascending or the Sort Descending icon next to a column to define its sort order. The icon will change cyclically from the **Sort** icon (which means no sorting) to the **Sort Ascending** icon and to the **Sort Descending** icon.

The table's display does not automatically adapt to your choice until you save your sorting. Columns not selected for display can also be used for sorting.

3. Do one of the following:

- Click **Save** to save your selections. If your selections are not saved, the **Column Selector** icon in yellow colour is displayed at the top right corner of the table. Clicking the **Save** button will also close the **Column Selector** window and display the **Column Selector** icon in blue colour at the top right corner of the table to indicate a change (compared to the default colour display). Your saved selections will always be applied every time you log in until you save another selection or use the **Default** button to return to the default display.

Note: If you decide to close the Column Selector window by clicking the **Close** icon rather than clicking the Save button, then your current selection will not be saved.

- Click **Discard** button to return to your previously saved columns display. Clicking **Discard** will not close the **Column Selector** window. The icon at the top right corner of the table can be the **Column Selector** icon in grey colour (which indicates that

the last saved columns display is the default display) or in blue colour (which indicates that the last saved columns display is not the default display).

3.19 Hiding and showing sections

The main work area is composed of different sections, each containing dedicated information and actions. You can choose to hide or show any number of sections at any time.

To hide a section:

At the top right corner of a section, click on the **Hide** icon (see section [Icons, fields, and links](#)). The contents of the section are hidden and only its title is displayed. A hidden section remains hidden every time you log in until you choose to show it.

To show a section:

At the top right corner of a hidden section, click on the **Show** icon. The contents of the section are displayed. A shown section remains opened every time you log in until you choose to close it.

3.20 Maximizing size of sections

A section can be maximized so that you can see more of the contents of the section, and fill the entire window without the other sections, toolbar, menu bar, tabs, and notification indicator.

To maximize a section, click on the **Maximize** icon (see section [Icons, fields, and links](#)) at the top right corner of the table. The section title and content are displayed in the entire window and nothing else is displayed. To restore the section to its normal size, click the **Minimize** icon.

3.21 Enabling Contextual Menu

The Contextual Menu feature allows you to access a set of actions when clicking the right mouse button. The set of actions will vary depending on where the cursor is located on the screen when the right mouse button is clicked. These actions are linked to the icons and buttons that are present in the portion of screen where the cursor of the mouse is located. When double-clicking on a line, the first action that is defined in the contextual menu is executed.

This feature is currently enabled by default only in the Relationship Manager Profile. Details on how to activate and configure these features can be found in the *Triple'A Plus Advanced Customisation Guide*.

Positions

3.22 Using Keyboard Shortcuts

Keyboard Shortcuts feature allow you to directly access a specific screen just as if you had clicked on the respective entry in the global menu.

3.23 Text formatting in free text fields

You can use the formatting toolbar located above some free text fields to edit text directly in the field (e.g., changing font size, adding bullet points). The following image shows a free text field with the formatting toolbar:

It is possible to import formatted text directly from a text editor like Microsoft Word for example, using *copy-paste*. This method, however, is not recommended as hidden formatting elements from the source document can be carried over and increase database memory consumption, which might result in the loss of some text that you had expected to save.

If text must be imported from a text editor, it is recommended that the text is cleaned after it has been pasted into the free text field, and then reformatted using the formatting toolbar. To clear the text, select it all (by pressing <Ctrl> and <A> on your keyboard) and click on the **Delete** icon (see section [Icons, fields, and links](#)).

3.24 Displaying TSL logs

For each Triple'A Service Layer (TSL) financial result, financial execution logs are available. By default, the TSL logs are enabled.

To display the logs

1. On a financial result sections, click the **Logs** icon (see section [Icons, fields, and links](#)) at the top right corner of the section.
A dialog box is displayed.
2. (Optional) Select how you want to sort and/or filter the information to display.

4 Tabs, menus, commands, and subcommands

This chapter describes the available functions and their entry points provided by the Triple'A Plus Web solution. Some of the tabs, commands, and subcommands may be subject to user access rights and additional conditions such as profiles and licences of the implemented system and are therefore, not always available to you.

Tab	Menu	Command	Subcommand	Description
Portfolio Analysis				Gives access to financial analysis and ordering tools on portfolios related to the bank's clients. Complete description can be found in the current document and the <i>Triple'A Plus Web Packaging Guide</i> .
	Home			Default menu of the Portfolio Analysis tab. Gives access to the dashboard and pre-defined queries on portfolios and clients.
		Dashboard		Default command of the Home menu. Displays the dashboard of portfolios and clients.
		Notifications & Messages		Gives access to Notifications & Messages related functions.
			Notifications & Messages	Displays the notifications and messages sent to the connected user, as well as the user's sent and draft messages.
			New Message	Gives access to the creation of a new message.
		Pre-Defined Queries		Displays the pre-defined queries on portfolios and clients.
		Alerts		Gives access to alert-related functions.
			Private Alerts	Gives access to the list of private alerts and lets the user create a new private alert.
			Public Alerts	Gives access to the list of public alerts and lets the user create a new public alert.
	Analysis			Gives access to all functions dedicated to portfolio analysis.
		Identification		Default command of the Analysis menu. Displays the identification of the business object defined in the context.
		Valuation		Displays the valuation of the business object defined in the context.
		Held Assets		Displays a list of assets held by the business object defined in the context.
		Return		Displays the return of the business object defined in the context.

Tab	Menu	Command	Subcommand	Description
		Performance		Gives access to information related to the performance of the business object defined in the context.
			Global	Default sub-command of the Performance command. Displays the performance overview of the business object defined in the context.
			Risk Measures	Displays the risk measures (ex-post) of the business object defined in the context.
			Contribution	Displays the performance contribution of the business object defined in the context.
			Attribution	Displays the performance attribution of the business object defined in the context.
			Intermediate Benchmark Performance Attribution	Displays the intermediate benchmark performance attribution of the business object defined in the context.
		Future Cash Flow		Displays the expected and foreseen cash-flows of the business object defined in the context.
		Compliance Checking		Displays the compliance of the business object defined in the context, according to its related strategies' objectives, and constraints.
		Portfolio Risk		Executes the risk module on the business object defined in the context.
		Reporting		Gives access to reports and their generation on the business object defined in the context.
			Create Report	Default sub-command of the Reporting command. Generates report(s) based on the business object defined in the context.
			Existing Report(s)	Searches and views existing generated reports.
	Order Management			Gives access to all ordering functions and tools to manage orders and order sessions.
		Create Single Order		Gives access to creation of a single order.
			Security	Default sub-command of the Create Single Order command. Creates a single order for a portfolio, based on a tradable financial instrument (such as stock, bond, etc).
			Derivative	Creates a single order on a derivative instrument (futures and options) for a portfolio.
			Forex	Creates a Forex transaction for a portfolio.

Tab	Menu	Command	Subcommand	Description
			Deposit	Creates a new deposit for a portfolio.
			Loan	Creates a new loan for a portfolio.
		Allocate Order		Generates orders on portfolios, by dispatching per portfolio a given quantity of a tradable financial instrument.
		Rebalancing		Generates orders on portfolios to realign their positions according to their rebalancing strategy objectives and constraints.
		Order Session		Gives access to creation of multiple orders.
			Create Session	Default sub-command of the Order Session command. Creates several orders for different portfolios in one order session.
			Existing Session(s)	Searches existing generated order sessions to view, modify, or delete them (actions depend of the session's status).
		Order Lists		Default command of the Order Management menu. Gives access to all orders in which the user has access rights.
			All Orders	Default sub-command of the Order Lists command. Displays all orders in which the user has access rights.
			Orders to Validate	Displays all orders in which the user has validation rights.
			Cancellable Orders	Displays all orders that can be cancelled and in which the user has cancellation rights.
	Proposal Generator			Gives access to the generation of order proposals in portfolios, plus the possibility to use them afterwards to send proposed orders.
		Create Proposal		Default command of the Proposal Generator menu. Creates an order proposal for a portfolio.
		Existing Proposal(s)		Searches existing generated order proposals to view, copy, modify, or delete them (actions depend of the proposal's status).
	Administration			Gives access to the administration of data related to business objects, such as portfolios and strategies.
		Portfolio		Gives access to the administration of data related to portfolios.

Tab	Menu	Command	Subcommand	Description
		Strategy		Give access to the administration of data related to strategies.
Client Data				Gives access to client data tools to manage them. Complete description can be found in the <i>Triple'A Plus Web Client Data Management User Guide</i> .
	Search All			Gives access to searching tool. Default menu of the Client Data tab.
		Search All		Default command of the Search All menu. Searches existing client relationships, persons, and group relationships.
		Client Relationship		Searches existing client relationships.
		Person		Searches existing persons.
		Group Relationship		Searches existing group relationships.
	Client Relationship			Gives access to data management on client relationships.
		Search		Default command of the Client Relationship menu. Searches existing client relationships.
		Overview		Only available if a client relationship is selected. Gives access to standard data, tasks and contacts related to the selected client relationship (see <i>Triple'A Plus Web Task and Contact Management User Guide</i>).
			Standing Data	Only available if a client relationship is selected. Default sub-command of the Overview command. Displays an overview of the standard data of the selected client relationship.
			Task and Contact	Only available if a client relationship is selected. Displays active tasks and contacts related to the selected client relationship (see <i>Triple'A Plus Web Task and Contact Management User Guide</i>).
		Task History		Only available if a client relationship is selected. Displays the task's history related to the selected client relationship (see <i>Triple'A Plus Web Task and Contact Management User Guide</i>).

Tab	Menu	Command	Subcommand	Description
		Contact History		Only available if a client relationship is selected. Displays the contact's history related to the selected client relationship (see <i>Triple'A Plus Web Task and Contact Management User Guide</i>).
		Standing Data		Only available if a client relationship is selected. Displays all standard data of the selected client relationship with the possibility to edit them (depending on the user's rights).
		Client Relationship Details		Only available if a client relationship is selected. Default sub-command of the Standing Data command. Displays details of the selected client relationship with the possibility to edit them (depending on the user's rights).
		Participants		Only available if a client relationship is selected. Displays participants related to the selected client relationship with the possibility to edit them or to add new ones (depending on the user's rights).
		Services		Only available if a client relationship is selected. Displays services related to the selected client relationship with the possibility to edit them or to add new ones (depending on the user's rights).
		Profile		Only available if a client relationship is selected. Displays all profiles of the selected client relationship with the possibility to edit them (depending on the user's rights).
		Opening		Only available if a client relationship is selected. Default sub-command of the Profile command. Displays the opening profile (data requested to open a client relationship) of the selected client relationship with the possibility to edit it (depending on the user's rights).
		Financial		Only available if a client relationship is selected. Displays the financial profile (data related to a financial situation) of the selected client relationship with the possibility to edit it (depending on the user's rights).
		Marketing		Only available if a client relationship is selected. Displays the marketing profile (data for marketing's use) of the selected client relationship with the possibility to edit it (depending on the user's rights).

Tab	Menu	Command	Subcommand	Description
			Risk	Only available if a client relationship is selected. Displays the risk profile (data related to risks) of the selected client relationship with the possibility to edit it (depending on the user's rights).
		Relationships		Only available if a client relationship is selected. Displays all relationships related to the selected client relationship with the possibility to edit them (depending on the user's rights).
			Group Relationships	Only available if a client relationship is selected. Default sub-command of the Relationships command. Displays all group relationships in which the selected client relationship belongs.
			Direct Relationships	Only available if a client relationship is selected. Displays all direct relationships related to the selected client relationship with the possibility to edit them (depending on the user's rights).
		Opening Process		Only available if a client relationship is selected. Gives access to initiation of processes (workflows) on the selected client relationship.
			Perform financial profiling	Only available if a client relationship is selected. Initiates a process to capture all data related to the financial situation of the selected client relationship.
			Perform data gathering	Only available if a client relationship is selected. Initiates a process to capture all standing data related to the selected client relationship.
			Define accounts	Only available if a client relationship is selected. Initiates a process to create new accounts on the selected client relationship.
			Perform opening profiling	Only available if a client relationship is selected. Initiates a process to capture all mandatory data for an opening for the selected client relationship.
			Start an opening request	Only available if a client relationship is selected. Default sub-command of the Opening Process command. Initiates a process to open the selected client relationship.
		Process History		Displays active and completed processes (workflows).

Tab	Menu	Command	Subcommand	Description
		Create Task		Creates a single task (see <i>Triple'A Plus Web Task and Contact Management User Guide</i>).
		Create Contact		Creates a contact (see <i>Triple'A Plus Web Task and Contact Management User Guide</i>).
		Create Client Relationship		Creates a new client relationship with a few details.
	Person			Gives access to data management on persons.
		Search		Default command of the Person menu. Searches existing persons.
		Overview		Only available if a person is selected. Gives access to standard data, tasks and contacts related to the selected person (see <i>Triple'A Plus Web Task and Contact Management User Guide</i>).
			Standing Data	Only available if a person is selected. Default sub-command of the Overview command. Displays an overview of the standard data of the selected person.
			Task and Contact	Only available if a person is selected. Displays active tasks and contacts related to the selected person (see <i>Triple'A Plus Web Task and Contact Management User Guide</i>).
		Task History		Only available if a person is selected. Displays the task's history related to the selected person (see <i>Triple'A Plus Web Task and Contact Management User Guide</i>).
		Contact History		Only available if a person is selected. Displays the contact's history related to the selected person (see <i>Triple'A Plus Web Task and Contact Management User Guide</i>).
		Standing Data		Only available if a person is selected. Displays all standard data of the selected person with the possibility to edit them (depending on the user's rights).

Tab	Menu	Command	Subcommand	Description
			Person Details	Only available if a person is selected. Default sub-command of the Standing Data command. Displays details of the selected person with the possibility to edit them (depending on the user's rights).
			Person Identity	Only available if a physical person is selected. Displays nationality data related to the selected person with the possibility to edit them or to add new ones (depending on the user's rights).
			Participations	Only available if a person is selected. Displays client relationships in which the selected person participates.
			Person Profile	Only available if a person is selected. Displays the profile related to the selected person with the possibility to edit them or to add new ones (depending on the user's rights).
		Profile		Only available if a person is selected. Displays all profiles of the selected person with the possibility to edit them (depending on the user's rights).
			Financial	Only available if a person is selected. Displays the financial profile (data related to financial situation) of the selected person with the possibility to edit it (depending on the user's rights).
			Marketing	Only available if a person is selected. Displays the marketing profile (data for marketing use) of the selected person with the possibility to edit it (depending on the user's rights).
			Risk	Only available if a person is selected. Displays the risk profile (data related to risks) of the selected person with the possibility to edit it (depending on the user's rights).
		Relationships		Only available if a person is selected. Displays all relationships related to the selected person with the possibility to edit them (depending on the user's rights).
			Group Relationships	Only available if a person is selected Default sub-command of the Relationships command Displays all group relationships in which the selected person belongs.

Tab	Menu	Command	Subcommand	Description
			Direct Relationships	Only available if a person is selected. Displays all direct relationships related to the selected person with the possibility to edit them (depending on the user's rights)
		Create Task		Creates a single task (see <i>Triple'A Plus Web Task and Contact Management User Guide</i>).
		Create Contact		Creates a contact (see <i>Triple'A Plus Web Task and Contact Management User Guide</i>).
		Create Corporate Prospect		Creates a new prospect based on a legal person.
		Create Physical Prospect		Creates a new prospect based on a physical person.
	Group Relationship			Gives access to data management on group relationships.
		Search		Default command of the Group Relationship menu. Searches existing group relationships.
		Standing Data		Only available if a group relationship is selected. Displays all standard data of the selected group relationship with the possibility to edit them (depending on the user's rights).
			Group Relationship Details	Only available if a group relationship is selected. Default sub-command of the Group Relationship Details command. Displays details of the selected group relationship with the possibility to edit them (depending on the user's rights).
			Included CDM Entities	Only available if a group relationship is selected. Displays client relationships and persons included in the selected group relationship with the possibility to remove them or add new ones (depending on the user's rights).
		Create Group Relationship		Creates a new empty group relationship.
	Workflows			Gives access to all activities (work items) in which the user can work to achieve related initiated processes.

Tab	Menu	Command	Subcommand	Description
		Work item List		Default command of the Workflow menu. Displays all activities (work items) assigned directly to the user or to a group in which the user belongs.
	Monitoring			Gives access to monitoring tools on processes.
		My Processes		Default command of the Monitoring menu. Gives access to all processes (workflows) initiated by the user or in which the user participates.
			My Launched Processes	Default sub-command of the My Processes command. Displays all processes initiated by the user.
			My Participating Processes	Displays all processes in which the user currently participates or has participated.
Tasks & Contacts				Gives access to tasks, contacts management and notifications tools on portfolios and bank's clients. Complete description can be found in the <i>Triple'A Plus Web Task and Contact Management User Guide</i> .
	Tasks			Default menu of the Tasks & Contacts tab. Gives access to the history of the tasks and the possibility to create new ones.
		Task History		Default command of the Tasks menu. Gives access to the history of the tasks.
			My own Tasks	Default sub-command of the Task History command. Displays tasks assigned to the user (by the user or by somebody else).
			My assigned Tasks	Displays tasks which were assigned by the user.
			My clients Tasks	Displays single tasks related to the user's clients.
			My group Tasks	Displays single tasks related to the clients related to user's groups.
			Task Bin	Displays delete tasks.
			Create Task	
		Assign Task		Creates a new assigned task.

Tab	Menu	Command	Subcommand	Description
	Contacts			Gives access to the history of the contacts and the possibility to create new ones.
		Contact History		Default command of the Contacts menu. Gives access to the history of the contacts.
			My Contacts	Default sub-command of the Contact History command. Displays contacts created by the user.
			My clients Contacts	Displays contacts related to the user's clients.
			My group Contacts	Displays contacts related to the clients related to the user's groups.
		Create Contact		Creates a new contact.
Monitoring				Gives access to monitoring tools. Complete description can be found in the <i>Triple'A Plus Web Monitoring User Guide</i> .
	Daily Outlook			Default menu of the Monitoring tab. Gives access to daily tasks, activities (work items), and notifications.
		Today's Events		Default command of the Daily Outlook menu. Displays newly received notifications, new tasks, and all activities (work items) assigned directly to the user or to a group in which the user belongs.
		My Activities		Displays overdue and short-term tasks and all activities (work items) assigned directly to the user or to a group in which the user belongs.
		Notification History		Displays all notifications sent to the user.
	Alerts			Give access to the administration of private and public alerts.
		Private Alerts		Displays all private alerts defined by the user with the possibility to update, delete, or execute them. It is also possible to define new private alerts.
		Public Alerts		Displays all public alerts defined by the user with the possibility to update, delete, or execute them. It is also possible to define new public alerts and to subscribe to an existing one.
	Monitoring			Gives access to monitoring tools on processes.

Tab	Menu	Command	Subcommand	Description
		My Processes		Default command of the Monitoring menu. Gives access to all processes (workflows) initiated by the user or in which the user participates.
			Launched Processes	Default sub-command of the My Processes command. Displays all processes initiated by the user.
			Participating Processes	Displays all processes in which the user currently participates or has participated.

5 Searching tool

In the **Portfolio Analysis** tab of the Triple'A Plus Web solution, a search tool is available to search for business objects. The search is performed using fields (known as search fields) with the **Search** icon or **Advanced Search** icon displayed. The latter icon provides an auto-complete form. For detailed information about the icons, see section [Icons, fields, and links](#).

Results of the searches are displayed only if they match all search criteria (including hidden search criteria).

Before you can use the searching tool (including the auto-complete form) on any business object, the computation of pre-computed data (refer to the *Triple'A Plus Web Packaging Reference Guide* and *Triple'A Plus Web TSL Operating Guide*) must be executed first.

The searching tool can be used to search for a business object in a variety of ways, such as:

- [Searching a business object with Search or Advanced Search icon](#)
- [Searching a business object with <Enter> key or <Tab> key](#)
- [Searching a business object with auto-complete form](#)
- [Searching a business object within history list](#)

5.1 Searching a business object with Search or Advanced Search icon

1. In the search field, do one of the following:
 - Type text, if permitted, related to the business object. The wildcard character "*" can be used. Then, click the **Search** or **Advanced Search**.
 - Immediately click the **Search** or **Advanced Search** icon.

A search screen is displayed with pre-defined search criteria, and if text was entered in the search field, the criteria related directly to the search field's text is also displayed. A pre-defined criterion is a criterion automatically added as soon as the icon is clicked. It can be hidden, displayed with the possibility to edit it afterwards, or displayed without the possibility to edit it afterwards.

If all criteria (pre-defined criteria and criteria related to the search field's text) were completely defined, the matching results are displayed and are available for selection.

Note: Details about available operators, criteria, pre-defined criteria and criteria related to search field's text are available in the *Triple'A Plus Web Packaging Reference Guide*.

2. If no results are displayed or you want to modify your search, you can complete, reset (but not removed from display), or modify the displayed criteria or add new criteria. A criterion is defined by a business object's attribute, an operator, and value(s). For more information about attributes, operators, and values, refer to the *Triple'A Plus Web Packaging Reference Guide*.
 - To reset a criterion, click on its corresponding **Reset Criterion** icon.
 - To add a new criterion, click the **Add** icon.
3. Click **Search** button.

Matching search results are displayed and available for selection.

By default, the system applies a limit (N) in the number of displayed matching results. If this limit is reached, the system displays the message "Found [n] Records, only the [N] first are displayed". This limit can be removed by checking the option **No limitations on the number of displayed results**. You will need to start a new search with the **Search** button.

Note:

If a search criterion is based on any business object (e.g., portfolio, portfolio list, client, manager, advisor, instrument, instrument list, strategy, grid, currency, type, issuer,

market, user, country, business unit, language, market segment) that uses foreign key attributes as search criteria and with:

- the operator "=", then the criterion's value can be defined through a search tool available in a pop-up box. But this possibility is limited to only one level and not more because it is not possible to use a search tool to define a search criterion's value that is used to define a search criterion's value to search a business object.
 - the operator "is included in" or "is excluded from", then the criterion's value can be defined through a multi-select search tool available in a pop-up box. The search results can be checked/unchecked in order to add them to the selected records table and to submit them once the final selection validated, unless some records have to be removed from the selection via the **Delete** icon (for information about icons, see section [Icons, fields, and links](#)).
4. Select the result to be used for setting the search field by clicking on the result's code in the Code column (or name in the Name column if the business object is a market segment).

The search field is set with the result you selected.

5.2 Searching a business object with <Enter> key or <Tab> key

1. Type a text, if permitted, into the search field. The wildcard character "*" can be used and text is not mandatory.
2. Press the <Enter> or <Tab> key on your keyboard.

If only one result is found that exactly matches the pre-defined search criteria and the criteria related directly to the search field's text, then the search field is automatically set with this result.

Otherwise, a search screen is displayed with pre-defined search criteria and also the criteria related directly to the search field's text. A pre-defined criterion is a criterion automatically added as soon as the icon is clicked. It can be hidden, displayed with the possibility to edit it afterwards, or displayed without the possibility to edit it afterwards.

If all criteria (pre-defined criteria and criteria related to the search field's text) were completely defined, the matching results are displayed and are available for selection.

Note: Details about available operators, criteria, pre-defined criteria and criteria related to search field's text are available in the *Triple'A Plus Web Packaging Reference Guide*.

3. If no results are displayed or you want to modify your search, you can complete, reset (but not removed from display), or modify the displayed criteria or add new criteria. A criterion is defined by a business object's attribute, an operator, and value(s). For more information about attributes, operators, and values, refer to the Triple'A Plus Web Packaging Reference Guide.
 - To reset a criterion, click on its corresponding **Reset Criterion** icon.
 - To add a new criterion, click the **Add** icon.
4. Click **Search** button.

Matching search results are displayed and available for selection.

By default, the system applies a limit (N) in the number of displayed matching results. If this limit is reached, the system displays the message "Found [n] Records, only the [N] first are displayed". This limit can be removed by checking the option **No limitations on the number of displayed results**. You will need to start a new search with the **Search** button.

Note:

If a search criterion is based on any business object (e.g., portfolio, portfolio list, client, manager, advisor, instrument, instrument list, strategy, grid, currency, type, issuer,

market, user, country, business unit, language, market segment) that uses foreign key attributes as search criteria and:

- with the operator "=", then the criterion's value can be defined through a search tool available in a pop-up box. But this possibility is limited to only one level and not more because it is not possible to use a search tool to define a search criterion's value that is used to define a search criterion's value to search a business object.
 - with the operator "is included in" or "is excluded from", then the criterion's value can be defined through a multi-select search tool available in a pop-up box. The search results can be checked/unchecked in order to add them to the selected records table and to submit them once the final selection validated, unless some records have to be removed from the selection via the **Delete** icon (for information about icons, see section [Icons, fields, and links](#)).
5. Select the result to be used for setting the search field by clicking on the result's code in the Code column (or name in the Name column if the business object is a market segment).

The search field is set with the result you selected.

5.3 Searching a business object with auto-complete form

1. In the search field that contains the **Advanced Search** icon, type text related to the business object. The wildcard character "*" can be used.

The system looks for results matching the pre-defined criteria and the criteria related directly to the search field's text. A pre-defined criterion is a criterion automatically added by the system. The pre-defined criteria and criteria related directly to the search field's text are exactly the same as those used to search the business object with the **Search** icon, the <Enter> key or the <Tab> key (for more details, see sections [Searching a business object with Search or Advanced Search icon](#) and [Searching a business object with <Enter> key or <Tab> key](#)).

If no matching results are found as you type the text, the **Advanced Search** icon turns red

Matching search results are displayed in the auto-complete form below the search field and available for selection. For more information about the layout and details of the auto-complete form, refer to the *Triple'A Plus Web Packaging Reference Guide*.

2. Select the result to be used for setting the search field by clicking on the result (or using the <Up Arrow> and <Down Arrow> keys on your keyboard until the result is highlighted and then press the <Enter> key).

The search field is set with the result you selected.

5.4 Searching a business object within history list

1. Click on the **History** icon displayed next to the **Search** icon.

The system displays the history of accessed business objects similar to the list displayed by the auto-complete feature. If no object has yet been accessed, the history will be empty.

2. Select the object to be used for setting the search field by clicking on the item (or using the <Up Arrow> and <Down Arrow> keys on your keyboard until the result is highlighted and then, pressing the <Enter> key).

The search field is set with the object you selected.

6 Display of static data

The sections in this chapter provide you with basic information about the static data that is displayed in the following screens:

- [Portfolio Details](#)
- [Client Details](#)
- [Instrument Details](#)
- [Operation Details](#)

6.1 Portfolio Details

The **Portfolio Details** screen is used to view all the definitions of a portfolio. This screen can be viewed from the results of a function showing a reference to a portfolio.

The following sections provide information about the **Portfolio Details** screen:

- [Common data](#)
- [Portfolio Details screen tabs](#)

6.1.1 Common data

Common information displayed on all the **Portfolio Details** screens includes the following:

- [Identification](#)
- [Nature & Type](#)
- [Owner & Manager](#)

6.1.1.1 Identification

The **Identification** section shows the main attribute identifiers for a portfolio.

Field name	Description
Code	Unique business identifier of the portfolio.
Name	Portfolio name.
Denomination	Portfolio denomination.

6.1.1.2 Nature & Type

The **Nature & Type** section shows the main attributes that identify the nature and type of the portfolio.

Field name	Description
Nature	Specifies the nature of the portfolio.
Type	Reference to the type of the portfolio.
Currency	Reference to the currency of the portfolio.
Service Type	Specifies whether a portfolio is 'Discretionary', 'Advisory', 'Execution only', or 'Other'.
Management Type	Management type.
Management Begin Date	Management begin date.
Status	Specifies the status of the portfolio

Field name	Description
Active	Specifies whether the portfolio is active or not.

6.1.1.3 Owner & Manager

The **Owner & Manager** section shows the main attributes that identify the owner and manager of the portfolio.

Field name	Description
Client	Reference to a third-party customer who is the owner of the portfolio.
Parent Portfolio	Reference to the parent portfolio.
Main Business Entity	Specifies the portfolio's main business entity.
Manager	Specifies the managers or groups of managers who are in charge of the portfolios and clients.
Advisor	Specifies the name of the advisor who is in charge of the portfolios

6.1.2 Portfolio Details screen tabs

The following tabs are available on the **Portfolio Details** screen:

- [Details tab](#)
- [Dashboard tab](#)
- [Notepad tab](#)
- [Business Entities tab](#)

6.1.2.1 Details tab

The **Details** tab displays the main attributes relative to the setting for a portfolio.

Field name	Description
Settings	
Fusion Rule	Specifies the basis on which the positions and balance positions are merged and closed.
Negative Cash	Specifies whether the portfolio must end up with positive global cash after automatic orders.
Language	Specifies the unique identifier of a language.
Market	Non-physical field. Holds the computed total market value of a portfolio in the financial functions that requires a valuation.
Last Rebalancing Date	Defines the last date that the portfolio was rebalanced.
Last Tolerance Date	Defines the last date in which the system generates a warning message instead of an error message.
Tax Status	Specifies the status of the portfolio with respect to withholding tax.
FT Convention	Specifies the occurrences of FT Convention.

6.1.2.2 Dashboard tab

The **Dashboard** tab shows the overall information of a portfolio.

Field name	Description
Valuation	

Field name	Description
Market Value (Ptf.Ccy.)	Specifies the portfolio's market value expressed in the portfolio currency.
Market Value Variation (in %)	Specifies the variation, in percentages, between the portfolio's current market value and its market value one year ago, related to the market value one year ago.
Portfolio P&L (in %)	Specifies the difference between the market value and the cost value of the portfolio, expressed as a percentage of the cost value.
Position History From Date	Specifies the position history "from date" for the portfolio.
Position History Till Date	Specifies the position history "till date" for the portfolio.
Minimum Bond Rating (S&P)	Specifies the minimal rating, in Standard & Poor's (S&P) classification, between all rated instruments held in the portfolio.
Liquidity - Net Capital Ratio (Net Cash Debtor)	Specifies the percentage of positive cash balances, related to the portfolio's current market value, less the advances in cash.
Fixed Income Next Redemption (in days)	Specifies the number of days between the current date and the next redemption.
Compliance	
Objective Compliance	Indicates whether the portfolio's positions are compliant with the investment structure used for rebalancing.
Constraints Compliance	Indicates whether the existing constraints, defined on the portfolio, are compliant.
Strategy Deviation (in %)	Indicates the medium values of all differences between the actual weight and the objective's weight with its margins of all investment structure elements (positions and market segments).
Compliance Checking Calculation	Individual objective check that indicates whether a specific constraint is checked.
Investment Profile Name	Specifies the investment profile name.
Return	
Portfolio Return	Specifies the return of the portfolio between "from date" and "till date".
Benchmark Return	Specifies the return of the benchmark for the month displayed in the Period column.
Pt/Bench Over/Under Performance	Specifies the difference between the portfolio's return and its benchmark's return, if benchmark's return is available.
Return From Date	Specifies the return "from date" of the portfolio.
Return Till Date	Specifies the return "till date" of the portfolio.
Activity	
Last Operation Date	Specifies the number of days between the current date and the last operation performed on the portfolio.
Last Forex Operation Date	Specifies number of days between the current date and the last Forex operation performed on the portfolio.

6.1.2.3 Notepad tab

The **Notepad** tab displays the notepad information for a portfolio.

Field name	Description
Note Date	Specifies the date and time when the note was entered.
User	Provides a reference to the user who is the issuer of the notepad.
Type	Provides a reference to the type of notepad.
Title	Specifies the title of the notepad.

6.1.2.4 Business Entities tab

The **Business Entities** tab displays information about the business entities that have the portfolio in their composition.

Column name	Description
Code	Specifies the business entity code.
Name	Specifies the business entity name.
Denomination	Specifies the business entity denomination.
Organization Role	Specifies the business entity organisational role.
Main Business Entity	Specifies whether or not the business entity is the portfolio's main entity.
Role	Specifies the role that the business entity has on the portfolio.

6.2 Client Details

The **Client Details** screen is used to view all the definitions of a third party. This screen can be viewed from the results of a function showing a reference to a client third party.

The following sections provide information about the **Client Details** screen:

- [Common data](#)
- [Client Details screen tabs](#)

6.2.1 Common data

Common information displayed on all **Client Details** screens includes the following:

- [Identification](#)
- [Reference](#)

6.2.1.1 Identification

The **Identification** section shows the main attribute identifiers of a client.

Field name	Description
Code	Specifies the identification code for the third party.
Name	Provides the name of the third party. It is typically used in screen displays.
Denomination	Provides the long name of the third party in the default language of the system.

6.2.1.2 Reference

The **Reference** section shows the main attributes for a client.

Field name	Description
Type	Indicates the type of third party.

Field name	Description
Status	Specifies the status of the client.
Active	Describes the state of the third party. If a third party is inactive, it does not appear on the default selection lists.
Currency	Specifies the reference currency of the third party.
Language	Specifies the unique identifier of a language.
Main Business Entity	Specifies the third party's main business entity.
Begin Date	Specifies the "begin date" that the client is based on.
End Date	Specifies the "end date" that the client is based on.

6.2.2 Client Details screen tabs

The following tabs are available on the **Client Details** screen:

- [Details tab](#)
- [Contact tab](#)
- [Financial Profile tab](#)
- [Dashboard tab](#)
- [Owned Portfolios tab](#)
- [Notepad tab](#)
- [Business Entities tab](#)

6.2.2.1 Details tab

The **Details** tab displays the main attributes relative to the setting of a client.

Field name	Description
Reference Country	Specifies the legal residence of the third party.
Risk Country	Specifies the risk country of the third party.
Tax Country	Specifies the fiscal residence of the third party.
Calendar	Specifies the unique technical identifier of an occurrence.

6.2.2.2 Contact tab

The **Contact** tab shows all the contact information of a client.

Field name	Description
Phone Number	Specifies the telephone number of the third party.
Fax Number	Specifies the fax number of the third party.
Telex Number	Specifies the mask number of the third party.
e-mail address	Specifies the email address (optional) of the third party.

6.2.2.3 Financial Profile tab

The **Financial Profile** tab shows the financial profile of a client.

Field name	Description
Level of Education	Specifies the client's level of education.

Field name	Description
Mifid Last Mod. Date	Used to persist the date when the client data was last modified.
Know Complex Instrument	A flag used to indicate whether the client has knowledge of complex instruments.
Known/Exp Fin. Indices Deriv.	Provides a precise category of which complex instruments the client knows. Used for index derivatives.
Known/Exp Econ. Deriv.	Provides a precise category of which complex instruments the client knows. Used for economic statistics.
Known/Exp Curr. Deriv.	Provides a precise category of which complex instruments the client knows. Used for currency derivatives.
Known/Exp Secu. Deriv.	Provides a precise category of which complex instruments the client knows. Used for securities.
Known/Exp Interest Deriv.	Provides a precise category of which complex instruments the client knows. Used for interest rate derivatives.
Known/Exp Commod. Deriv.	Provides a precise category of which complex instruments the client knows. Used for commodities derivatives.
Known/Exp Credit. Deriv.	Provides a precise category of which complex instruments the client knows. Used for credit derivatives.
Known/Exp Other Complex Instr.	Provides a precise category of which complex instruments the client knows. Used for other complex instruments.

6.2.2.4 Dashboard tab

The **Dashboard tab** shows the overall information of a client.

Field name	Description
Max. Market Value Variation (in)	Specifies the maximum variation, in percentages, between the portfolio's current market value and its market value one year ago, related to the market value one year ago.
Max. Liquidity - Net Capital Ratio (Net Cash Debtor)	Specifies the maximum percentage of positive cash balances, related to the portfolio's current market value, less the advances in cash.
Compliance	
Objective Compliance	Specifies, for each head strategy, whether all actual weights are in the set bounded by the corresponding objectives with margins (the set is [objective - margin; objective + margin]).
Constraints Compliance	Specifies, for each portfolio, whether or not constraints have been breached.
Activity	
Last Proposal Date	Specifies the last date of the last proposal for any of the portfolios linked to the client.
Last Operation Date	Specifies the last operation date for the portfolio.

6.2.2.5 Owned Portfolios tab

The **Owned Portfolios tab** shows the different relationships between the clients and their portfolios.

Field name	Description
Portfolio	Specifies the portfolio unique identifier.
Validity Date	Specifies the validity date for the part of the composition.

Field name	Description
End Date	Specifies the end of the relationship.
Client Name	Specifies the client name.
Ownership Rule	Specifies the legal status of the ownership for the related portfolio.
Weight	Specifies the ownership weight for the related third party.

6.2.2.6 Notepad tab

The **Notepad** tab displays the notepad information for the portfolio.

Field name	Description
Note Date	Specifies the date and time when the note was entered.
User	Provides a reference to the user who is the issuer of the notepad.
Type	Provides a reference to the type of the notepad.
Title	Specifies the title of the notepad.

6.2.2.7 Business Entities tab

The **Business Entities** tab displays information about the business entities that have third party in their composition.

Column name	Description
Code	Specifies the business entity code.
Name	Specifies the business entity name.
Denomination	Specifies the business entity denomination.
Organization Role	Specifies the business entity organisational role.
Main Business Entity	Specifies whether or not the business entity is the third party's main entity.
Role	Specifies the role that the business entity has on the third party.

6.3 Instrument Details

The **Instrument Details** screen is used to view all details of a financial instrument for a particular nature.

Most WUI functions display a reference to an instrument on their screens (e.g., the instrument of the position in a valuation screen, an instrument record such as in an instrument search results view, etc). In these screens, the information about the instrument is limited allowing you to see only some of the main attributes of the instrument definition. You can view full details of the instrument when you click on the reference of the instrument.

In the following sections, you will learn about:

- [Instrument natures](#)
- [Common data](#)
- [Generic data definition](#)
- [Types of Instrument Details screens](#)
- [Instrument Details screen tabs](#)

6.3.1 Instrument natures

The following table presents the instrument nature and criteria. The Criteria column provides the business rule that defines the category of an instrument according to the values of the attribute in the Triple'A Plus Core system.

Instrument nature	Criteria
Stock	Nature IN (stock)
Fixed Income Bonds	Nature IN (Fixed Income, MBS, Discounted Instrument, Option Bond, Convertible Bond, Debt)
Fund	Nature IN (Fund, Index)
Option	Nature IN (Options, Exotic Option, Swaptions)
Future	Nature IN (Future)
Swap	Nature IN (Swap)
FRA	Nature IN (FRA)
Money Market	Nature IN (Money Market)
Forex	Nature IN (Forward, FX Swap)
Cash Account	Nature IN (Cash Account)
Commodity	Nature IN (Commodity)
Others	Instrument not classified in any of the categories above.

6.3.2 Common data

Certain common information is displayed on all **Instrument Details** screens. The **Identification** and **Nature & Type** sections are the same for all instruments, whereas the **Instrument** section is specialized according to the category of the instrument.

6.3.2.1 Resume

The resume (summary) is the synthetic description of the instrument and is displayed as a title. This title shows the main attributes for an instrument depending on the instrument nature. For example:

- On a stock:
 - Denomination
 - Issuer
 - Reference currency
- On a fixed income:
 - Denomination
 - Issuer
 - Reference currency
 - Begin and end dates
 - Interest rate
 - Accrual rule
 - Payment frequency
- On a future:
 - Denomination
 - Reference currency
 - Underlying instrument

- Begin and end dates
- Contract size

6.3.2.2 Identification

The **Identification** section shows the main attribute identifiers of an instrument.

Field name	Description
Code	Specifies the identification code for the instrument.
Name	Provides the name of the instrument. It is typically used in screen displays.
Denomination	Provides the long name of the instrument in the default language of the system.
Main Business Entity	Specifies the instrument's main business entity.

6.3.2.3 Nature & Type

The **Nature & Type** section shows the main attributes that identify the nature and type of the instrument plus information about the status, active value, and generic value.

Field name	Description
Nature	Specifies the nature of the instrument.
Sub-nature	Provides a finer, hard-coded definition of an instrument.
Status	Specifies the status of the instrument.
Type	Specifies the type of instrument. Instrument types are user-defined classifications of instruments.
Sub-Type	Specifies the subtype of the instrument.
Active Flag	Describes the state of the financial instrument.
Contract Type	Used to classify money market contracts.
Category	Specifies the category.

6.3.2.4 Instrument

The **Instrument** section shows the main attributes that define the instrument according to its category.

Field name	Description
Begin Date	Specifies the date at which the instrument exists or is issued.
End Date	Specifies the date at which the instrument ceases to exist.
Contract Size	Defines the quantity implied by one contract.
Reference Currency	Indicates the currency of the principal or capital.
Redemption Quote	Specifies the market quotation of the exercise of a term contract expressed in a specific currency via a relationship. It can also be the market quotation of the redemption quote.
Option Class	Specifies if the holder of an option has the right to buy or sell the underlying instrument.
Option Style	Specifies when the option can be exercised.
Underlying Qty	Indicates the quantity of the underlying instrument.
Underlying	Indicates the underlying instrument.
Underlying Denomination	Indicates the denomination of the underlying instrument.

Field name	Description
Physical	A flag that specifies the delivery mode of the underlying instrument.

6.3.3 Generic data definition

The generic data defines a grouping of attributes based on a business logic.

This information can be referenced in various **Instrument Details** screens, depending on the category of the instrument. You can view this information on the **Details** tab of the **Instrument Details** screens.

Field name	Description
Risk	
Risk Nature	Specifies the risk factor to which the instrument is exposed.
Risk Level	Used in conjunction with the investment profile risk level to check that the instrument does not exceed the risk level tolerated by the investment profile.
Risk Currency	Specifies the currency to which the instrument is exposed.
Risk Country	Specifies the geographic area to which the instrument is most exposed.
Advanced	
Market	Specifies the main market on which the instrument price is quoted (e.g., NYSE, LIFFE).
Settlement Day	Specifies the number of days to settlement.
Price Calculation Rule	Indicates how the unitary amount (price) is computed from the market quote.
Tax Country	Specifies the fiscal residence of the instrument.
Round Lot Quantity	Specifies the round lot quantity.
Valuation Rule	Specifies the valuation rules.
Capital Gain Tax	Specifies the tax rate applied on short term or long term capital gains.
Min Trade Quantity	Indicates the trade quantity.
Withholding Tax Rate	Specifies the rate withheld on income payment.

6.3.4 Types of Instrument Details screens

Financial instruments have different properties so there are different types of screens used to view the details of an instrument. Each screen is associated with a business market standard category of instrument (i.e., stock, option, or fixed income). The screens were created to focus on the main attributes associated with each business category.

The following table describes the types of **Instrument Details** screens:

Nature	Screen name	Description
Stock	Stock Instrument Details	Used to view details of instruments with nature Stock.
Cash account	Cash Account Instrument Details	Used to view details of instrument with nature Cash Account.

Nature	Screen name	Description
Fixed Income, MBS, Discounted Instrument, Option Bond, Convertible Bond, and Debt	Fixed Income Instrument Details	Used to view details of the instrument based on the financial Fixed Income concept. Used to view details of instruments with natures Fixed Income, MBS, Discounted Instrument, Option Bond, Convertible Bond, and Debt.
Option, Exotic Option, and Swaptions	Option Instrument Details	Used to view details of the instrument based on the financial Option concept. Used to view details of instruments with natures Option, Exotic Option, and Swaptions. Provides definition of the Option terms and conditions, and also allows you to view the reference to the underlying instrument.
Fund Share	Fund Share Instrument Details	Used to view details of an instrument with the nature Fund Share.
Swap	Swap Instrument Details	Used to view details of an instrument with the nature Swap.
Forward Rate Agreement	Forward Rate Agreement (FRA) Instrument Details	Used to view details of an instrument with the nature Forward Rate Agreement (FRA). This is when a notional borrower agrees with a notional lender the rate of interest that will be applied to a notional loan for some period in the future.
Forex, Forward, and FX Swap	Forex Instrument Details	Used to view details of instruments with natures Forex, Forward, and FX Swap.
Money Market	Money Market Instrument Details	Used to view details of an instrument with the nature Money Market.
Commodity	Commodity Instrument Details	Used to view details of an instrument with the nature Commodity.
Others	Others	Used to view miscellaneous instruments that do not have value or do not share the characteristics of the specific instruments described above. The instruments: • can be purchased and sold • can be quoted (though this is not necessary) • have no Accrued Interest or Redemption The information displayed in the risk view of the Details tab depends on the risk factor to which the instrument has been exposed.

6.3.5 Instrument Details screen tabs

The following tabs are available on the **Instrument Details** screen:

- [Details tab](#)
- [Prices tab](#)
- [Chrono tab](#)
- [Events tab](#)
- [Event, Terms and Condition tab](#)
- [Sector tab](#)
- [Rating tab](#)
- [Trading tab](#)
- [Income tab](#)
- [Identification tab](#)
- [Instrument Composition tab](#)

- [Notepad tab](#)
- [Business Entities tab](#)

6.3.5.1 Details tab

The **Details** tab displays the main attributes relative to the risk classification and evaluation of the instrument.

For a detailed description of the values used in this section, see section [Generic data definition](#).

6.3.5.2 Prices tab

The **Prices** tab shows the instrument price history.

Field name	Description
Quote Date	Specifies the date that the quote was set.
Quote	Specifies the quote, which is equal to the price.
Denomination	Provides the long name of the instrument in the default language of the system.
Market	Specifies the main market on which the instrument price is quoted (e.g., NYSE, LIFFE).
Currency	Provides the currency of the quote.
Provider	Provides the default quotation source (e.g., Telekurs, Reuters).

6.3.5.3 Chrono tab

The **Chrono** tab presents the historical values for different natures of business indicators of an instrument.

Field name	Description
Nature	Describes the nature of the chronological data.
Sub Nature Type	Specifies the user-defined hierarchy of types and subtypes for an instrument.
Date	Specifies the date from which the chronological data is valid.
Value	Provides the numerical value containing the data for the date.
Currency	Specifies the currency of the quote.
Reference Currency	Provides the reference currency.

6.3.5.4 Events tab

The **Events** tab shows the event exchanged between the instrument selected and another instrument. This tab has the following radio buttons that manage the information displayed:

- **Dividends:** Income associated with the instrument.
- **Corporate Action:** Corporate actions that occur during the life of the instrument.

Field name	Description
Dividend	
Begin Date	Specifies the date from which the event occurs.
Validity Date	Specifies the date when the event is known.

Field name	Description
Projection	Select this checkbox to indicate that the dividend is to be projected in future cash flows at the Frequency option specified for the instrument. If you do not select the checkbox (the projection flag is set to NO), the dividend is not projected. If you select the checkbox, (the projection flag is set to YES), be sure to define the Frequency option in the Modify Instrument screen; otherwise, the dividend will not be projected either.
Value	Specifies the instrument value.
Corporate Actions	
Code	Provides the reference code.
Provider	Specifies the provider of the corporate action.
Type	Specifies the subtype of the corporate action event to which the message relates.
Sub-Type	Specifies the subtype of the instrument.
Processing Status	Provides the status that defines the completeness of information contained in the notification (e.g., complete, preliminary announcement confirmed, and preliminary announcement unconfirmed).
Effective Date	Specifies the effective date.
Announcement Date	Specifies the announcement date.

6.3.5.5 Event, Terms and Condition tab

The **Event, Terms and Condition** tab presents the historical values for the different nature of business indicators of an instrument. This tab has the following radio buttons that manage the information displayed:

- **Income:** This button is the default choice.
- **Issue and Redemption:** List of issue and redemption events.
- **Corporate Action:** Corporate actions that occur during the life of the instrument.
- **Exchange:** List of exchanges of financial instruments.
- **Interest Rate Condition:** Defines how the amount paid by the Income Payment event is obtained.

Field name	Description
Validity Date	Specifies the date from which the condition is valid.
Begin Date	Specifies the date at which interest starts to accrue.
Nature	Defines whether an income event is paid or received.
Dividend	Provides the dividend amount.
Currency Name	Specifies the unique technical identifier of the occurrence.
Fixed Exchange Rate	Specifies the fixed exchange rate.
End Validity Date	Indicates the date until which the event is valid.
Issue and Redemption	
Validity Date	Specifies the date from which the condition is valid.
Begin Date	Specifies the date from which the event may occur.
Nature	Defines the nature of the issue or redemption.
End Date	Specifies the last date on which an event may occur.

Field name	Description
Currency	Indicates the currency of the price at which the instrument is issued or redeemed.
Quote	Provides the market description of the price of a financial instrument at issue or redemption.
Announcement Date	Describes the last date on which the party that decides to redeem an issue must declare his/her intention. Necessary for simulation purposes.
Effective Expiration Date	Indicates the date on which the total redemption was determined to be the effective reimbursement. Applies to Final, Call, or Put redemptions.
Notice Days	Indicates the number of days that a notice must be given to the holder (issuer) in the event of early redemption.
Corporation Action	
Code	Provides the reference code.
Provider	Specifies the provider of the corporate action.
Type	Specifies the subtype of the corporate action event to which the message relates.
Sub-Type	Specifies the subtype of the instrument.
Processing Status	Provides the status that defines the completeness of information contained in the notification (i.e., complete, preliminary announcement confirmed, and preliminary announcement unconfirmed).
Effective Date	Specifies the effective date.
Announcement Date	Specifies the announcement date.
Exchange Event	
Validity Date	Specifies the date from which the condition is valid. Events are only used for analysis purposes if their validity date is reached.
Begin Date	Specifies the date from which the event occurs. For events that can only occur at one specific date, the value is the same as the end date.
Nature	Specifies the nature of the exchange.
Code	Provides the most common reference number used for this event.
New Instrument	Specifies the instrument that is received in this exchange.
Quantity of New Instrument	Specifies the quantity of new instrument received in the flow.
Currency Name	Provides the currency name.
Reference Quantity	Specifies the reference quantity of a financial instrument for the exchange event.
Physical	Specifies whether the exchange really occurred or if the value of each leg has to be calculated and the cash difference paid or received.
End Date	Specifies the last date at which an event can occur.
Quote	Specifies the market quotation at which an instrument is exchanged.
End Validity Date	Specifies the date until which the event is valid. If specified, it must be greater than or equal to the validity date.
Interest Rate Condition	
Validity Date	Specifies the date from which this condition is valid.
Begin Date	Specifies the date from which the interests accrue at a new interest rate.
End Date	Specifies the date until which this condition applies.

Field name	Description
Nature	Specifies the nature of the interest condition.
Interest Calculation Rule	Indicates how the rate is calculated.
Interest Rate	Provides the interest rate (in %).
Minimum Interest Rate	Specifies the minimum value under which the interest rate cannot fall.
Maximum Interest Rate	Specifies the maximum value above which the interest rate cannot rise.
Multiplicative Margin	Specifies either positive or negative multiplicative margin.
Additive Margin	Specifies the percentage of interest rate that is added (or subtracted, if negative) to the interest rate of the benchmark RATE.

6.3.5.6 Sector tab

The **Sector** tab displays the sectors associated with the instrument.

Field name	Description
Validity Date	Specifies the validity date of a sector attribution.
Codification	Specifies the synonym subtable that associates an economic sector's codes with the instrument.
Sector	Provides a reference to the instrument sector.

6.3.5.7 Rating tab

The **Rating** tab lists the rating information defined for the instrument. This tab has the following radio buttons that manage the information displayed:

- **Rating**
- **Guarantee**

Field name	Description
Rating	
Codification	Provides a reference to the codification, which necessarily characterizes an occurrence of rating attribution.
Rating	Provides a reference to the rating, which is associated with an occurrence through a rating attribution.
Begin Date	Indicates the date from which this specific rating is applicable. This date is part of the unique key in this table and allows the historization of the ratings attributed to an occurrence.
Guarantee	
Third Party	Provides a reference to a third-party of the guarantee.
Type	Provides a reference to a type of guarantee.
Percentage	Specifies the percentage of the total issue of instrument covered by the guarantee.

6.3.5.8 Trading tab

The **Trading** tab references the markets where the instrument can be traded. This tab has the following radio buttons that manage the information displayed:

- **Trading Place:** Displays the trading place references of the markets where the instrument can be traded.
- **Trading Currency:** Displays the trading currency referenced for the instrument.
- **Deposit:** Displays the deposit referenced for the instrument.

Field name	Description
Trading Place	
Market	Specifies the main market on which the instrument price is quoted.
Currency	Specifies the currency of the quote.
Main Place	Specifies the main place for the corresponding instrument.
Trading Currency	
Currency	Specifies the currency of the quote.
Main Currency	Specifies the main trading currency for the corresponding instrument.
Deposit	
Code	Specifies the unique identifier of an occurrence as seen by the user.
Name	Provides the short name of an occurrence. The short name does not have to be unique.
Custodian	Provides a reference to the custodian (i.e., a third-party) that the deposit is linked to.

6.3.5.9 Income tab

The **Income** tab displays the income associated with the instrument.

Field name	Description
Validity Date	Specifies the date from which the condition is valid.
Begin Date	Specifies the date at which interest starts to accrue.
Nature	Defines whether an income event is paid or received.
Dividend	Specifies the dividend amount.
Currency Name	Specifies the unique technical identifier of the occurrence.
Fixed Exchange Rate	Specifies the fixed exchange rate.
End Validity Date	Indicates the date until which the event is valid.

6.3.5.10 Identification tab

The **Identification** tab groups a set of common attributes for all instruments that allow the identification of the instrument. This tab has the following radio buttons that manage the information displayed:

- **Synonym:** Displays the synonym associated with the instrument.
- **Denomination:** Displays the different languages defined for the instrument.

Field name	Description
Synonym	
Codification	Provides a reference to the codification that characterises a synonym.
Code	Provides the code of a synonym.
Denomination	
Language	Specifies the unique identifier of a language.
Denomination	Specifies the text of the denomination of an object in a specific language.

6.3.5.11 Instrument Composition tab

The **Instrument Composition** tab displays the composition associated with the instrument.

Field name	Description
Instrument	Provides the instrument name.
Begin date	Specifies the date at which the instrument exists or is issued.
End date	Specifies the date at which the instrument ceases to exist.
Rank	Specifies the rank of the currency.
Quantity	Specifies the instrument quantity.

6.3.5.12 Notepad tab

The **Notepad** tab displays the notepad information for the instrument.

Field name	Description
Note Date	Provides the date and time when the note was entered.
User	Provides a reference to the user who is the issuer of the notepad.
Type	Provides a reference to the type of the notepad.
Title	Provides the title of the notepad.

6.3.5.13 Business Entities tab

The **Business Entities** tab displays information about the business entities that have the portfolio in their composition.

Column name	Description
Code	Specifies the business entity code.
Name	Specifies the business entity name.
Denomination	Specifies the business entity denomination.
Organization Role	Specifies the business entity organisational role.
Main Business Entity	Specifies whether or not the business entity is the instrument's main entity.
Role	Specifies the role that the business entity has on the instrument.

6.4 Operation Details

The Operation Details function provides the ability for the user to view the details of an operation according to its business category/sub-category. It is a sub-dependent function that can be executed via the results provided by another function such as Position Details or Portfolio Activity.

The **Operation Details** screens are specialized per business category of operation and are based on the Triple'A Plus entity extended operation.

In the following sections, you will learn about:

- [Types of operations](#)
- [Common data](#)
- [Types of Operation Details screens](#)
- [Tabs of Operation Details screens](#)

6.4.1 Types of operations

The following table presents the business category and sub-category of operations, with the display type associated to manage the Triple'A Plus Web screen, and the criteria that defines the classification of an operation within the category/sub-category.

The criteria define the business rule used to associate a category/sub-category with an **Operation Details** screen.

Category	Sub-Category	Criteria
Security	Stock	Nature IN (Buy, Sell) AND Instrument nature IN (stock)
	Bonds	Nature IN (Buy, Sell) AND Instrument Nature IN (Fixed Income, MBS, Discounted Instrument, Option Bond, Convertible Bond)
	Fund	Nature IN (Buy, Sell) AND Instrument Nature IN (Fund)
Traded Derivatives	Option	Nature IN (Buy, Sell) AND Instrument Nature IN (Options, Exotic Option, Swaption)
	Future	Nature IN (Buy, Sell) AND Instrument Nature IN (Future)
OTC Derivatives	Swap	Nature IN (Buy, Sell) AND Instrument Nature IN (Swap)
	FRA	Nature IN (Buy, Sell) AND Instrument Nature IN (Fra)
Money Market		Instrument Nature IN (Money Market)
Forex	Spot	Instrument Nature IN (Cash Account) AND Instrument Reference Currency != Cash Account 1 Reference Currency
	Forward/Swap	Instrument Nature IN (Forward, FX Swap)
Security Investment/Withdrawal/Transfer		Nature IN (Investment, Withdrawal, Transfer) AND Instrument Nature != Cash Account
Security Investment/Withdrawal/Transfer		Nature IN (Investment, Withdrawal, Transfer) AND Instrument Nature = Cash Account
Adjustment	Exchange	Nature=Adjustment AND Adjustment Nature IN (Exchange, Exchange with Fees and Taxes)
	Margin Call	Nature=Adjustment AND Adjustment Nature IN (Margin Call)
	Corporate Action	Nature=Adjustment AND Adjustment Nature NOT IN (Exchange, Exchange with Fees and Taxes, Margin Call)
Income		Nature IN (Income)
Portfolio Transfer		Nature IN (Portfolio Transfer)
Locking		Nature IN (Locking)
Fees		Nature IN (Fees)
Others		Operation not classified in any of the business categories above.

6.4.2 Common data

Certain common information is displayed on all **Operation Details** screens:

- The **Operation Header** and **Identification** sections are the same for all operations but the **Operation** section is specialized per operation category.

- The **Cases and Clarification view** section is displayed only for operation categories Security, Forex, Money Market, and Derivatives. **Note that only cases generated by trading constraints and linked to the operation are displayed.**

6.4.2.1 Operation Header

The **Operation Header** section displays the common heading attribute for all operations, which allows the end user to view the status of an operation.

Field name	Description
Status	Specifies the status of the operation.
Code	Specifies the identification code for the instruments. Click the Detail icon to View Order Detail . The order detail is accessible only for securities and derivatives with operation nature equal to buy or sell.
Source Code	Provides a reference to the identifier of an operation in any external system.
Operation Date	Specifies the date on which a transaction was agreed or an order was decided.
Value Date	Specifies the value day for accrued interest computation.
Accounting Date	Specifies the date on which the operation was entered into the books of the institution or an order was decided (i.e., = transaction date for an order).

6.4.2.2 Identification

The **Identification** section displays all information used to identify the operation. It includes the operation's nature, portfolio, and instrument.

Depending on the category/sub-category of the operation of the portfolio and instrument, this section could be a specialized section.

Field name	Description
Nature	Specifies the nature of the instrument.
Type	Specifies the type of instrument. Instrument types are user-defined classifications of instruments.
Sub-Type	Specifies the subtype of the instrument.
Portfolio Code	Provides the unique business identifier of the portfolio.
Portfolio Name	Provides the portfolio name.
Instrument Name	Specifies the instrument of the operation.
Instrument Code	Provides a reference to the instrument.
Account	Provides a reference to the 'main' cash account of the operation.
Reference Operation	
Reference Nature	Specifies the reference nature of the operation.
Reference Operation Code	Specifies the reference of the position/operation to merge/close with.
Locking	
Lock Nature	Specifies the nature of the locking.
Lock Type	Provides a reference to a type of locking.
Lock Operation Code	Provides a reference to the code of an operation that is locked by the current operation.

Field name	Description
Adjustment	
Adjustment Nature	Specifies the nature of the adjustment.

6.4.2.3 Operation

The **Operation** section displays the main information related to the operation. Depending on the category/sub-category of operation, this section could be a specialized section.

Field name	Description
Quote	Indicates the investment unit quote of the instrument.
Quantity	Specifies the quantity of the instrument that is transferred.
Operation Gross Amount	Indicates the gross amount of an operation expressed in the operation currency.
Operation Net Amount	Specifies the net amount of an operation expressed in the operation currency.
Accrued Interest	Specifies the amount of accrued interest.
Historical Quote	Provides the historical quote of the transferred position.
Historical Op Net Amount	Provides the historical net amount of an operation expressed in the instrument currency.
Amount	Specifies the amount.
FX Rate	
Client Rate	Provides the client rate.
Base Rate	Provides the base rate.
Operation Type	
Buy	Indicates the buy operation.
Sell	Indicates the sell operation.

6.4.2.4 Cases and clarifications view

The **Cases and clarifications view** section provides information about the list of cases and their clarification that are generated by the operation, which are displayed only for operation categories Security, Forex, Money Market, and Derivatives. For more information about operation categories, see section [Types of operations](#).

The list of cases is based on a search process on the case_link entity unlike the result of cases in the **View Order Details** screen, which is based on a format result. The result of this search is a list of cases attached to the current operation. **Only cases generated by trading constraints** can be retrieved and displayed in the **Cases and clarifications view** section.

Field name	Description
Sub Nature	Specifies the case management sub nature.
Description	Provides a description of the case.
Status	Specifies the status of the case.
Severity	Specifies the severity of the case.
Clarification Description	Provides a description of the clarification associated to the case.

6.4.3 Types of Operation Details screens

The structure of an operation (i.e., its specific composition in terms of positions or balance positions) is defined by its nature. For each nature, there is a logical entity that transforms the business logic of the operation into a set of records that are physically stored in the operation, position, and balance position tables. These logical entities can be viewed in the following different types of **Operation Details** screens (allocated by the categories/sub-categories of an operation):

- [Security](#)
- [Traded Derivatives](#)
- [OTC Derivatives - Swap](#)
- [OTC Derivatives - FRA](#)
- [Money Market](#)
- [Forex – FX Spot](#)
- [Forex – FX Forward](#)
- [Forex – FX Swap](#)
- [Adjustment – Margin Call](#)
- [Adjustment – Exchange](#)
- [Adjustment – Corporate Action](#)
- [Portfolio Transfer](#)
- [Securities Investment/Withdrawal/Transfer](#)
- [Cash Investment/Withdrawal/Transfer](#)
- [Locking/Unlocking](#)
- [Income](#)
- [Fees](#)
- [Others](#)

6.4.3.1 Security

The **Security** screen is used to view the details of an operation in the category Security.

Field name	Description
Quote	Provides the investment unit quote of the instrument.
Quantity	Specifies the quantity of the instrument that is transferred.
Operation Gross Amount	Specifies the gross amount of an operation, expressed in the operation currency.
Operation Net Amount	Specifies the net amount of an operation, expressed in the operation currency.
Accrued Interest	Specifies the amount of accrued interest.

6.4.3.2 Traded Derivatives

The **Traded Derivatives** screen is used to view the details of the operation in the category Derivatives and sub-category Future or Option.

Field name	Description
Quote	Provides the investment unit quote of the instrument.
Quantity	Specifies the quantity of the instrument that is transferred.
Operation Gross Amount	Specifies the gross amount of an operation, expressed in the operation currency.

Field name	Description
Operation Net Amount	Specifies the net amount of an operation, expressed in the operation currency.
Accrued Interest	Specifies the amount of accrued interest.
Historical Quote	Provides the historical quote of the transferred position.
Historical Op Net Amount	Provides the historical net amount of an operation, expressed in the instrument currency.
Amount	Specifies the amount
FX Rate	
Client Rate	Specifies the client rate.
Base Rate	Specifies the base rate.
Operation Type	
Buy	Indicates the buy operation.

6.4.3.3 OTC Derivatives - Swap

The **OTC Derivatives - Swap** screen is used to view the details of the operation, in the category Buy or Sell, and instrument with the nature Swap. It covers Interest Rate Swap (IRS) and Currency Interest Rate Swap (CIRS, also known as Currency Swap), which should not be confused with a FX Swap.

The screen presents a summary of the structure of an Interest Rate Swap according to the standard market definition, with a special focus on highlighting the paying and receiving leg structure.

Field name	Description
Operation Swap	
Quote	Indicates the investment unit quote of the instrument.
Quantity	Specifies the quantity of the instrument that is transferred.
Expiration Date	Indicates the date on which a security expires.
Swap- Definition	
Sub-Nature	Specifies the sub-nature position.
Principal Exchange Rule	Specifies if and when the principal is exchanged in Interest Rate Swaps.
Begin Date	Specifies the date from which the interests accrue at a new interest rate.
End Date	Specifies the date until which this condition applies.
Generic	Specifies the generic instrument.
Swap- Receiving Leg	
Currency	Provides a reference to the currency of the portfolio.
Interest Rate	Specifies the interest rate that must be applied on the resulting position.
Floating Rate Instrument	Specifies the floating rate associated with a floating rate bond or the paid floating leg of a Swap.
Accrued Rule	Defines the number of days used to compute the accrued interests.
Payment Frequency	Specifies the number of payment frequency units between two payments.

Field name	Description
Swap- Paying Leg	
Currency	Provides a reference to the currency of the portfolio.
Interest Rate	Specifies the interest rate that must be applied on the resulting position.
Floating Rate Instrument	Specifies the floating rate associated with a floating rate bond or the paid floating leg of a Swap.
Paid Leg Accrued Rule	Specifies the accrual basis for the paid leg of a Swap.
Payment Frequency	Specifies the number of payment frequency units between two payments.
Operation Forward Rate Agreement	
Quote	Indicates the investment unit quote of the instrument.
Quantity	Indicates the quantity of the instrument that is transferred.
FRA	
Underlying	Specifies the underlying instrument of a derivative instrument that has been de-normalized.
Accrued Rule	Defines the number of days used to compute the accrued interests.

6.4.3.4 OTC Derivatives - FRA

The **OTC Derivatives - FRA** screen is used to view the details of the operation with nature buy or sell for an instrument with the nature FRA.

The screen provides a view focused on the specificities of the FRA, especially highlighting the period of the FRA as well as the associated underlying floating rate and contract rate.

Field name	Description
Quote	Indicates the investment unit quote of the instrument.
Quantity	Specifies the quantity of the instrument that is transferred.
Operation Gross Amount	Specifies the gross amount of an operation, expressed in the operation currency.
Operation Net Amount	Specifies the net amount of an operation, expressed in the operation currency.
Accrued Interest	Specifies the amount of accrued interest.
Historical Quote	Provides the historical quote of the transferred position.
Historical Op Net Amount	Provides the historical net amount of an operation, expressed in the instrument currency.
Amount	Provides the amount.
FX Rate	
Client Rate	Specifies the client rate.
Base Rate	Specifies the base rate.
Operation Type	
Buy	Indicates the buy operation.

6.4.3.5 Money Market

The **Money Market** screen is used to view the details of the operation in the category Money Market (i.e., deposit, loan, amendment, or rollover) except for income, which is processed by the **Income Operation** screen.

The screen covers the main money market operation, but also intra-life events, focused on liquidity deposits and loans processed between the bank or fiduciary, and the clients. It also groups traditional operations such as term deposits, call deposits, and cash advances.

Money market operations (i.e., CDs, papers, or money market fund share) are managed via the **Securities Category** screen because in the private banking / wealth management activity, they are investment vehicles based on an instrument for the client.

Field name	Description
Amount	
Expiration Date	Date on which a security expires.
Interest Date	Interest rate that must be applied on the resulting position.
Counterparty	Reference to the counterparty with whom the operation has been concluded.
Contract Length	Length of the term of each contract.
Auto Renewal	Indicates how a money market contract should be treated at expiration.
Renewal Treatment	When a money market contract is to be rolled-over, this field indicates what the principal of the new contract should be.
Renewal End Length	
Renewal End Date	Indicates the final date at which the client plans to continue renewing a money market contract.

6.4.3.6 Forex – FX Spot

The **Forex – FX spot** screen is used to view the details of the operation in the category Forex Spot (FX spot) as defined in the standard market finance practice.

Field name	Description
Amount	Provides the amount.
FX Rate	
Client Rate	Specifies the client rate.
Base Rate	Specifies the base rate.
Operation Type	
Sell	Indicates the sell operation.
Buy	Indicates the buy operation.

6.4.3.7 Forex – FX Forward

This **Operation Details** screen is used to view the details of the operation in the category Forex Forward (FX Forward) operations (i.e., with the instrument nature Forward).

It provides a view presenting the flows exchanged and the Forex rates at the dates of exchange with the direction of the flow (buy or sell) for each currency and date, and the accounts used for each currency.

Field name	Description
Sell	
Sell	Indicates the sell operation.
FX Rate	
FX Rate	Specifies the foreign exchange rate.

Field name	Description
Buy	
Buy	Indicates the buy operation.

6.4.3.8 Forex – FX Swap

This **Operation Details** screen is used to view the details of the operation in the category Forex Swap (FX Swap) operations (i.e., with the instrument nature FX Swap).

It provides a view presenting the flows exchanged at the Spot and Forward dates and the Forex rates at the dates of exchange with the direction of the flow (buy or sell) for each currency and date.

For an open operation (i.e., "FX Swap Open" reference nature):

Field name	Description
Trade Currency	
Buy (*) Forward	Amount traded.
Sell (*) Spot	Amount traded.
Account	Account applied for payment in traded currency.
Exchanged Currency	
Sell (*) Forward	Amount exchanged.
Buy (*) Spot	Amount exchanged.
Account2	Account2 applied for payment in exchanged currency.
FX Rate and Dates	
FX Spot Rate	Specifies the foreign exchange rate at the Spot date.
FX Client Rate	Specifies the foreign exchange rate at the Forward date.
Expiration date	Expiration date means the Forward date.
Swap pips	Difference between the Fx Forward Market Rate and the Fx Spot rate.
Margin pips	Difference between the Fx Client Rate and the Fx Forward Market Rate.

For sell, operation field names are inversed: "Sell" instead of "Buy" and "Buy" instead of "Sell".

For a close operation (i.e., "FX Swap Close" reference nature):

Field name	Description
Trade Currency	
Sell (*)	Amount traded.
Exchanged Currency	
Buy (*)	Amount exchanged.
FX Rate and Dates	
FX Spot Rate	Specifies the foreign exchange rate at the Spot date.
Fx Client Rate	Specifies the foreign exchange rate at the Forward date.

For sell, operation field names are inversed: "Sell" instead of "Buy" and "Buy" instead of "Sell".

6.4.3.9 Adjustment – Margin Call

The **Adjustment – Margin Call** screen is used to view the details of the operation in the category Adjustment that represents the Margin Call operation.

Field name	Description
Quote	Indicates the investment unit quote of the instrument.
Quantity	Specifies the quantity of the instrument that is transferred.
Operation Gross Amount	Specifies the gross amount of an operation, expressed in the operation currency.
Operation Net Amount	Provides the net amount of an operation, expressed in the operation currency.

6.4.3.10 Adjustment – Exchange

The **Adjustment – Exchange** screen is used to view the details of the operation in the category Adjustment that represents an exchange between two assets.

Field name	Description
Fixed Income	
Quote	Indicates the investment unit quote of the instrument.
Quantity	Specifies the quantity of the instrument that is transferred.
Operation Gross Amount	Specifies the gross amount of an operation, expressed in the operation currency.
Operation Net Amount	Provides the net amount of an operation, expressed in the operation currency.
Accrued Interest	Specifies the amount of accrued interest.
Deposit	Provides a reference to the deposit of the instrument position that is bought.
Adjustment	
Adjusted Instrument	Provides a reference to the 'Adjusted Instrument' of the operation. This field is different from NULL in the case of the 'Adjustment'.
Adjusted Quantity	Specifies the quantity of the adjusted instrument position. By default, this quantity is 0.
Adjusted Deposit	Provides a reference to the deposit of the adjusted instrument position.

6.4.3.11 Adjustment – Corporate Action

The **Adjustment – Corporate Action** screen is used to view the details of the operation in the category Adjustment that represents a corporate action derived from an adjustment of the instrument into position (such as a split of equity).

Field name	Description
Instrument	Specifies the instrument of the operation.
Fixed Income	
Quote	Specifies the investment unit quote of the instrument.
Quantity	Specifies the quantity of the instrument that is transferred.
Operation Gross Amount	Specifies the gross amount of an operation, expressed in the operation currency.

Field name	Description
Operation Net Amount	Specifies the net amount of an operation, expressed in the operation currency.
Accrued Interest	Specifies the amount of accrued interest.
Deposit	Provides a reference to the deposit of the instrument position that is bought.
Adjustment	
Adjusted Instrument	Provides a reference to the 'Adjusted Instrument' of the operation. This field is different from NULL in the case of the 'Adjustment'.
Adjusted Quantity	Specifies the quantity of the adjusted instrument position. By default, this quantity is 0.
Adjusted Deposit	Provides a reference to the deposit of the adjusted instrument position.

6.4.3.12 Portfolio Transfer

The **Portfolio Transfer** screen is used to view the information about an operation that allows for the process of a transfer of an instrument position between two portfolios and/or deposits.

Field name	Description
Transfer Form	
Portfolio Name	Specifies the unique business identifier of the portfolio.
Portfolio Code	Provides the portfolio name.
Deposit	Provides a reference to the deposit of the instrument position that is bought.
Transfer To	
Portfolio Name	Provides a unique business identifier of the portfolio.
Portfolio Code	Provides the portfolio name.
Deposit	Provides a reference to the deposit of the instrument position that is bought.
Transferred	
Instrument	Specifies the instrument of the operation.
Quote	Indicates the investment unit quote of the instrument.
Operation Gross Amount	Specifies the gross amount of an operation, expressed in the operation currency.
Operation Net Amount	Specifies the net amount of an operation, expressed in the operation currency.
Accrued Interest	Specifies the amount of accrued interest.

6.4.3.13 Securities Investment/Withdrawal/Transfer

The **Securities Investment/Withdrawal/Transfer** screen is used to view operation details for deposit and withdrawal of securities assets.

Field name	Description
Quantity	Specifies the quantity of the instrument that is transferred.
Accrued Interest	Specifies the amount of accrued interest.
Historical Quote	Provides the historical quote of the transferred position.

Field name	Description
Historical Op Net Amount	Provides the historical net amount of an operation, expressed in the instrument currency.

6.4.3.14 Cash Investment/Withdrawal/Transfer

The **Cash Investment/Withdrawal/Transfer** screen is used to view operation details for deposit and withdrawal of cash.

Field name	Description
Operation Net Amount	Specifies the net amount of an operation, expressed in the operation currency.
Amount	Specifies the amount.

6.4.3.15 Locking/Unlocking

The Locking/Unlocking screen is used to view operation details for “free” locking of an instrument position.

Field name	Description
Quantity	Specifies the quantity of the instrument that is transferred.
Lock Limit	Specifies the limit date of a locking.
Deposit	Provides a reference to the deposit of the instrument position that is bought.

6.4.3.16 Income

The **Income** screen is used to view the details of operations with the nature income, whatever the nature of the instrument.

The screen mainly displays information such as dividends, coupons, or interest payments. All payments of intermediaries defined through the terms and conditions of the instrument are referenced in the operation.

Field name	Description
Quantity	Specifies the quantity of the instrument that is transferred.
Operation Gross Amount	Specifies the gross amount of an operation, expressed in the operation currency.
Operation Net Amount	Specifies the net amount of an operation, expressed in the operation currency.

6.4.3.17 Fees

The **Fees** screen is used to view information for payment of general/management fees that are managed by operations with the nature fees.

Field name	Description
Amount	Specifies the amount.

6.4.3.18 Others

The **Others** screen is used to view operation details not classified into any of the defined business categories/sub-categories.

Field name	Description
Quote	Indicates the investment unit quote of the instrument.

Field name	Description
Quantity	Specifies the quantity of the instrument that is transferred.
Operation Gross Amount	Specifies the gross amount of an operation, expressed in the operation currency.
Operation Net Amount	Specifies the net amount of an operation, expressed in the operation currency.
Accrued Interest	Specifies the amount of accrued interest.

6.4.4 Tabs of Operation Details screens

The following tabs are available on the **Operation Details** screens:

- [Details tab](#)
- [Fees tab](#)
- [Ordering tab](#)
- [Audit tab](#)
- [Notepad tab](#)

6.4.4.1 Details tab

The **Details** tab provides more detailed information about the operation. The information displayed is in relation to the category/sub-category of the operation.

The following information is available on this tab:

- **Cash Payment:** References the attributes for the usage of a cash portfolio for payments.
- **Intermediaries:** Groups the main intermediaries generally involved in a transaction. It is mainly used for securities assets.
- **Locked/Unlocked Instrument:** Shows whether an instrument is locked/unlocked with the operation done.
- **Advanced:** Displays advanced operation details information.

Field name	Description
Cash Payment	
Account	Provides a reference to the main cash account of the operation. Note: Not applicable for FX Forward and FX Swap because already specified in the Operation module.
Account2	Provides a reference to the second cash account of the operation. Note: Not applicable for FX Forward and FX Swap because already specified in the Operation module.
Account3	Provides a reference to the third cash account of the operation.
Cash Portfolio Code	Provides a reference to the identification code of the cash portfolio. Note: Not applicable for FX Forward and FX Swap.
Cash Portfolio Name	Provides a reference to the name of the cash portfolio. Note: Not applicable for FX Forward and FX Swap.
Intermediaries	
Deposit	Provides a reference to the deposit of an operation.
Market	Provides a reference to the market (Third Party) on which an operation is concluded.

Field name	Description
Intermediary	Provides a reference to the intermediary (Third Party) on which an operation is concluded.
Locked/Unlocked Instrument	
Name	Provides a reference to the instrument of the locking position that may be generated when selling another security.
Denomination	Provides the long name of the occurrence.
Lock Quantity	Indicates the quantity of the locking position that may be generated when selling another security. This quantity is a 'displayed' quantity, which must be multiplied by the 'instrument contract size' to find the real quantity.
Lock Limit Date	Specifies the limit date of a locking.
Lock Deposit	Provides a reference to the deposit of the instrument of the locking position that may be generated when selling another security.
Lock Dirty Quote	Provides a reference to the dirty unit quote (i.e., including accrued interest) of the locking position that may be generated when selling another security.
Lock Clean Quote	Provides a reference to the clean unit price (i.e., excluding accrued interest) of the locking position that may be generated when buying another security.
Lock Price Margin	Provides a reference to the price margin applied to the dirty price of the locking position that may be generated when selling another security.
Advanced	
Historical Pft Net Amount	Specifies the historical net amount of an operation, expressed in the portfolio currency (i.e., the reference currency of the portfolio).
Historical Instr Net Amount	Specifies the historical net amount of an operation, expressed in the instrument currency (i.e., the reference currency of the instrument).
Historical Op Exch Rate	Specifies the historical exchange rate between the operation currency and the portfolio currency.
Historical Instr Exch Rate	Specifies the historical exchange rate between the instrument currency and the portfolio currency.

6.4.4.2 Fees tab

The **Fees** tab shows the details of the groups of fees for the operation.

Field name	Description
Fees and Tax Type	Specifies the fees and taxes operation.
Amount	Specifies the amount of the corresponding Balance Position Type. Explains the difference between the Operation Gross Amount and the Operation Net Amount.

6.4.4.3 Ordering tab

The **Ordering** tab shows information about the ordering terms and conditions defined when the order derived from the operation was created.

The following information is included on this tab:

- Ordering: Contains information about the ordering terms and conditions defined.
- Transmission: Groups terms and conditions about the transmission of the operation.

- Communication: Groups attributes relative to the channel and mode of the contact between the client and the bank.

Field name	Description
Order Nature	Describes the nature of the chronological data.
Order Price Nature	Corresponds to additional information characterising a trade.
Order Validity Nature	Specifies the validity nature of an order.
Minimum Order Quantity	Specifies the minimum quantity of an order.
Sub Nature Type	Specifies the user-defined hierarchy of types and subtypes for an instrument.
Limit Date	Specifies the date from which the chronological data is valid.
Value	Provides the numerical value containing the data for the date.
Currency	Specifies the currency of the quote.
Reference Currency	Provides the reference currency.
Transmission	
Order Mode Type	Defines the order mode.
Transmission Mode	Mode of transmission.
Transmission Date	Date of transmission.
Trader Manager	Trader who handled the operation.
Trader Instruction	Trader's instructions.
Communication	
Initiation	Refers to the client who initiated the instructions or the person (trader or back-office operator) for whom the instructions are intended.
Contact By	Provides the name of the person who made the contact.
Contact Mode	Specifies the mode of contact.
Contact Date	Provides the date of the communication.
Client Instruction	Specifies the client message.

6.4.4.4 Audit tab

The **Audit** tab displays in detail the creation and modification of the operation.

Field name	Description
User Name	Provides the name of the user who created the event.
Creation Date	Provides the creation date of the event.
Last Modify User	Provides the name of the last user who modified the operation's data.
Last Modify Date	Provides the last date the modification was made.

6.4.4.5 Notepad tab

The **Notepad** tab displays the details of a notepad selected from the list.

Field name	Description
Note Date	Provides the date and time when the note was entered.
User	Provides a reference to the user who is the issuer of the notepad.

Field name	Description
Type	Provides a reference to the type of the notepad.
Title	Provides the title of the notepad.

7 Dashboard

7.1 Overview

The Dashboard function enables you to identify at one glance how many of your portfolios or clients are violating a defined business indicator. A business indicator is a criterion such as "Portfolio Liquidity - Net Capital Ratio must not be higher than 50%".

The dashboard then provides you with the possibility to quickly access the portfolio or client that is violating a business indicator, perform an analysis of the reasons for a violation, and follow up with corrective measures.

The Dashboard function is available for both your accessible portfolios and clients. It is split up into two parts: the **Scorecard** section and the **Details** section.

7.1.1 Scorecard section

The **Scorecard** section contains a table view that displays the dashboard summary.

It displays the number of portfolio/clients per category that violate a business indicator. The default category for portfolios is the portfolio service type (Discretionary, Advisory, None), the default category for clients is the client currency.

7.1.2 Details section

From the **Scorecard** section, you can access the **Details** section by clicking the number of portfolios/clients that violate a business indicator. The **Details** section shows the individual portfolio/client records that violate a business indicator. From the **Details** section, you can also access the individual portfolios/clients to perform your analysis.

7.2 The portfolio dashboard

7.2.1 Accessing the portfolio dashboard scorecard

The portfolio dashboard is displayed after you log in to Triple'A Plus. The **Scorecard** section shows the number of portfolios that violate a business indicator per given category.

The default category for portfolios is the service type. It is possible for a bank to change this during the implementation of Triple'A Plus, should the service type not be convenient for the bank.

The following table outlines the business indicators displayed on the scorecard:

Business indicator	Description
Market Value	Set if the market over the last year has dropped below a defined percentage threshold. The percentage threshold can be defined by the bank during set-up.
Return	Set if the return of the portfolio over the last year is less than a defined threshold. Note that there are two defined thresholds, one for discretionary portfolios, and one for advisory portfolios.

Business indicator	Description
Last Operation	Set if the last operation was carried out longer than N days ago. If no operations exist, checks for the last order.
Constraints	Set if the constraints evaluation of the portfolio returned non-compliant records.
Objectives	Set if the objectives evaluation of the portfolios returned non-met targets.
Liquidity - Net Capital Ratio	Set if the Liquidity - Net Capital Ratio excluding cash advances of the portfolio is larger than a defined threshold. The percentage threshold can be defined by the bank during set-up.

7.2.2 Displaying dashboard details for a business indicator

To know which portfolios are violating a given business indicator, click the hyperlink showing the number of violations for a given portfolio category and a business indicator within the dashboard.

The system then fetches the concerned portfolios, and displays them in the portfolio dashboard **Details** section.

The following table outlines the information that is displayed with the portfolio details:

Column	Description
Select box column	It is possible to select several portfolios to analyse them together; see section Putting several portfolios into analysis scope .
Code	The portfolio code.
Currency Code	The portfolio currency.
Client Name	The name of the client the portfolio is linked to, if any.
Service Type	The service type: <None>, Discretionary, Advisory, Execution only.
Market Value (Ptf Ccy)	The portfolio's market value, expressed in the portfolio currency.
Market Value Variation (in %)	The market value variation as a percentage over the last year.
Market Value	An icon, indicating whether the Market Value Drop business indicator has been violated: Cross icon: The business indicator has been violated. Checkmark icon: The business indicator has not been violated. Question Mark icon: The business indicator has not been computed/defined by the system. - For information about icon images, see section Icons, fields, and links.
Percentage of Cash	The percentage of cash contained in the portfolio, excluding cash advances.
Liquidity - Net Capital Ratio	An icon, indicating whether the Liquidity - Net Capital Ratio business indicator has been violated. The icons used are the same as in the Market Value column.
Last Operation Date	The last date an operation was carried out on this portfolio.
Last Operation	An icon, indicating whether the Last Operation business indicator has been violated. The icons used are the same as in the Market Value column.
Objectives	An icon, indicating whether the Objectives business indicator has been violated. The icons used are the same as in the Market Value column.
Constraints	An icon, indicating whether the Constraints business indicator has been violated. The icons used are the same as in the Market Value column.

Column	Description
Portfolio Return	The portfolio return over the last year.
Return	An icon, indicating whether the Constraints business indicator has been violated. The icons used are the same as in the Market Value column.

7.2.3 Putting a portfolio into analysis scope

Every financial function carried out in Triple'A Plus is carried out on a so-called analysis scope. The analysis scope defines the data domain (which portfolios, clients, etc.) on which the financial function is executed.

For example, having looked at the portfolio dashboard **Details** section, if you notice that a certain portfolio has violated the Return business indicator, and consequently you would like to have a closer look at this portfolio, you need to put it into the analysis scope to perform your analysis.

Perform the following steps:

- Click the portfolio code in the portfolio dashboard **Details** section.
The system changes the analysis scope to "Portfolio", if this was not already the case, and sets the portfolio's code in the **Analysis Scope** input text box of the **Context** section.
- Click the **Execute** button to execute the identification function on the selected portfolio.
The system redirects you to the identification screen.

7.2.4 Putting several portfolios into analysis scope

It is possible to put several portfolios into the analysis scope to analyse them together.

Perform the following steps:

- Select the portfolios you would like to put into the context, by clicking the checkboxes associated with the portfolios.
- Click the **Use in Context** button.
The system changes the context analysis scope to "Query" and fills the **Analysis Scope** input field with the label "Search".
- Click the **Execute** button to launch the identification for the selected list of portfolios.

7.2.5 Launching a financial function

You can launch a financial function directly from the portfolio dashboard details for a given portfolio.

Each business indicator is mapped to the launching of a financial function, as outlined by the following table:

Business indicator	Financial function launched
Market Value	Valuation
Liquidity - Net Capital Ratio	Valuation
Last Operation	Portfolio Activity
Objectives	Compliance Checking
Constraints	Compliance Checking
Return	Return

To launch the financial function, click the icon of the respective business indicator.

The system then invokes the mapped business function and redirects you to the appropriate screen. If you, for example, click on the business indicator icon within the column "Market Value", the system launches a valuation, and you will be redirected to the Valuation function, displayed under **Analysis > Valuation**.

7.3 The client dashboard

The client dashboard is a client-centric view on the dashboard features. The mechanisms, however, are exactly the same. The **Scorecard** section exposes the number of clients that violate a business criteria for a given client category, and the **Details** section tells you exactly which clients are in violation of a given business indicator.

7.3.1 Accessing the client dashboard

To access the client dashboard, select the **Client** tab that is displayed in the portfolio dashboard.

The system displays the client dashboard **Scorecard** and **Details** sections. The details are empty.

The following table outlines the business indicators displayed on the scorecard:

Business indicator	Description
Market Value Drop	Set if the market over the last year has dropped below a defined percentage threshold on any of the portfolios linked to the client. The percentage threshold is the threshold defined on portfolio level.
Last Proposal	Set if the last proposal sent to the client is longer than N days ago. The number of days can be defined by the bank during set-up.
Last Operation	Set if the last operation was on any of the clients portfolios was carried out longer than N days ago. The number of days is the number of days defined on portfolio level.
Objectives	Set if the evaluation of any of the objectives of the portfolios linked to the client returned targets that were not met.
Constraints	Set if the constraints evaluation of any of the portfolio linked to the client returned non-compliant records.
Liquidity - Net Capital Ratio	Set if the Liquidity - Net Capital Ratio excluding cash advances of any of the portfolios linked to the client is larger than a defined threshold. The percentage threshold is the threshold defined on portfolio level.

7.3.2 Displaying dashboard details for a business indicator

As for the portfolio dashboard, you obtain the list of clients violating a certain business indicator by clicking the hyperlink showing the number of clients for the relevant business indicator/category within the dashboard.

The system then displays the client dashboard details, with the clients violating that business indicator. The following table outlines the information that is displayed with the client dashboard details:

Column	Description
Name	The client name.

Column	Description
Language	The client's language.
Currency	The client currency.
Country	The client's residence
Market Value	The client's portfolios market value expressed in the client currency.
Max. Market Value Variation	The maximum market value variation of all of the client's portfolios.
Market Value	An icon, indicating whether the Market Value Drop business indicator has been violated: Cross icon: The business indicator has been violated. Checkmark icon: The business indicator has not been violated. Question Mark icon: The business indicator has not been computed/defined by the system. For information about icon images, see section Icons, fields, and links.
Max. percentage of cash	The maximum percentage of cash in the client's portfolios.
Liquidity - Net Capital Ratio	An icon, indicating whether the Liquidity - Net Capital Ratio business indicator has been violated. The icons used are the same as for the Market Value column.
Last Operation Date	The most recent operation date on all of the client portfolios.
Last Operation	An icon, indicating whether the Last Operation business indicator has been violated. The icons used are the same as for the Market Value column.
Objectives	An icon, indicating whether the Objectives business indicator has been violated. The icons used are the same as for the Market Value column.
Constraints	An icon, indicating whether the Constraints business indicator has been violated. The icons used are the same as for the Market Value column.
Last Proposal Date	The date of the last proposal for any of the portfolios linked to the client.
Last Proposal	An icon, indicating whether the Last Proposal business indicator has been violated.

7.3.3 Putting a client into analysis scope

As for the portfolio dashboard, you need to include a client in the analysis scope to perform further analysis on it.

Perform the following steps:

- Click the client name in the client dashboard **Details** section.
The system changes the analysis scope to "Client", if this was not already the case, and sets the client's code in the **Analysis Scope** input text box of the **Context** section.
- Click the **Execute** button to execute the identification function on the selected client.
The system redirects you to the identification screen.

7.3.4 Launching a financial function

As for the portfolio dashboard, you can launch directly the financial function linked to a business indicator.

The following table outlines the mapping between the business indicator displayed and the financial function that will be launched:

Business Indicator	Financial Function Launched
Market Value Drop	Valuation
Liquidity - Net Capital Ratio	Valuation
Last Operation	Portfolio Activity
Objectives	Compliance Checking
Constraints	Compliance Checking
Last Proposal	Portfolio Activity

To launch the financial function, click the icon of the respective business indicator.

The system then includes the client in the context, and executes the financial function linked to the business indicator. If you, for example, click an icon in the "Liquidity - Net Capital Ratio" column, the system puts the client for the selected line into context, launches the valuation financial function, and redirects you to **Analysis > Valuation**.

8 Queries

Queries are a set of search criteria, which are used to retrieve business objects (e.g., advisors, clients, instrument, managers, portfolios and strategies).

For portfolios, it is possible in some cases to select more than one retrieved records and use the selection as a portfolio list. Note, however, that this portfolio list is only temporary and is lost when the user further selects other portfolios, logs out, or closes the web user interface (WUI).

The following types of queries exist:

- Queries defined by users, which can be saved for their own use (private) or shared with other users (public). These types of queries can be edited or deleted at a later date by authorized users. For more information, see section [Queries defined by users](#).
- Queries with search criteria that are pre-defined in the system and are used to only retrieve portfolios or clients. These are known as pre-defined queries, which users can change the search criteria to refine the search but cannot save the modifications afterwards. Only System Administrators can edit or delete those queries. For more information, see section [Pre-defined queries](#).

8.1 Queries defined by users

Queries defined by users can be used to retrieve advisors, clients, instrument, managers, portfolios, and strategies to define any search fields based on one of these business objects. If the search field is the **Analysis Scope** of the context (see *Triple'A Plus Web Packaging Reference Guide* for more details) based on query dimension, then more than one matching search result can be selected to define a temporary portfolio list for use in the function's context. In all other cases, only one matching search result can be selected.

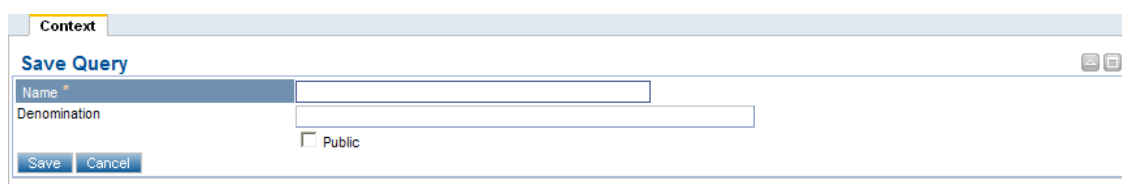

8.1.1 Defining a new query

1. Initiate a search on a business object. For more information, see section [Searching a business object with Search or Advanced Search icon](#).

A search screen for the business object is displayed.

2. Click **Save As**.

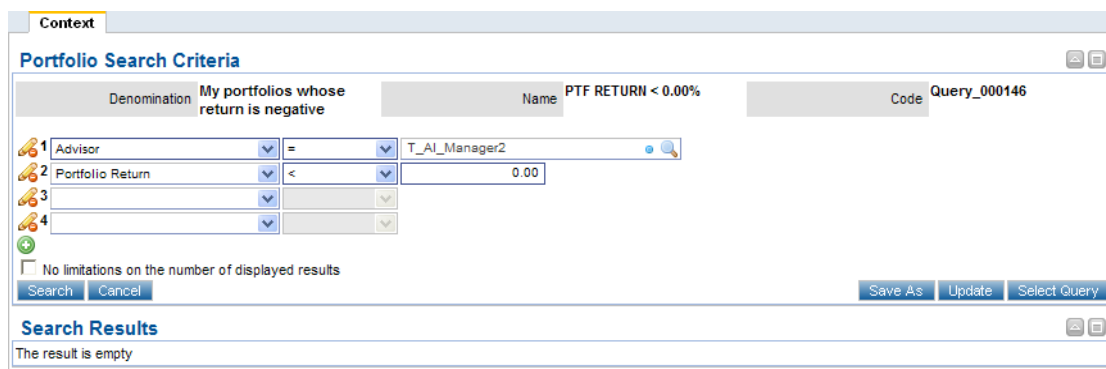

A screen to define the query's attributes is displayed.

3. Define the attributes of the query by completing the **Name** and **Denomination** fields. Check the **Public** field if you want to create a public query, otherwise it will be a private query. Only the default denomination is available; it is not possible to save a localised version (denomination per language).
4. Click **Save**.

The query is saved in the database and the search screen is displayed again with the **Denomination**, **Name**, and **Code** fields and defined search criteria of the saved query (including hidden pre-defined search criteria). It is ready to be used to retrieve matching records (see section [Using a query](#)).

Note: If the **Name** field is not defined, the system displays the error message “The mandatory field Name from table List has not been provided”. The **Code** field is defined by a default value.

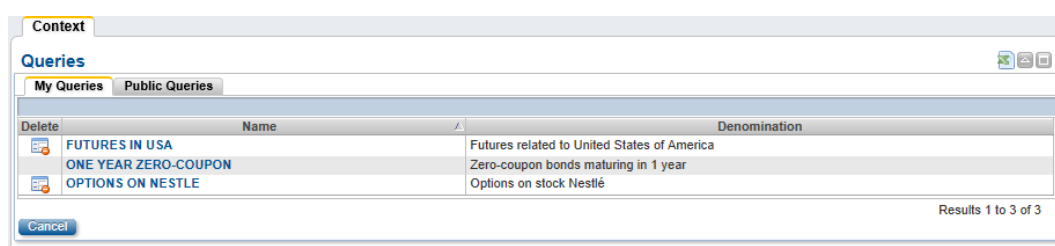

- (Optional) To return to the previous screen without saving the query in the database, click the **Cancel**. The search criteria that were previously defined are kept.

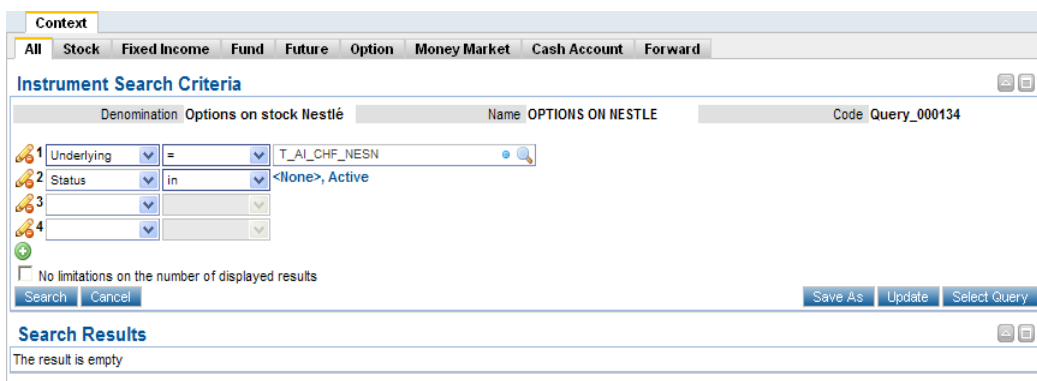

8.1.2 Copying or updating existing queries

To copy or update an existing private or public query, it must exist in the database and the user must have the rights to access it. In addition, for an update, the user must have the rights to modify it. For more information about the technical aspects of a query, refer to the *Triple'A Plus Web Packaging Reference Guide*.

- Initiate a search on a business object. For more information, see section [Searching a business object with Search or Advanced Search icon](#).
A search screen for the business object is displayed.
- Click **Select Query**.
A screen to select private queries (**My Queries** tab) or public queries (**Public Queries** tab) is displayed. Only queries in which you have access rights are displayed (see *Triple'A Plus Web Packaging Reference Guide* for more details).
 - Name column provides the name of the query and a hyperlink to select the query.
 - Denomination column provides the denomination of the query. Translated denominations are not taken into account.

- Select the query to use by clicking on its hyperlink in the Name column.
The query is loaded and ready to be used to retrieve matching records. Hidden search criteria are also loaded but not displayed.

4. If tabs are available in the search screen, you can select another tab to get either the corresponding search criteria (plus the criteria already defined in the selected query) or the corresponding output's results after executing the query.
5. If you want to modify your search, you can complete, reset, or modify the displayed criteria or add new criteria. A criterion is defined by the business object's attribute, operator, and value(s). For more information about attributes, operators, and values, refer to the *Triple'A Plus Web Packaging Reference Guide*.
 - To reset the criterion, click the **Reset Criterion** icon. The criterion is reset but not removed from display.
 - To add a new criterion, click the **Add** icon.

(For more information about icons, see section [Icons, fields, and links](#).)

Note: The usual search criteria are kept but if the query's definition includes extra ones, they are automatically loaded with the query (except the hidden ones, which are loaded but continue to be hidden).

6. Do one of the following:
 - To copy an existing query, click **Save As**.
 - To update an existing query (only if access rights are granted), click **Update**.

A screen to define the query's attributes is displayed. **Name**, **Denomination**, and **Public** fields are already pre-filled with the same values as the original query.

7. Define the attributes of the query by changing the values in the **Name** and **Denomination** fields. If you previously clicked on the **Save As** button, the **Public** field becomes editable too. Check it if you want to create a public query, otherwise it will be a private query. Only the default denomination is available; it is not possible to save a localised version (denomination per language).

Note: It is possible to copy a query without modifying the name and denomination. The consequence is that queries with same name and denomination will be displayed in the list of available queries on the business objects.

8. Click **Save**.

The query is saved in the database and the search screen is displayed again with the **Denomination**, **Name**, and **Code** fields and defined search criteria of the saved query (including hidden pre-defined search criteria). It is ready to be used to retrieve matching records (see section [Using a query](#)).

Note: If the **Name** field is not defined, the system displays the error message "The mandatory field Name from table List has not been provided". The **Code** field is defined by a default value.

- (Optional) To return to the previous screen without saving the query in the database, click **Cancel** on the search screen. The search criteria that were previously defined are kept.

8.1.3 Using a query

To use a private or public query, it must exist in the database. In addition, the user must have the rights to access it. For more information about the technical aspect of a query, refer to the *Triple'A Plus Web Packaging Reference Guide*.

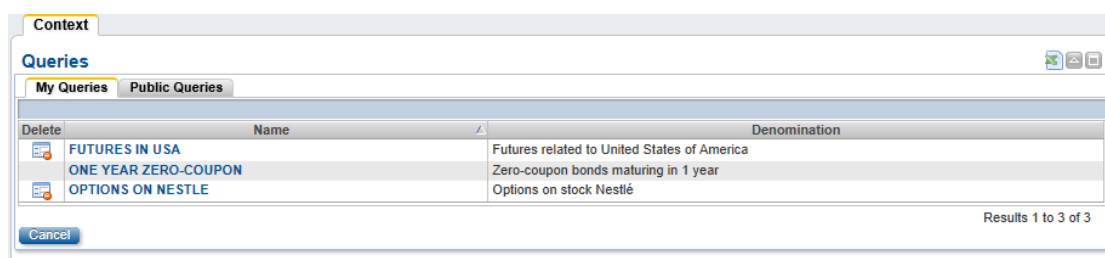

- Initiate a search on a business object. For more information, see section [Searching a business object with Search or Advanced Search icon](#).

A search screen for the business object is displayed.

- Click **Select Query**.

A screen to select private queries (**My Queries** tab) or public queries (**Public Queries** tab) is displayed. Only queries in which you have access rights are displayed (see *Triple'A Plus Web Packaging Reference Guide* for more details).

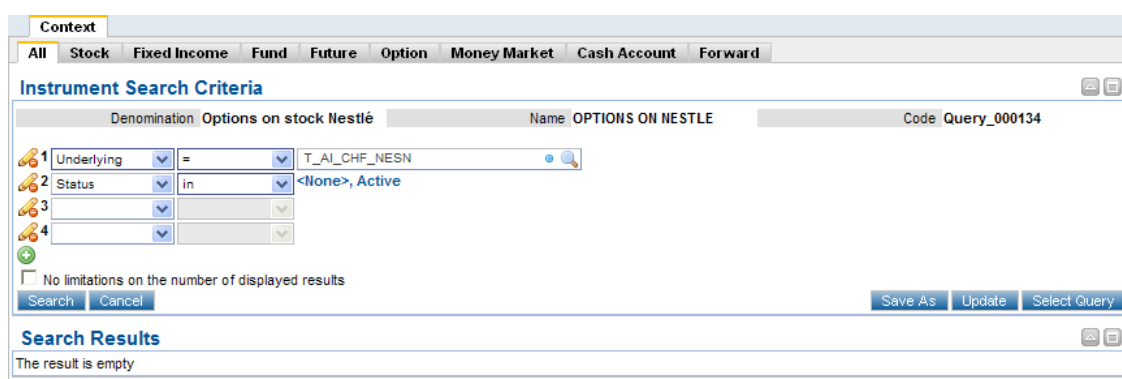

- Name column provides the name of the query and a hyperlink to select the query.
- Denomination column provides the denomination of the query. Translated denominations are not taken into account.

Delete	Name	Denomination
	FUTURES IN USA	Futures related to United States of America
	ONE YEAR ZERO-COUPON	Zero-coupon bonds maturing in 1 year
	OPTIONS ON NESTLE	Options on stock Nestlé

- Select the query to use by clicking on its hyperlink in the Name column.

The query is loaded and ready to be used to retrieve matching records. Hidden search criteria are also loaded but not displayed.

Context: **Queries**

My Queries | Public Queries

Denomination: Options on stock Nestlé | Name: OPTIONS ON NESTLE | Code: Query_000134

1 Underlying = T_AI_CHF_NESN

2 Status in <None>, Active

3

4

☐ No limitations on the number of displayed results

Search Cancel Save As Update Select Query

Search Results

The result is empty

- If tabs are available in the search screen, you can select another tab to get the corresponding output's results after executing the query.
- If you want to modify your search, you can complete, reset, or modify the displayed criteria or add new criteria. A criterion is defined by the business object's attribute,

operator, and value(s). For more information about attributes, operators, and values, refer to the *Triple'A Plus Web Packaging Reference Guide*.

- To reset the criterion, click the **Reset Criterion** icon. The criterion is reset but not removed from display.
- To add a new criterion, click the **Add** icon.

(For more information about icons, see section [Icons, fields, and links](#).)

Note: The usual search criteria are kept but if the query's definition includes extra ones, they are automatically loaded with the query (except the hidden ones, which are loaded but continue to be hidden).

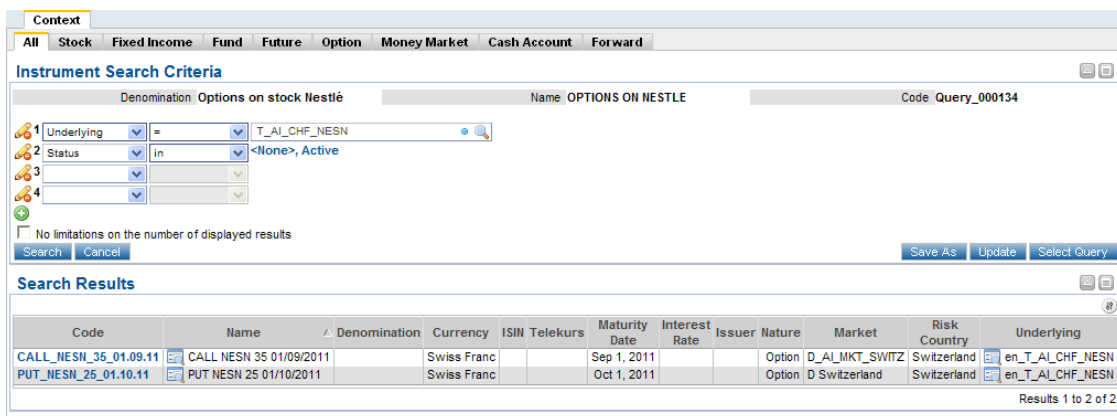

6. Click **Search** button.

Matching search results are displayed and available for selection.

By default, the system applies a limit (N) in the number of displayed matching results. If this limit is reached, the system displays the message "*Found [n] Records, only the [N] first are displayed*". This limit can be removed by checking the option **No limitations on the number of displayed results**. You will need to start a new search with the **Search** button.

7. Select the result to be used for setting the search field by clicking on the record's code in the Code column (or name in the Name column if the business object is a market segment).

The search field is set with the result you selected.

The screenshot shows the 'Instrument Search Criteria' window. The 'Context' tab is active, and the 'All' sub-tab is selected. The search criteria are defined as follows:

- Denomination: Options on stock Nestlé
- Name: OPTIONS ON NESTLE
- Code: Query_000134
- Criteria 1: Underlying = T_AI_CHF_NESN
- Criteria 2: Status in <None>, Active
- Criteria 3: (Empty)
- Criteria 4: (Empty)

The 'No limitations on the number of displayed results' checkbox is checked. The 'Search' button is highlighted. Below the search criteria, the 'Search Results' table is displayed:

Code	Name	Denomination	Currency	ISIN	Telekurs	Maturity Date	Interest Rate	Issuer	Nature	Market	Risk Country	Underlying
CALL_NESN_35_01.09.11	CALL NESN 35 01/09/2011		Swiss Franc			Sep 1, 2011			Option	D_AI_MKT_SWITZ	Switzerland	en_T_AI_CHF_NESN
PUT_NESN_25_01.10.11	PUT NESN 25 01/10/2011		Swiss Franc			Oct 1, 2011			Option	D_Switzerland	Switzerland	en_T_AI_CHF_NESN

Results 1 to 2 of 2

8. If the search field was based on a single selection of a business object's record, click on the code of a displayed record to select it and use it to define the search field from where you started. But if the search field was based on a multi-selection of portfolios, you must check the checkboxes of the desired portfolios and then, click the **Use in Context** button.

The corresponding search field from where the search was started is defined with the selected business objects. For multi-selection of portfolios, the keyword "Search" is written instead and a temporary portfolio list containing the selected portfolios is used.

8.1.4 Deleting queries

To delete a private or public query, it must exist in the database and the user must have the rights to access it. In addition, the user must have the rights to delete it. For more information about the technical aspect of a query, refer to the *Triple'A Plus Web Packaging Reference Guide*.

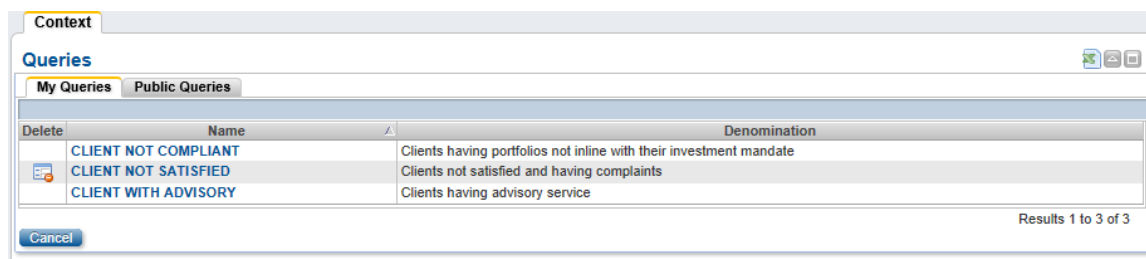

1. Initiate a search on a business object. For more information, see section [Searching a business object with Search or Advanced Search icon](#).

A search screen for the business object is displayed.

2. Click **Select Query**.

A screen to select private queries (**My Queries** tab) or public queries (**Public Queries** tab) is displayed. Only queries in which you have access rights are displayed (see *Triple'A Plus Web Packaging Reference Guide* for more details).

- Name column provides the name of the query and a hyperlink to select the query.
- Denomination column provides the denomination of the query. Translated denominations are not taken into account.

3. Click the **Delete** icon of the corresponding query. (For more information about icons, see section [Icons, fields, and links](#)).

The query is deleted physically from database and removed from the display.

8.2 Pre-defined queries

Pre-defined queries can be used to retrieve portfolios and clients to define the search field **Analysis Scope** of the context (refer to the *Triple'A Plus Web Packaging Reference Guide* for more details). For portfolios, it is possible to select some or all retrieved matching records to define a temporary portfolio list for a usage in a function's context. For clients, only one record can be selected. The following image provides an example of pre-defined queries on portfolios:

Pre-Defined Queries

Context

Basic **Advanced**

Analysis Scope: Instrument Set: Date: Currency: Load Hierarchy: Consolidation:

Pre-Defined Queries

Portfolios **Clients**

Filter Query Results by Manager(s) / Advisor(s): ☒ All ☐ Me ☐ Manager / Advisor

Name	Denomination
CONSTRAINTS MISMATCH	Portfolios not compliant with their constraints
EXE LIMIT ORD 30 DAY	Portfolios with executed limit orders for 30 days
EXP LIMIT ORD 30 DAY	Portfolios with expired limit orders for 30 days
MKT VALUE DROP > 10%	Portfolios with drop in market value greater than 10%
MORE 70% IN CASH	Portfolios with more than 70% in cash
NO FX FOR 180 DAYS	Portfolios with no forex operations for 180 days
NO FX FOR 360 DAYS	Portfolios with no forex operations for 360 days
NO OPER FOR 180 DAYS	Portfolios with no operations for 180 days
NO OPER FOR 360 DAYS	Portfolios with no operations for 360 days
OBJECTIVES MISMATCH	Portfolios not compliant with their management mandate
PERF UNDER THRESHOLD	Portfolios with absolute performance below threshold
RATING BELOW A+	Portfolios with S&P rating on bonds and commercial papers below A+
REDEMPTION IN 7 DAYS	Portfolios with redemptions of bonds and commercial papers in the next 7 days

Results 1 to 13 of 13

8.2.1 Using pre-defined queries

For pre-defined queries, users must be given the right to use and access them. In addition, the pre-defined query on the business object to search (portfolio or client) must exist in the database. For more information about the access rights and the technical aspect of a pre-defined query, refer to the *Triple'A Plus Web Packaging Reference Guide*.

1. From the menu bar, go to **Analysis > Pre-Defined Queries**.

A screen to select a pre-defined query on portfolios (**Portfolios** tab) or clients (**Clients** tab) is displayed. Only pre-defined queries in which you have access rights are displayed (see *Triple'A Plus Web Packaging Reference Guide* for more details).

- Name column provides the name of the pre-defined query and a hyperlink to select the pre-defined query.
 - Denomination column provides the denomination of the pre-defined query. Translated denomination is taken into account first, but if it is not available then the default denomination is taken into account. And if default denomination is not available, then the name is taken into account. It is an extended attribute (see *Triple'A Plus Web TSL Operating Guide* and *Triple'A Plus Web Packaging Reference Guide* for more information)
2. Before selecting a pre-defined query, define a filter to use by checking one of the following radio buttons: **All**, **Me** or **Manager/Advisor**. If **Manager/Advisor** is selected, a search field must be defined before continuing.
 3. Select the pre-defined query to use by clicking on its hyperlink in the Name column.
- The selected pre-defined query is loaded with its Code, Name, and Denomination and the defined search criteria and is automatically executed to retrieve matching records. The denomination is the localised version and if it is not available, the default one is used instead. Hidden search criteria are also loaded but not displayed.

Pre-Defined Queries

Query Criteria

Denomination: Portfolios with absolute performance below threshold | Name: PERF UNDER THRESHOLD | Code: PCK_DS_PTF_QUERY_08

1 Hold Securities Positions = Yes

2 Return below Threshold = Yes

3 Status in <None>, Active, Prospect

4

☐ No limitations on the number of displayed results

Query Results

Code	Name	Denomination	Currency	Client Code	Client Name	Advisor	Manager	Market Value (Sys. Ccy.)	Market Value Variation (in %)	Benchmark	Benchmark Return	Portfolio Return	Ptf/Bench Over/Under Performan
☐ T_AI_AC_PTF1	☐ N_AI_AC_PTF1.....end	☐ D_AI_AC_PTF1.....end	EURO	T_AI_Client2	N_AI_Client2	N_AI_Manager2	N_AI_Manager2	1,064,795.35 EUR	-2.03%			-2.03%	

Results 1 to 1 of 1

Depending on the filter used, an additional criterion is added:

- If **All** was selected, no additional criteria are added.
- If **Me** was selected, the Search Manager/Advisor criterion is defined with the current user and the operator "=". It is not editable. For records of portfolios to be retrieved and displayed, it means that the records must match all other criteria and the portfolio's advisor/manager is the current user. For records of clients to be retrieved and displayed, it means that the records must match all other criteria and the client of one or more portfolios whose advisor or manager is the current user.
- If **Manager/Advisor** was selected, the Search Manager/Advisor criterion is defined with the selected advisor/manager and the operator "=". It is not editable. For records of portfolios to be retrieved and displayed, it means that the records must match all other criteria and the portfolio's advisor or manager is the selected advisor/manager. For records of clients to be retrieved and displayed, it means that the records must match all other criteria and the client of one or more portfolios whose advisor or manager is the selected advisor/manager.

The system displays a list of matching records. The output's results depend of the pre-defined query's definition (see *Triple'A Plus Web Packaging Reference Guide* for details). For clients, only the selection of one retrieved record is possible but for portfolios it is possible to select more than one retrieved records by checking the checkboxes of the desired portfolios and then, clicking the **Use in Context** button.

Note: Even if the System Administrator does not add the search criteria "Active" and "Status" in the pre-defined query's definition, these criteria are automatically loaded when the pre-defined query is selected. "Active" search criterion is hidden and set with the value "Yes" and the operator "=". "Status" search criterion is editable and set with the values "<None>", "Active", and "Prospect" and the operator "in". In addition, for a pre-defined query on clients, the search criterion "Client" is also loaded but hidden with the value "Yes" and operator "=" to ensure that the third-parties are clients.

- If you want to modify your query, you can complete, reset, or modify the displayed criteria or add new criteria. A criterion is defined by the business object's attribute, operator, and value(s). For more information about attributes, operators, and values, refer to the *Triple'A Plus Web Packaging Reference Guide*.
 - To reset the criterion, click the **Reset Criterion** icon. The criterion is reset but not removed from display.
 - To add a new criterion, click the **Add** icon.
 (For more information about icons, see section [Icons, fields, and links](#).)
- Click **Search** button to re-execute the pre-defined query (with the updated search criteria).

Matching search results are displayed and available for selection.

By default, the system applies a limit (N) in the number of displayed matching results. If this limit is reached, the system displays the message "Found [n] Records, only the [N]

first are displayed". This limit can be removed by checking the option **No limitations on the number of displayed results**. You will need to start a new search with the **Search** button.

As described in the steps above when the initial pre-defined query was selected, the output's results depend of the pre-defined query's definition.

8.2.2 Defining a pre-defined query on clients

This section is aimed at System Administrators who will use the graphical user interface (GUI) of the Triple'A Plus Core solution to define a pre-defined query on clients. Only System Administrators can define, update, and delete pre-defined queries. Refer to the *Triple'A Plus Core User Guide* and the *Triple'A Plus Core Script Language Reference Guide* for additional information. Only the main steps are described in this section.

1. Create a list of third-party with nature Query.
2. Define its attributes **Code**, **Name**, **Denomination**, and **Data Security Profile**.

The **Name** and **Denomination** fields of the pre-defined query are the name and denomination of the corresponding list. The manager logged into the web user interface (WUI) will be able to view and access the query only if this manager's data profile's composition includes the Data Security Profile of the list (as defined by access rights).

3. Define the attribute **Type** field with the value Client. This will indicate to the system that the list is tagged to be used as a pre-defined query.
4. Click **Save** button to save the list.
5. Click **Definition** button.

A window is displayed with the list's definition.

6. Add a specific statement in the comment using {}. Details about the statement are described in the *Triple'A Plus Web Packaging Reference Guide*.
7. Click **OK** button to close the window and to save the list's definition.
8. Add translated denominations using the **Denomination** button. This is only useful if you want to later display a localised denomination in the WUI.

The **Denomination** field of the pre-defined query is the denomination of the corresponding list, with localised version taken into account. Firstly, however, executing the computation of extended attributes' values is required (refer to the *Triple'A Plus Web TSL Operating Guide*).

9. Click **Ok** to save the list and to close the window.

The list of third-party is saved in the database and ready to be used as a pre-defined query on clients.

Note: Even if the System Administrator does not add the search criteria "Active" and "Status" in the pre-defined query's definition, these criteria are automatically loaded when the pre-defined query is selected. "Active" search criterion is hidden and set with the value "Yes" and the operator "=". "Status" search criterion is editable and set with the values "<None>", "Active", and "Prospect" and the operator "in". In addition, for a pre-defined query on clients, the search criterion "Client" is also loaded but hidden with the value "Yes" and operator "=" to ensure that the third-parties are clients.

8.2.3 Defining a pre-defined query on portfolios

This section is aimed at System Administrators who will use the graphical user interface (GUI) of the Triple'A Plus Core solution to define a pre-defined query on portfolios. Only System Administrators can define, update, and delete pre-defined queries. Refer to the

Triple'A Plus Core User Guide and the *Triple'A Plus Core Script Language Reference Guide* for additional information. Only the main steps are described in this section

1. Create a list of portfolio with nature "Query".
2. Define its attributes **Code**, **Name**, **Denomination**, and **Data Security Profile**.
 The **Name** and **Denomination** fields of the pre-defined query are the name and denomination of the corresponding list. The manager logged into the web user interface (WUI) will be able to view and access the query only if this manager's data profile's composition includes the Data Security Profile of the list (as defined by access rights).
3. Define the attribute **Type** field with the value "Portfolio". This will indicate to the system that the list is tagged to be used as a pre-defined query.

4. Click **Save** to save the list.

5. Click the **Definition** button

A window is displayed with the list's definition.

6. Add a specific statement into comment using {}. Details about the statement are described in the *Triple'A Plus Web Packaging Reference Guide*.

7. Click **OK** button to close the window and to save the list's definition.

8. Add translated denominations using the **Denomination** button. This is only useful if you want to later display a localised denomination in the WUI.

The **Denomination** field of the pre-defined query is the denomination of the corresponding list, with localised version taken into account. Firstly, however, executing the computation of extended attributes' values is required (refer to the *Triple'A Plus Web TSL Operating Guide*).

9. Click **Ok** to save the list and to close the window.

The list of portfolio is saved in the database and ready to be used as a pre-defined query on portfolios.

Note: Even if the System Administrator does not add the search criteria "Active" and "Status" in the pre-defined query's definition, these criteria are automatically loaded when the pre-defined query is selected. "Active" search criterion is hidden and set with the value "Yes" and the operator "=". "Status" search criterion is editable and set with the values "<None>", "Active", and "Prospect" and the operator "in".

9 Notifications and Messaging

The following sections in this chapter explain how the Triple'A Plus notification and messaging infrastructure works:

- [About notifications and messages](#)
- [Accessing messages and notifications](#)
- [Working with messages](#)

9.1 About notifications and messages

9.1.1 Notifications

Notifications are sent to you by the system to inform you about an event that produced itself on the system. Examples are:

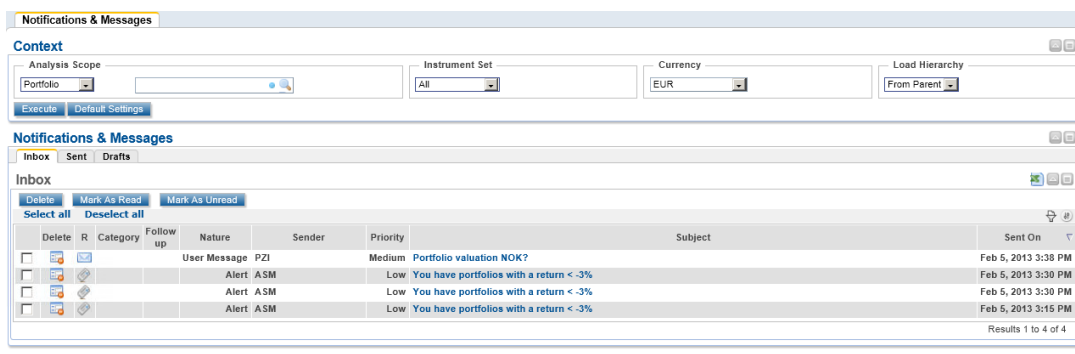

- a notification sent by an alert processor to inform you that some of your portfolios have experienced a significant loss in market value.
- a notification sent by the report generator telling you that the client statement report you launched a couple of minutes ago has completed.
- a notification sent by the Triple'A Plus Task and Contact Management module telling you that another user just assigned a task to you.

9.1.2 Messages

You can enter messages and send them to one or more managers or/and clients. Messages can be compared to a web email support.

9.2 Accessing messages and notifications

To access messages and notifications, go to **Portfolio Analysis > Home > Notifications & Messages** to display the **Notification & Messages** screen.

The screenshot shows the 'Notifications & Messages' interface. At the top, there's a 'Context' section with filters for 'Analysis Scope' (Portfolio), 'Instrument Set' (All), 'Currency' (EUR), and 'Load Hierarchy' (From Parent). Below this is a 'Notifications & Messages' section with tabs for 'Inbox', 'Sent', and 'Drafts'. The 'Inbox' tab is active, showing a list of messages. The list has columns for 'Delete', 'R', 'Category', 'Follow up', 'Nature', 'Sender', 'Priority', 'Subject', and 'Sent On'. The messages are categorized as 'User Message' and 'Alert', with a priority of 'Low'. The subject of the messages is 'Portfolio valuation NOK?' and the content is 'You have portfolios with a return < -3%'. The 'Sent On' date is 'Feb 5, 2013 3:30 PM'.

Delete	R	Category	Follow up	Nature	Sender	Priority	Subject	Sent On
☐		User Message	PZI	Alert	ASM	Low	Portfolio valuation NOK?	Feb 5, 2013 3:30 PM
☐		Alert	ASM	Alert	ASM	Low	You have portfolios with a return < -3%	Feb 5, 2013 3:30 PM
☐		Alert	ASM	Alert	ASM	Low	You have portfolios with a return < -3%	Feb 5, 2013 3:30 PM
☐		Alert	ASM	Alert	ASM	Low	You have portfolios with a return < -3%	Feb 5, 2013 3:15 PM

Results 1 to 4 of 4

In the **Notifications & Messages** section, the following tabs are available:

- [Inbox tab](#)
- [Sent tab](#)
- [Drafts tab](#)

Inbox tab

The **Inbox** tab displays messages and notifications sent to you. Messages are displayed with a **Message** icon () while notifications are displayed with a **Notification** icon ().

The following table provides details about what is available on the **Inbox** tab:

Column name	Description
checkbox	You can perform multi-delete or multi-read/unread operations by selecting the checkboxes of several notifications/messages at the same time and then, selecting the action to perform via the buttons Delete , Mark as Read , or Mark as Unread .
Delete	Displays an icon that lets you delete the notification/message.
R	Displays the following icons to tell you: - Whether the item is a notification or a message. For a message, an Envelope icon () is displayed and for a notification, a Newspaper icon () is displayed. - Whether a message has been read. If a message has been read, an Open Envelope icon is displayed. Clicking on the icon will toggle the read/unread status of the message/notification.
Category	Displays the following icons to tell you the category of the notification/message:  Success: The notification/message indicates that a process has been executed and finished successfully.  Failure: The notification/message indicates that a process failed to execute in the correct fashion.  Information: The notification/message informs you about a certain state of the system.  Warning: The notification/message warns you about a certain state of the system.  Error: The notification/message tells you that an error has occurred.
Follow up	Displays an icon that lets you immediately navigate to the location that is of concern by the notification without having to view its details. The availability of this action is dependent on the nature of the notification nature. This icon is not used with messages.
Nature	Provides an indication of the nature of the notification/message. The following natures are available in the Triple'A Plus standard software package: - Messages: - User Message (this is the only nature that exists for user messages). - Notifications: - Report Execution: Notifications related to report executions. - Alert: Notifications related to alert definitions. - Alert Processing: Notifications related to alert processing. - Task Assignment: Any notification related to a task assignment. - Task Reminder: Any notification related to a task reminder. - Contact Creation: Any notification related to contact report creations.

Column name	Description
Sender	Displays the sender (the manager or client*) who sent the notification/message. - For messages, the column displays the sender of the message. - For notifications that are linked to an operation that was executed by a user, the column displays the manager who executed the operation. As an example, for a report execution, the sender is the user who executed the report execution, while for a task assignment, the sender is the manager who assigned the task. - For notifications that are sent by the system, no sender is displayed.
Priority	Displays the priority of the notification/message.
Subject	Displays the subject of the notification/message. - For messages, this is the subject that has been entered by the sender. - For notifications, a subject/body text can be defined in several languages. If, for example, there is a French version of the notification text, and you selected the French language for the WUI, the French subject of the notification will be displayed. If there is no French version of the notification subject/text, the system will display the English version.
Sent On	Displays the date/time that the notification was sent.

* Clients can only be the sender of messages and only if client access is implemented on site.

Sent tab

For more information about this tab, see section [Viewing sent messages and their details](#).

Drafts tab

For more information about this tab, see section [Saving draft copy of your message](#).

9.2.1 Viewing notification details

To view the details of a notification:

1. Go to **Portfolio Analysis > Home > Notifications & Messages**.

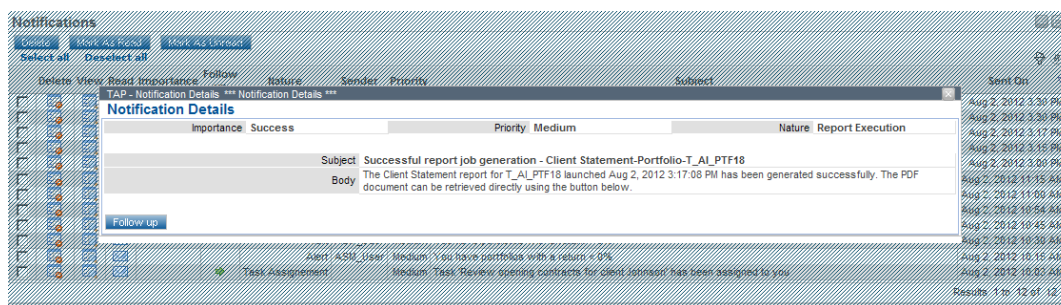

The **Notification & Messages** screen is displayed.

2. Click on the desired notification subject.

The **Notification Details** screen is displayed and contains information that is dependent on the nature of the notification:

- Report Execution: The notification subject and body text are displayed. When you click on the **Follow Up** button, you are redirected to the list of executed reports.
- Alert: The notification subject and body text are displayed. Below this information, the details of the alert as well as the results for the alert query are displayed.
- Alert Processing: The notification subject and body text are displayed.
- Task Assignment: The notification subject and body text are displayed. When you click on the **Follow Up** button, a pop-up window displays the details of the assigned task.
- Task Reminder: The notification subject and body text are displayed. When you click on the **Follow Up** button, a pop-up window displays the details of the task.
- Contact Creation: The notification subject and body text are displayed. When you click on the **Follow Up** button, a pop-up window displays the details of the task.

The following is an example of the notification details that are displayed for a notification linked to a report execution:

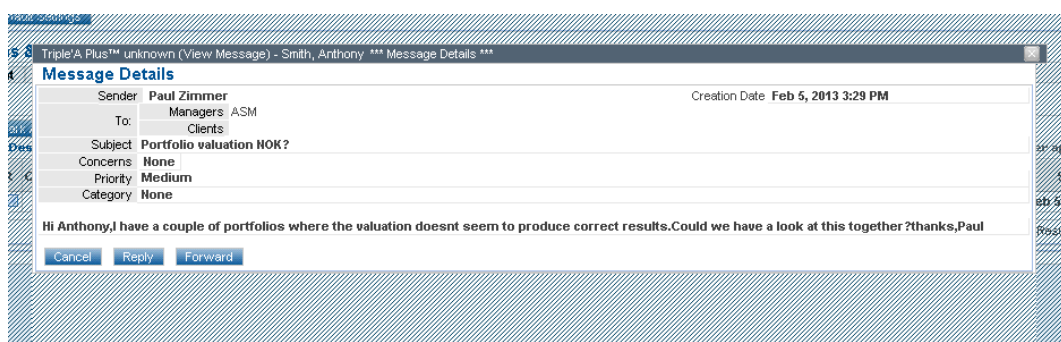

9.2.2 Viewing message details

To view details of a message that was sent to you:

1. Go to **Portfolio Analysis > Home > Notifications & Messages**.
The **Notification & Messages** screen is displayed.
2. Click on the desired message subject.

The **Message Details** screen is displayed and contains information about the message's sender, the recipients, other message attributes, its body text as well as the available actions.

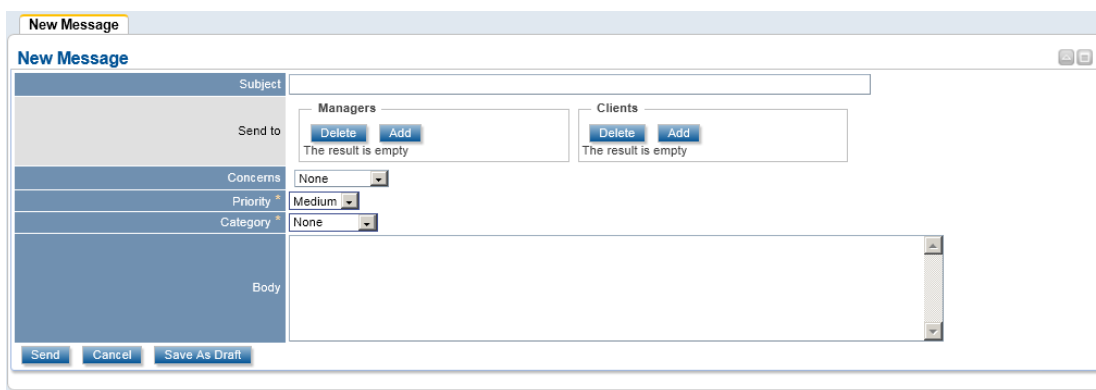

9.3 Working with messages

9.3.1 Creating and sending new messages

To create and send a new message:

1. From the menu, go to **Portfolio Analysis > Home > Notifications & Messages > New Message**.
The **New Message** screen is displayed.

2. Complete the following fields:

Field	Task
Subject	Enter the subject of the message.
Managers	Click Add to add a new Manager. The system displays a standard search form that will enable you search and select one or more managers.
Clients	Click Add to add a new Client. The system displays a standard search form that will enable you search and select one or more clients.
Concerns	Link your messages to one of the following: Portfolio, Client, Instrument, Strategy, Portfolio List, or Client List.
Priority	Select the priority of the message: Low, Medium, or High.
Category	Select the category of the message: Success, Failure, Information, Warning, or Error.
Body	Enter text for the body of the message.

3. Click **Send** to send your message.

The system sends your message and redirects you to the **Inbox** tab.

9.3.1.1 Creating messages from the toolbar or from the contextual menu

There are shortcuts for creating new messages:

- From the WUI toolbar, click on the **New Message** label or the equivalent icon (i.e., an envelope). For more information about the toolbar, see section [Toolbar](#).
- From the contextual WUI menu, available by right-clicking your mouse, select the **New Message** menu item.

In both cases the system opens a pop-up window and lets you define your new message within that window. You can also save your message as a draft copy (see [section Saving draft copy of your message](#)) or you can cancel the operation whereby the window simply closes and you are back to the location in the main WUI screen where you left off.

9.3.1.2 Saving draft copy of your message

Rather than sending your message immediately, you can save it as draft message.

To save a draft copy of your message:

- Fill in your message details as described in section [Creating and sending new messages](#).
- Click **Save As Draft**.

The system saves your message as a draft message and redirects you to the list of draft messages, if any, displayed under the **Drafts** tab.

3. (Optional) Do one of the following:

- To continue editing a draft message, click on its subject.
- To delete a draft message, click on the **Delete** icon.
- To delete several draft messages at the same time, check the checkboxes in front of these messages, and then click on **Delete** button.

9.3.2 Viewing sent messages and their details

You can view your sent messages at any time.

To view your sent messages:

1. From the menu, go to **Portfolio Analysis > Home > Notifications & Messages**.
The **Inbox** tab of the **Notifications and Messages** screen is displayed.
2. Select **Sent** tab.
The list of sent messages is displayed.

The **Sent Messages Details** screen is displayed to show:

- Message details
- List of recipients and for each recipient whether:
 - The recipient has read the message.
 - The recipient has deleted the message from his/her inbox.

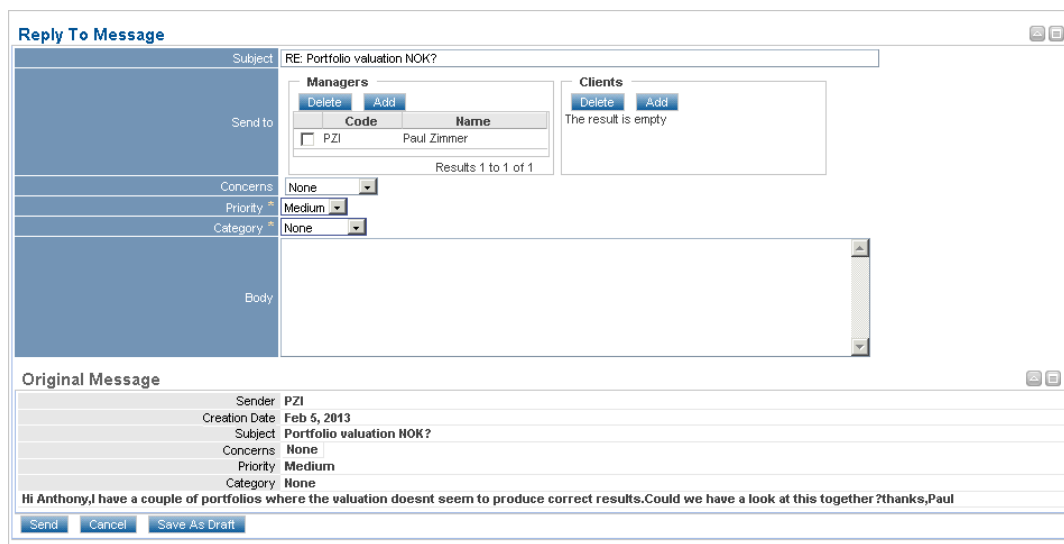

9.3.3 Replying to messages

To reply to a message that was sent to you:

1. View the message details of the message sent to you (see section [Viewing message details](#)).

The **Message Details** screen is displayed.

2. Click **Reply** button.

 Subject: Portfolio valuation NOK?
 Concerns: None
 Priority: Medium
 Category: None

Hi Anthony, I have a couple of portfolios where the valuation doesn't seem to produce correct results. Could we have a look at this together? Thanks, Paul

Send Cancel Save As Draft

The **Reply to Message** screen is displayed with details of the original message. The system prefills the following fields:

- **Subject** field: The subject line of the original message prefixed with the keyword "RE" (Reply).
 - **Sent to** field: The sender of the original message as recipient.
3. If necessary, update the subject line and/or add additional recipients.
 4. Enter your reply in the **Body** field.
 5. Do one of the following:
 - Click **Send** button to send the message to the defined recipients.
 - Click **Cancel** button to cancel the operation.
 - Click **Save As Draft** button to save the message as a draft message.

9.3.4 Forwarding messages sent to you

To forward a message that was sent to you to other recipients

1. View the message details of the message sent to you (see section [Viewing message details](#)).

The system displays the message details.

2. Click **Forward** button.

Forward Message

Hi Anthony,I have a couple of portfolios where the valuation doesnt seem to produce correct results.Could we have a look at this together ?thanks,Paul

The **Forward Message** screen is displayed with details of the original message. The system prefills the **Subject** field with the subject line of the original message prefixed with the keyword "FW:" (Forward).

3. If necessary, update the subject line.
4. Add recipients in the **Sent to** field.
5. (Optional) Enter a message in the **Body** field.
6. Do one of the following:
 - Click **Send** button to send the message to the defined recipients.
 - Click **Cancel** button to cancel the operation.
 - Click **Save As Draft** to save the message as a draft message.

9.3.5 Viewing a message and its related messages

When a message is either a reply to another message or a forward from another message, it is linked to that message. This enables the system to display all related messages when you view reply/forward message details:

10 Alerts

The Portfolio Analysis module of Triple'A Plus Web provides you with access to the Alerts function to manage public alerts and private alerts. In the following sections of this chapter, you will learn more about this function and how it works:

- [Overview](#)
- [Accessing alerts](#)
- [Managing private alerts](#)
- [Managing public alerts](#)

10.1 Overview

Alerts enable users and administrators to:

- Define a query that is executed with a defined schedule. These queries can be executed on the following target entities:
 - Portfolio
 - Client
 - Instrument
- Define a notification message that is sent to the target entities or other users if results are found for the query.

The defined alerts are processed as per the defined schedule, and an "alert processor" carries out the execution of the query and sends the notification message to the relevant user(s).

The Alerts function offers the following types of alerts:

- [Private alerts](#)
- [Public alerts](#)

10.1.1 Private alerts

Private alerts are alerts where the notification message will only be sent to the user that has created the alert.

A private alert is only accessible to the user who created it.

10.1.2 Public alerts

Public alerts are alerts that:

- have recipients who will receive the notification message defined with the alert if the query linked to the alert returned any matches for their data. Recipients can be managers, third-parties, or lists of managers or third-parties.
- can be subscribed to. If a manager or third-party is not defined as recipients but is interested in a particular public alert being run for them, the manager or third-party can subscribe to the public alert.
- are defined with a Data Security Profile. Public alerts are not only visible to the users who have created them but also all users who have access to the alert's DSP.

10.2 Accessing alerts

To access alerts:

1. Select the **Portfolio Analysis** tab.
2. Go to either **Home > Alerts > Private Alerts** to access private alerts or **Home > Alerts > Public Alerts** to access public alerts.

10.3 Managing private alerts

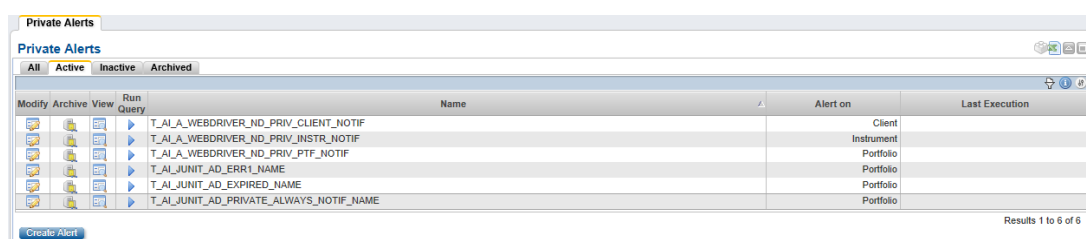

The following sections provide information about:

- [Viewing your active private alerts](#)
- [Viewing your inactive private alerts](#)
- [Viewing your archived private alerts](#)
- [Viewing all your private alerts](#)
- [Creating new private alerts](#)
- [Modifying existing private alerts](#)
- [Archiving private alerts](#)
- [Reactivating archived private alerts](#)
- [Viewing details of private alerts](#)
- [Running the query linked to a private alert](#)
- [Viewing notifications sent by private alerts](#)
- [Processing of alerts and matching results](#)

10.3.1 Viewing your active private alerts

Alerts can be active, inactive, or archived. When viewing your private alerts, the system shows by default active alerts in the **Active** tab. Active alerts are processed by the alert processor, and consequently send out notifications if they match data; inactive and archived alerts are not processed. For information about inactive and archived alerts, see sections [Viewing your inactive private alerts](#) and [Viewing your archived private alerts](#).

To view your active private alerts, go to **Portfolio Analysis > Home > Alerts > Private Alerts** from the menu bar. Then, the **Active** tab of private alerts is displayed with a list of active private alerts.

Private Alerts			
Private Alerts			
All	Active	Inactive	Archived
Modify	Archive	View	Run Query
Name	Alert on	Last Execution	
T_AL_A_WEBDRIVER_NO_PRIV_CLIENT_NOTIF	Client		
T_AL_A_WEBDRIVER_NO_PRIV_INSTR_NOTIF	Instrument		
T_AL_A_WEBDRIVER_NO_PRIV_PTF_NOTIF	Portfolio		
T_AL_IUNIT_AD_ERR1_NAME	Portfolio		
T_AL_IUNIT_AD_EXPIRED_NAME	Portfolio		
T_AL_IUNIT_AD_PRIVATE_ALWAYS_NOTIF_NAME	Portfolio		

Results 1 to 6 of 6

The following table provides details about what is available on the **Active** tab:

Column	Description
Modify	Displays an icon that lets you modify the alert.
Archive	Displays an icon that lets you archive the alert.
View	Displays an icon that lets you view the details of the alert.
Run Query	Displays an icon that lets you execute the query linked to the alert.

Column	Description
Name	Displays the name of the private alert.
Alert on	Displays the target entity on which the query is executed.
Last Execution	Displays a date/time field that tells you when the alert was last processed by the alert processor.

10.3.2 Viewing your inactive private alerts

Alerts can be active, inactive, or archived. This section describes how to view your inactive private alerts. For information about active and archived alerts, see sections [Viewing your active private alerts](#) and [Viewing your archived private alerts](#). Only active alerts are processed by the alert processor, and consequently send out notifications if they match data; inactive and archived alerts are not processed.

To view your inactive private alerts, go to **Portfolio Analysis > Home > Alerts > Private Alerts** from the menu bar. Then, select the **Inactive** tab to view alerts that you have deactivated (i.e., these private alerts have activity status Inactive).

The following table provides details about what is available on the **Inactive** tab:

Column	Description
Modify	Displays an icon that lets you modify the alert.
Archive	Displays an icon that lets you archive the alert.
View	Displays an icon that lets you view the details of the alert.
Run Query	Displays an icon that lets you execute the query linked to the alert.
Name	Displays the name of the private alert.
Alert on	Displays the target entity on which the query is executed.
Last Execution	Displays a date/time field that tells you when the alert was last processed by the alert processor.

10.3.3 Viewing your archived private alerts

Alerts can be active, inactive, or archived. This section describes how to view your archived private alerts. For information about active and inactive alerts, see sections [Viewing your active private alerts](#) and [Viewing your inactive private alerts](#). Only active alerts are processed by the alert processor, and consequently send out notifications if they match data; inactive and archived alerts are not processed.

To view your archived private alerts, go to **Portfolio Analysis > Home > Alerts > Private Alerts** from the menu bar. Then, select the **Archived** tab to view alerts that you have archived (i.e., these private alerts have activity status Archived).

Column name	Description
Reactivate	Displays an icon that lets you reactivate the alert.
View	Displays an icon that lets you view the details of the alert.
Run Query	Displays an icon that lets you execute the query linked to the alert.
Name	Displays the name of the private alert.
Alert on	Displays the target entity on which the query is executed.

Alerts can be active, inactive, or archived. This section describes how to view all your private alerts. For information about separate active, inactive, and archived alerts, see sections [Viewing your active private alerts](#), [Viewing your inactive private alerts](#) and [Viewing your archived private alerts](#). Active alerts are processed by the alert processor, and consequently send out notifications if they match data; inactive and archived alerts are not processed.

Private Alerts								
Private Alerts								

122

Column	Description
Modify	Displays an icon that lets you modify the alert.
Archive	Displays an icon that lets you archive the alert.
View	Displays an icon that lets you view the details of the alert.
Run Query	Displays an icon that lets you execute the query linked to the alert.
Name	Displays the name of the private alert.
Alert on	Displays the target entity on which the query is executed.
Status	Displays an indication if the alert is active, inactive or archived.
Last Execution	Displays a date/time field that tells you when the alert was last processed by the alert processor.

10.3.5 Creating new private alerts

To create a new private alert:

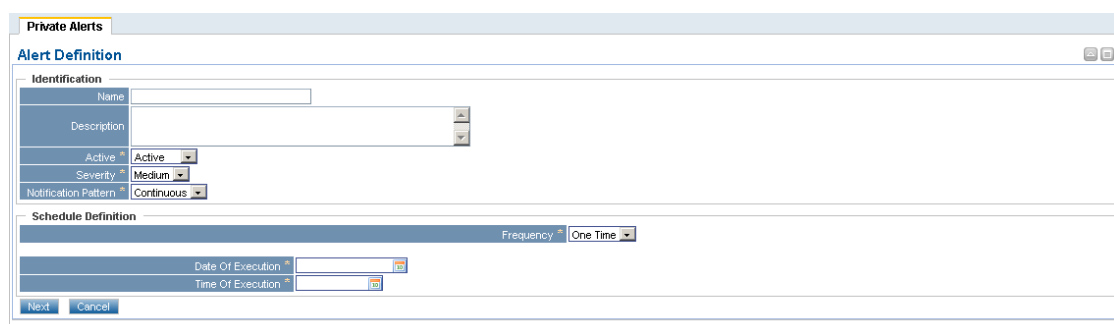

- From the menu bar, go to **Portfolio Analysis > Home > Alerts > Private Alerts**.

The system displays a table with a list of active private alerts.

Note: You have the option at this point to instead view all private alerts (by clicking the **All** tab) or a list of inactive private alerts (by clicking the **Inactive** tab) to create a new private alert.

- Click **Create Alert** button.

The **Alert Definition** screen is displayed.

- Complete the following:

- Identification** section:
 - Name** and **Description** fields: Enter the name of the alert and a description of the alert.
 - Active** field: Set to inactive or active. Inactive alerts are not processed by the alert processor.
 - Severity** field: Set the severity to determine the urgency of follow-up action. This field is mapped to the notification messages priority.
 - Notification Pattern** field: If set to Once, the system will not send any new notification messages to a user if the user has not yet read previously sent messages. If set to Continuous, the system will continue sending notification messages and will not take into account that previous messages have not yet been read.
- Schedule Definition** section: This section lets you define how often you want the system to process the query definition.

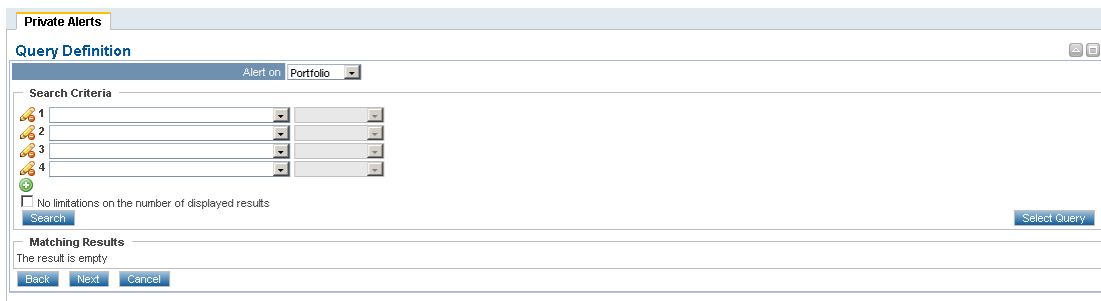

- **Frequency** field: Set the frequency of execution. The available frequencies are:
 - OneTime: Process the alert only one time for a given date and time.
 - Daily: Process the alert once or several times per day.
 - Weekly: Process the alert one or several times per week.
 - Monthly: Process the alert once or several times per month.

If you selected the frequency Daily, Weekly, or Monthly, one or more of the following fields will be displayed and must be completed:

- **Run this schedule once per day only** field: If you leave this option checked, the alert is processed once per day, and you only need to enter a value for the field **Time Of Execution**. If you uncheck this field, you need to enter a start time, an end time, and with the value for Every <n> minutes, how often you want the alert to be processed.
- **Expiration Date** field: Define a date when the alert will no longer be processed.
- **Weekdays** field: Select the weekdays when you want the alert to be processed.
- **Months** field: Select the months when you want the alert to be processed.
- **Monthly Run Frequency** field: Select the type of execution: If you want the alert to only be processed once per month, on a specific date, select the option **Specific Day In Month**. The system will ask you to enter the day of the month. If you want the alert to be processed on specific weekdays, select the option **Specific Weekdays In Month**. The system will ask you to enter one or several weekdays during which the alert will be processed.

4. Click **Next**.

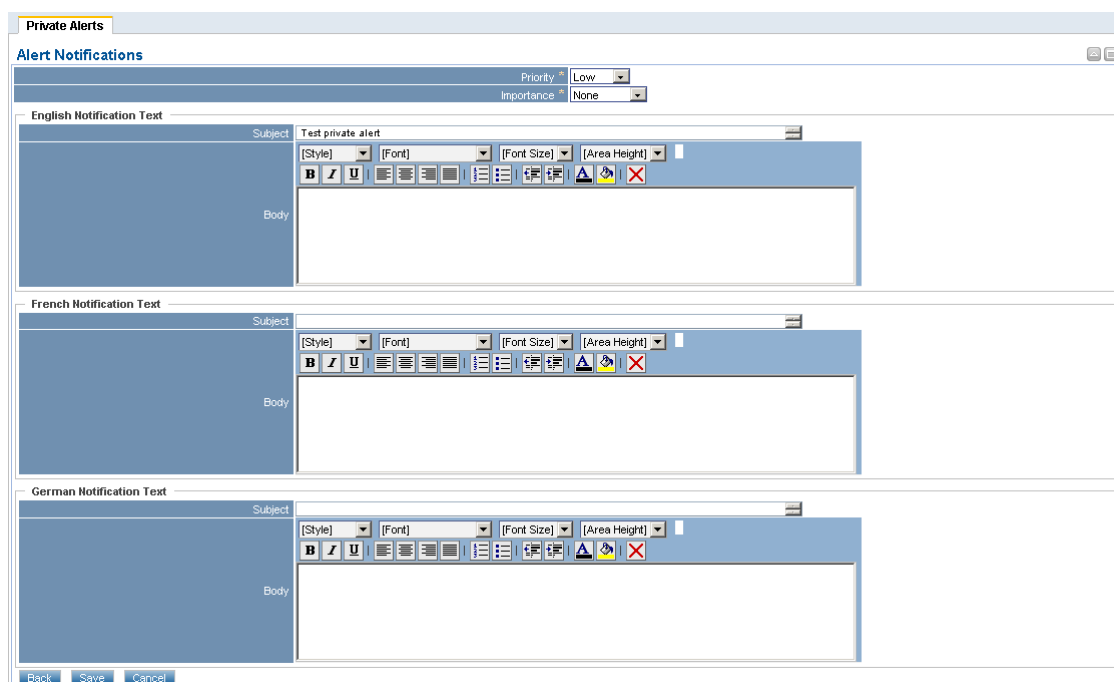

The **Alert Query Definition** screen is displayed.

5. Complete the following:

- **Alert on** field: Select the target entity for your query. Available entities are Portfolio, Client and Instrument.
- **Search Criteria** fields: Similar to other advanced search features in Triple A Plus, you can define individual search criteria on the target entity.
- **Select Query** button lets you select a previously saved query. A separate window opens with the following tabs:
 - **My Queries**: Where you can select a previously saved private query. To pick a query, click on its name. To return to the **Alert Query Definition** screen, click **Cancel**.
 - **Public Queries**: Where you can select a previously saved public query. To pick a query, click on its name. To return to the **Alert Query Definition** screen, click **Cancel**.

- **Pre-Defined Queries:** Where you can select a previously saved pre-defined query. To pick a query, click on its name. To return to the **Alert Query Definition** screen, click **Cancel**.
- Click **Search** to launch the search operation.
Results of your entered criteria are displayed.
 - After completing your query definition, click **Next**.
The **Alerts Notification** screen is displayed where you can define the notification message.

- Complete the following:
 - **Priority** field: Select the priority for this notification. When viewing this notification, the user's follow-up action should be based on the priority that is set here. For example, if you feel that your alert should be followed up as soon as possible, then set a high priority.
 - **Importance** field: Select the importance of this notification. Should the situation that occurred in the system be presented to the user as an Error, Warning, or only Information?
 - **English/French/German Notification sections:** Enter the subject and the text of the notification message that will be sent to the user(s). If you defined a French notification text, and the users set French as their preferred user interface language, then the users will see the notification text in French.
- Click **Save** to save your private alert.
The system saves your alerts and redirects you to the list of private alerts.

10.3.6 Modifying existing private alerts

To modify the details of your private alert:

- From the menu bar, go to **Portfolio Analysis > Home > Alerts > Private Alerts**.

The system displays a table with a list of active private alerts.

Note: You have the option at this point to instead view a list of inactive private alerts (by clicking the **Inactive** tab) to modify.

2. In the Modify column, click the **Modify** icon of the alert that you want to modify.

The system redirects you to the same sequence of steps as creating a new private alert (see section [Creating new private alerts](#)).

10.3.7 Archiving private alerts

When you archive a private alert, you are setting the status of the alert to Archived, which means that it will no longer be displayed in your list of active or inactive private alerts.

To archive a private alert:

1. From the menu bar, go to **Portfolio Analysis > Home > Alerts > Private Alerts**.

The system displays a table with a list of active private alerts.

Note: You have the option at this point to instead view a list of inactive private alerts (by clicking the **Inactive** tab) to archive.

2. In the Archive column, click the **Archive** icon of the alert that you want to archive.

A confirmation screen is displayed asking you to confirm your action.

3. Click **Yes** to archive the alert or **No** to navigate back to the list of private alerts.

10.3.8 Reactivating archived private alerts

Archived private alerts can be reactivated.

To reactivate an archived private alert:

1. From the menu bar, go to **Portfolio Analysis > Home > Alerts > Private Alerts**.

The system displays a table with a list of active private alerts.

2. Select the **Archived** tab.

The system displays the archived private alerts.

3. Click on the **Reactivate** icon of the alert that you would like to reactivate.

The system reactivates the alert by updating it and setting its status to Active. The alert is displayed again with the list of active private alerts.

10.3.9 Viewing details of private alerts

All details of the selected private alert can be displayed in a single window.

To view the details of a private alert:

1. From the menu bar, go to **Portfolio Analysis > Home > Alerts > Private Alerts**.

The system displays a table with a list of active private alerts.

Note: You have the option at this point to instead view all private alerts (by clicking the **All** tab), a list of inactive private alerts (by clicking the **Inactive** tab), or a list of archived private alerts (by clicking the **Archived** tab).

2. In the View column, click the **View** icon of the alert that you want to view.

A screen is displayed with the following details of the private alert:

- Its definition
- Its query

- Its notification message definitions
3. Click **Back** to navigate back to the list of private alerts.

10.3.10 Running the query linked to a private alert

At any time, you can run the query linked to your private alert to check whether this alert definition returns any matches for your data.

To run the query linked to a private alert:

1. From the menu bar, go to **Portfolio Analysis > Home > Alerts > Private Alerts**.

The system displays a table with a list of active private alerts.

Note: You have the option at this point to instead view all private alerts (by clicking the **All** tab), a list of inactive private alerts (by clicking the **Inactive** tab), or a list of archived private alerts (by clicking the **Archived** tab) to run the query.

2. In the Run Query column, click the **Run Query** icon of the desired alert.

The system executes the query linked to the alert and displays a screen with the following information:

- Identification information of the private alert
- Query criteria
- Matching records, if any

3. Click **Back** to navigate back to the list of private alerts.

10.3.11 Viewing notifications sent by private alerts

Each alert definition is processed by the system according to its defined schedule. If there are matches for the query linked to the alert, the system sends out a notification message. You are notified, via the notification indicator, that new notifications have been delivered. The notifications indicator is displayed at the top right of your WUI screen:

You can view your notifications by clicking on the notification indicator. The system then redirects you to the **Portfolio Analysis > Home > Notifications & Messages** view. This view displays the list notifications and messages sent to you:

Notifications & Messages

Delete	R	Category	Follow up	Nature	Sender	Priority	Subject	Sent On
☐				Alert	ASM	Medium	You have portfolios with a return < -3%	Feb 4, 2013 1:15 PM
☐				Alert	ASM	Medium	You have portfolios with a return < -3%	Feb 4, 2013 1:15 PM
☐				Alert	ASM	Medium	You have portfolios with a return < -3%	Feb 4, 2013 1:00 PM
☐				Alert	ASM	Medium	You have portfolios with a return < -3%	Feb 4, 2013 1:00 PM

Results 1 to 4 of 4

Any notifications sent from your private alerts will be shown here; they are identified by their nature "Alert" (in the Nature column). In the image above, you can see that one notification is alerting you that portfolios with return < -3% exist in your managed portfolios.

To view details of your notification, click on the **View** icon (in the View column) of the notification that you want to view. You will see something similar to the following image:

The **Alert Notification Details** screen shows:

- Details of the notification.
- Identification of the alert that the notification is linked to.
- Query results for the alert linked to the notification. The above image shows a query result for portfolios. The view layout is identical for queries with target entity third-party or instrument with the obvious difference that the Matching Results columns will differ from the portfolio search results.

10.3.11.1 Actions from the notifications details view

Depending on the target entity that the alert was defined on, different actions are available. The following table provides details of the target entities and the available actions:

Target Entity	Action
Portfolio	Action - Click on the portfolio code: The system launches a portfolio identification. Action - Select several portfolios by checking the checkbox in front of the line, and clicking on Use In Context : The system redirects you to the dashboard screen with the portfolio analysis scope set to "Query".
Client	Action - Click on the client code: The launches a client identification.
Instrument	Action - Click on the instrument code: The system sets the instrument dimension field to "Instrument" and initializes it with the instrument you selected.

10.3.12 Processing of alerts and matching results

It needs to be stressed that the alert infrastructure of Triple'A Plus implements the following philosophy:

The system processes alerts and determines which alert returns results for a given user. It dispatches notification messages to those users, telling them that *at the moment of processing the alert, results were found*. This can be compared to any other alert system, sending an e-mail to a user group if it determines a certain situation has occurred.

The query linked to the alert is re-executed when the user views the details of the notification message. Since this will occur at a later time, potentially hours, or in some cases, days later, there might be cases where the user no longer has any matching results.

10.4 Managing public alerts

Like private alerts, public alerts can be active, inactive, or archived but they distinguish themselves from private alerts in the following ways:

- They are not only accessible by the user who created them, but are also accessible to all users who have access to the public alert's Data Security Profile.
- They have recipients who will receive the notification messages linked to an alert. A recipient is a manager, third-party, a manager list, or third-party list.
- They can be subscribed to. Like a recipient, a subscriber will receive notifications if the alert processor finds matches for the subscriber when executing the query linked to the alert.

If you have access to public alerts, you do not necessarily have the right to create new public alerts or to update existing ones. It is the decision of the bank to determine and define who has these authorities. To learn more about how to set up accessibility to public alerts, refer to the *Triple'A Plus Web Packaging Reference Guide*.

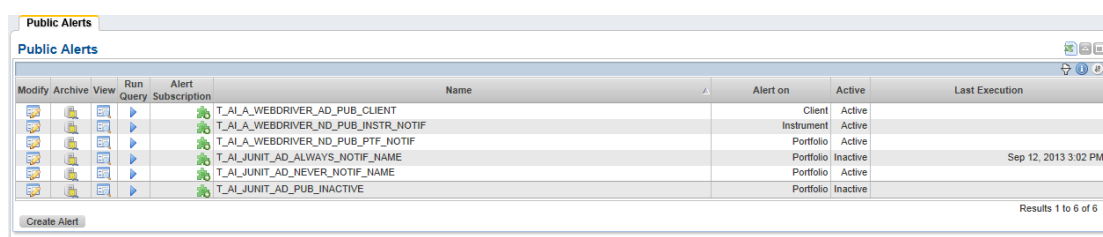

The following sections provide information about:

- [Viewing your public alerts](#)
- [Creating new public alerts](#)
- [Modifying existing public alerts](#)
- [Archiving public alerts](#)
- [Reactivating archived public alerts](#)
- [Viewing details of public alerts](#)
- [Running the query linked to a public alert](#)
- [Subscribing to public alerts](#)
- [Unsubscribing from public alerts](#)
- [Viewing notifications sent by public alerts](#)

10.4.1 Viewing your public alerts

To view your public alerts, go to **Portfolio Analysis > Home > Alerts > Public Alerts** from the menu bar.

If you do not have access rights to create (i.e., manage) public alerts, the system will only display a table with a list of all active and inactive public alerts (as shown in the following image).

Modify	Archive	View	Run Query	Alert Subscription	Name	Alert on	Active	Last Execution
					T_AL_A_WEBDRIVER_AD_PUB_CLIENT	Client	Active	
					T_AL_A_WEBDRIVER_AD_PUB_INSTR_NOTIF	Instrument	Active	
					T_AL_A_WEBDRIVER_AD_PUB_PTF_NOTIF	Portfolio	Active	
					T_AL_JUNIT_AD_ALWAYS_NOTIF_NAME	Portfolio	Inactive	Sep 12, 2013 3:02 PM
					T_AL_JUNIT_AD_NEVER_NOTIF_NAME	Portfolio	Active	
					T_AL_JUNIT_AD_PUB_INACTIVE	Portfolio	Inactive	

Create Alert

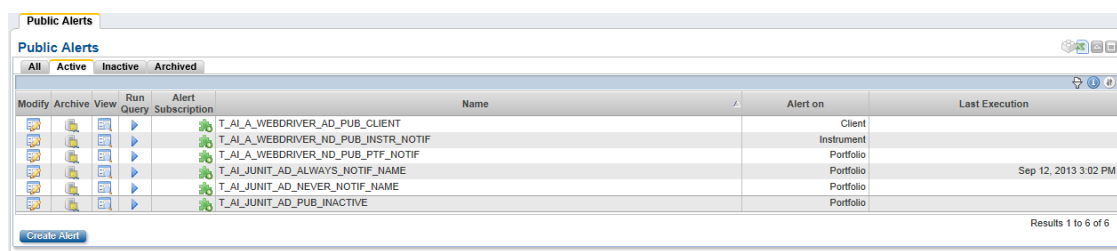

Results 1 to 6 of 6

The following table provides details about what is displayed:

Column name	Description
Modify	Displays an icon that lets you modify the alert. This icon is greyed out (blocked) if you do not have access rights.
Archive	Displays an icon that lets you archive the alert. This icon is greyed out (blocked) if you do not have access rights.
View	Displays an icon that lets you view the details of the alert.
Run Query	Displays an icon that lets you execute the query linked to the alert.
Subscribe	Displays an icon that lets you subscribe to the public alert.
Name	Displays the name of the public alert.
Alert on	Displays the target entity on which the query is executed.
Active	Displays an indication of whether the alert is active or inactive.
Last Execution	Displays a date/time field that tells you when the alert was last processed by the alert processor.

If, however, you have access rights to create (i.e., manage) public alerts, the system gives you access to the following tabs:

- **All** tab: Provides a list of all public alerts.
- **Active** tab (displayed by default): Provides a list of active public alerts.
- **Inactive** tab: Provides a list of inactive public alerts.
- **Archived** tab: Provides a list of archived public alerts.

Modify	Archive	View	Run Query	Alert Subscription	Name	Alert on	Active	Last Execution
					T_AL_A_WEBDRIVER_AD_PUB_CLIENT	Client	Active	
					T_AL_A_WEBDRIVER_AD_PUB_INSTR_NOTIF	Instrument	Active	
					T_AL_A_WEBDRIVER_AD_PUB_PTF_NOTIF	Portfolio	Active	
					T_AL_JUNIT_AD_ALWAYS_NOTIF_NAME	Portfolio	Inactive	Sep 12, 2013 3:02 PM
					T_AL_JUNIT_AD_NEVER_NOTIF_NAME	Portfolio	Active	
					T_AL_JUNIT_AD_PUB_INACTIVE	Portfolio	Inactive	

Create Alert

Results 1 to 6 of 6

The following table provides details about what is available on the **All** tab:

Column name	Description
View	Displays an icon that lets you view the details of the alert.
Run Query	Displays an icon that lets you execute the query linked to the alert.
Subscribe	Displays an icon that lets you subscribe to the public alert.
Name	Displays the name of the public alert.
Alert on	Displays the target entity on which the query is executed.
Active	Displays an indication of whether the alert is active or inactive.

Column name	Description
Last Execution	Displays a date/time field that tells you when the alert was last processed by the alert processor.

The following table provides details about what is available on the **Active** and **Inactive** tabs:

Column name	Description
Modify	Displays an icon that lets you modify the alert. This icon is greyed out (blocked) if you do not have access rights.
Archive	Displays an icon that lets you archive the alert. This icon is greyed out (blocked) if you do not have access rights.
View	Displays an icon that lets you view the details of the alert.
Run Query	Displays an icon that lets you execute the query linked to the alert.
Subscribe	Displays an icon that lets you subscribe to the public alert.
Name	Displays the name of the public alert.
Alert on	Displays the target entity on which the query is executed.
Last Execution	Displays a date/time field that tells you when the alert was last processed by the alert processor.

The following table provides details about what is available on the **Archived** tab:

Column name	Description
Reactivate	Displays an icon that lets you reactivate the alert.
View	Displays an icon that lets you view the details of the alert.
Run Query	Displays an icon that lets you execute the query linked to the alert.
Name	Displays the name of the private alert.
Alert on	Displays the target entity on which the query is executed.

10.4.2 Creating new public alerts

You must have the appropriate access rights to create public alerts.

To create a new public alert:

1. From the menu bar, go to **Portfolio Analysis > Home > Alerts > Public Alerts**.

The system displays a table with a list of active public alerts.

Note: You have the option at this point to instead view all public alerts (by clicking the **All** tab) or a list of inactive public alerts (by clicking the **Inactive** tab) to create a new public alert.

2. Click **Create Alert** button. (Note that this button is greyed out (blocked) if you do not have the appropriate access rights.)

The **Alerts Definition** screen is displayed.

3. Complete the following:

- **Identification** section:
 - **Name** and **Description** fields: Enter the name of the alert and a description of the alert.

- **Active** field: Set to inactive or active. Inactive alerts are not processed by the alert processor.
- **Severity** field: Set the severity to determine the urgency of follow up action. This field is mapped to the notification messages priority.
- **Notification Pattern** field: If set to Once, the system will not send any new notification messages to a user if the user has not yet read previously sent messages. If set to Continuous, the system will continue sending notification messages and not take into account that previous messages have not yet been read.
- **Data Security Profile** field: Only the users who have access to this Data Security Profile will be able to see the public alert.
- **Schedule Definition** section: This section lets you define how often you want the system to process the query definition.
 - **Frequency** field: Set the frequency of execution. The available frequencies are:
 - Once: Process the alert only one time for a given date and time.
 - Daily: Process the alert once or several times per day.
 - Weekly: Process the alert one or several times per week.
 - Monthly: Process the alert once or several times per month.

If you selected the frequency Daily, Weekly, or Monthly, one or more of the following fields will be displayed and must be completed:

Field	Task
Run this schedule once per day only	If you leave this option checked, the alert is processed once per day, and you only need to enter a value for the field Time Of Execution . If you uncheck this field, you need to enter a start time, an end time, and with the value for Every <n> minutes, how often you want the alert to be processed.
Expiration Date	Define a date when the alert will no longer be processed.
Weekdays	Select the weekdays when you want the alert to be processed.
Months	Select the months when you want the alert to be processed.
Monthly Run Frequency	Select the type of execution: If you want the alert to only be processed once per month, on a specific date, select the option Day of Month . The system will ask you to enter the day of the month. If you want the alert to be processed on specific weekdays, select the option Weekdays . The system will ask you to enter one or several weekdays during which the alert will be processed.

4. Click **Next**.

The **Alert Query Definition** screen is displayed.

5. Complete the following:

- **Target Entity** field: Select the target entity for your query. Available entities are Portfolio, Financial Instrument and Third Party.
- **Search Criteria** fields: Similar to other advanced search features in Triple A Plus, you can define individual search criteria on the target entity.
- **Select Query** button lets you select a previously saved query. A separate window opens with the following tabs:

- **My Queries:** Where you can select a previously saved public query. To pick a query, click on its name. To return to the **Alert Query Definition** screen, click **Cancel**.
 - **Public Queries:** Where you can select a previously saved public query. To pick a query, click on its name. To return to the **Alert Query Definition** screen, click **Cancel**.
 - **Pre-Defined Queries:** Where you can select a previously saved pre-defined query. To pick a query, click on its name. To return to the **Alert Query Definition** screen, click **Cancel**.
6. Click **Search** to launch the search operation.
Results of your entered criteria are displayed.
 7. After completing your query definition, click **Next**.
The **Alerts Notification** screen is displayed where you can define the notification message.
 8. Complete the following:
 - **Priority field:** Select the priority for this notification. When viewing this notification, the user's follow-up action should be based on the priority that is set here. For example, if you feel that your alert should be followed up as soon as possible, then set a high priority.
 - **Importance field:** Select the importance of this notification. Should the situation that occurred in the system be presented to the user as an Error, Warning, or only Information?
 - **English/French/German Notification sections:** Enter the subject and the text of the notification message that will be sent to the user(s). If you defined a French notification text, and the users set French as their preferred user interface language, then the users will see the notification text in French.
 9. Click **Next**.
The **Alert Notification Recipients** screen is displayed.
 10. Do one or more of the following to add new recipients of the public alert:
Important: Make sure that the recipients you select already have access to the alert definition. When a recipient reads the notification sent from an alert, the recipient will need to run the query, and consequently have access rights to the alert definition.
 - If you want to add one or more managers, click the **Add** button in the Managers section.
 - If you want to add one or more third-parties, click the **Add** button in the Clients section.
 - If you want to add one or more third-party lists, click the **Add Client List** button in the Manager/Client List section.
 - If you want to add one of more manager lists, click the **Add Manager List** button in the Manager/Client List section.

After adding the new recipients, the **Alert Notification Recipients** screen displays a list of the recipients for each of the recipient categories: Managers, Clients and Manager/Client Lists

11. Click **Save** to save your public alert definition.

10.4.3 Modifying existing public alerts

To modify the details of your public alert:

1. From the menu bar, go to **Portfolio Analysis > Home > Alerts > Public Alerts**.

The system displays a table with a list of public alerts.

2. In the Modify column, click the **Modify** icon of the alert that you want to modify.

The system redirects you to the same sequence of steps as creating a new public alert (see section [Creating new public alerts](#)).

10.4.4 Archiving public alerts

When you archive a public alert, you are setting the status of the alert to Archived, which means that it will no longer be displayed in your list of public alerts.

To archive a public alert:

1. From the menu bar, go to **Portfolio Analysis > Home > Alerts > Public Alerts**.
The system displays a table with a list of public alerts.
2. In the Archive column, click the **Archive** icon of the alert that you want to archive.
A confirmation screen is displayed asking you to confirm your action.
3. Click **Yes** to archive the alert or **No** to navigate back to the list of public alerts.

10.4.5 Reactivating archived public alerts

You can reactivate public alerts provided that you have access rights to public archived alerts.

To reactivate a public alert:

1. From the menu bar, go to **Portfolio Analysis > Home > Alerts > Public Alerts**.
The system displays a table with a list of public alerts.
2. Select the **Archived** tab.
The system displays the archived alerts.
3. Click on the **Reactivate** icon of the alert that you would like to reactivate.
The system reactivates the alert by updating it and setting its status to Active. The alert is displayed again with the list of active/inactive alerts.

10.4.6 Viewing details of public alerts

All details of the selected public alert can be displayed in a single window.

To view the details of a public alert:

1. From the menu bar, go to **Portfolio Analysis > Home > Alerts > Public Alerts**.
The system displays a table with a list of public alerts.
2. In the View column, click the **View** icon of the alert that you want to view.
A screen is displayed with the following details of the public alert:
 - Its definition
 - Its query
 - Its notification message definitions
 - Its recipients
 - Its subscribers
3. Click **Back** to navigate back to the list of public alerts.

10.4.7 Running the query linked to a public alert

At any time, you can run the query linked to your public alert to check whether this alert definition returns any matches for your data.

To run the query linked to a public alert:

1. From the menu bar, go to **Portfolio Analysis > Home > Alerts > Public Alerts**.

The system displays a table with a list of public alerts.

2. In the Run Query column, click the **Run Query** icon of the desired alert.

The system executes the query linked to the alert and displays a screen with the following information:

- Identification information of the public alert
- Query criteria
- Matching records, if any

3. Click **Back** to navigate back to the list of public alerts.

10.4.8 Subscribing to public alerts

To subscribe to a public alert:

1. From the menu bar, go to **Portfolio Analysis > Home > Alerts > Public Alerts**.

The system displays a table with a list of public alerts.

2. In the Subscribe column, click the **Subscribe** icon of the desired alert.

The **Subscribe to a public alert** screen is displayed with the following information:

- **From Date** with the current date as default value. The From Date defines the date that you will start receiving notifications linked to the alert.
- **Till Date** which is, by default, not defined. The Till Date defines the date that you will no longer receive notifications linked to the alert.

3. Do one of the following:

- Click **Subscribe** button to complete the subscription.
- Click **Cancel** button to cancel the operation and return to the list of public alerts.

10.4.9 Unsubscribing from public alerts

To unsubscribe from a public alert:

1. From the menu bar, go to **Portfolio Analysis > Home > Alerts > Public Alerts**.

The system displays a table with a list of public alerts.

2. In the Subscribe column, click the **Unsubscribe** icon of the alert. This icon is only displayed if you are subscribed to the alert; otherwise, it is the **Subscribe** icon that is displayed.

10.4.10 Viewing notifications sent by public alerts

The steps to view notifications sent by public alerts are the same as those for private alerts (see section [Viewing notifications sent by private alert](#)).

11 Identification

The Identification function is the default function launched when executing a context.

It provides you with key information on the entity set in your Context. This information changes depending on the entity set (e.g., Portfolio, Client, Portfolio List, etc.). The aim is to provide you with an overview of the portfolio/client/portfolio list/etc., before you decide to move on with your analysis, by launching a financial function such as a valuation or a return analysis.

In this chapter, you will learn about:

- [Accessing the Identification function](#)
- [Identification Context](#)
- [Identification views](#)

11.1 Accessing the Identification function

There are two ways to access the Identification function:

- [By executing a new Context](#)
- [By selecting the menu item](#) (if the Context is already defined)

11.1.1 By executing a new Context

The Identification function is launched whenever you execute a Context:

1. Select the **Portfolio Analysis** tab.
2. Define a Context by defining an analysis scope (e.g., Portfolio, Client, Portfolio List, etc.), and adapting your Context parameters as needed.
3. Click the **Execute** button to execute the Context.

The system launches the identification and redirects you to **Analysis > Identification** in the menu bar.

11.1.2 By selecting the menu item

If a Context is already defined, you can access the Identification function by selecting the menu item **Analysis > Identification**.

11.2 Identification Context

As for any other function, the information displayed by the Identification function is defined by the Context you have set.

11.2.1 Information displayed

The Identification function displays the following types of information depending on the selected context:

- Information on the selected entity within the analysis scope. This is only the case when Portfolio or Client is selected within the analysis scope.

- A valuation summary. The purpose is to provide an immediate view on the assets comprised in the analysis scope.
- The contact and task list linked to the selected analysis scope entity. This is only the case when Portfolio or Client are selected within the analysis scope.

The context parameter values influence the information displayed within the identification valuation summary in the same manner than they do for the financial function valuation. For detailed information on this, see section [Using the Context section](#) in chapter [Valuation](#).

11.2.2 Context parameter reset

The primary purpose of the identification function is to display the current financial situation of the selected scope. Depending on the module displayed on the screen, some context parameters are reset "behind the scenes" to the default values based on the function originally called. The following sections explain the context parameters used on each function:

- [Using the Context section](#) in chapter [Valuation](#).
- [Using the Context section](#) in chapter [Return](#).
- [Using the Context section](#) in chapter [Order Lists](#).
- [Using the Context section](#) of chapter [Portfolio Activity](#).

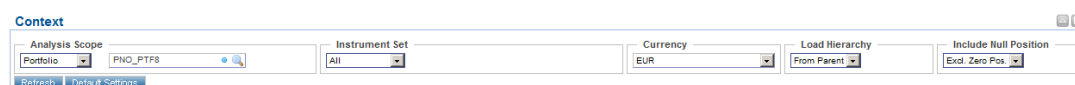

11.3 Identification views

The following sections detail which information is displayed on the identification views:

- [Context information](#)
- [Context: Portfolio](#)
- [Context: Client](#)
- [Context: Manager, Advisor, Portfolio List, Query, All](#)

11.3.1 Context information

Independent of the selected target entity in your analysis scope (Portfolio, client, etc.), the Identification function always provides you with a **Context** section, as shown in the image below:

In this section, you can:

- View the context parameters values.
- Alter the context parameters values and re-launch the identification by clicking the **Refresh** button.

As stated previously, all other information displayed depends on the target entity selected within the context analysis scope and the function originally used.

11.3.2 Context: Portfolio

The following sections explain what other information the Identification function displays, in addition to the **Context** section, when context is set to Portfolio:

- [Portfolio Summary section](#)

- [Portfolio Detail section](#)
- [Portfolio Overview section](#)
- [Contact List section](#)
- [Tasks section](#)

11.3.2.1 Portfolio Summary section

The **Portfolio Summary** section displays key valuation information.

- By clicking the **Valuation Details** button, you launch the Valuation function.
- By clicking the **Exchange rates** button, you open the **Exchange Rate** window. This shows the current exchange rates that have been used to convert the various position currencies to the required reference currency, as specified in the context.

11.3.2.2 Portfolio Detail section

The **Portfolio Detail** section contains the following tab:

- **Details** tab: Key portfolio information.
- **Dashboard** tab: Includes a set of business modules such as Valuation, Compliance, Return, and Portfolio Activity, showing a set of pre-computed extended fields also used within the dashboard function.
- **Owners** tab: Shows the clients that are linked to the portfolio in cases where there are several owners, together with their ownership rules and weights. Only the relationships that are valid on the current day are shown.
- **Cash Accounts** tab: A table displaying all cash accounts linked to this portfolio. For each cash account, the system displays the account currency, the account number, the cash balance expressed in the account currency as well as the context reference currency, and finally the percentual portfolio market value share.
- **Notepads** tab: All notepad records linked to this portfolio.
- **Business Entities** tab: Shows the entities in the business organisation to which the portfolio is linked.

11.3.2.3 Portfolio Overview section

The **Portfolio Overview** section contains the following modules composed of matrices, tables or graphs:

- **Matrix Asset Class Currency**: A matrix displaying a module showing the merged view of the loaded portfolio, showing dynamically the Asset Classes (Stocks, Fixed Income, Funds, Derivatives, Liquidity, Money Market, Forward, and Others) in ordinate, and the Currencies (any position currencies of the portfolio without Others) in abscissa, including per cell the total market value in amount followed by the percentage, with sums at the valuation date. The matrix is sorted by total market value in a descending way.
- **Matrix Asset Class Region**: A matrix displaying a module showing the merged view of the loaded portfolio, showing dynamically the regions (North America, Europe, Japan, Asian-Pacific, Emerging Markets, and Other) in ordinate, and the Currencies (any position currencies of the portfolio without Others) in abscissa, including per cell the total market value in amount followed by the percentage, with sums at the valuation date. The matrix is sorted by total market value in a descending way.
- **Held Assets**: A table displaying a synthesis of the main holdings representing the held instrument positions of the loaded portfolios, with the corresponding asset class, quantity, market value, and percentage of the market value.
- **Graph Asset Class Allocation**: A pie chart showing the distribution in percentage of the total market value by asset class of the loaded merged portfolios. In case of negative values, the system switches to a bar chart showing in ordinate the percentage of the total market value and in abscissa the asset classes, sorted in descending way by percentage of Total Market Value order.

- **Graph Return vs Benchmark Return:** A line chart showing a comparison in percentage of the portfolio cumulated return and benchmark return per subperiod of the loaded merged portfolios.
- **Module Order Lists:** A table containing a collection of horizontally tabbed views detailing the orders of the selected portfolios (one or more portfolios). The tabs are based on the category of orders and are dynamic; that is, if no orders exist for a particular category, then that tab will not be displayed. See section [Order Lists](#) for more details.
- **Module Portfolio Activity:** A module containing two horizontally tabbed views detailing the following:
 - The security transactions of the portfolio activity details with dynamic tables based on the operation nature and the instruments related to them. The tables according to the operation nature are **All, Security Buy/Sell, Forex, Money Market, Income, Redemption, Security Deposit/Withdrawal, Cash Deposit/Withdrawal, Adjustment, Mgt Fees & Others.**
 - The cash movements tab of the portfolio activity details with dynamic tables based on the currency area and instruments related to them. The tables according to the currency areas are **All, USD, JPY, GBP, AUD, CHF, CAD & Others.**
 - See section [Portfolio Activity](#) for more details.

11.3.2.4 Contact List section

The **Contact List** section displays all contacts had during the last 6 days that are linked to the portfolio.

Refer to *Triple'A Plus Web Task and Contact Management User Guide* for information about viewing and defining contacts in Triple'A Plus.

11.3.2.5 Tasks section

The **Tasks** section displays all tasks linked to the portfolio that have a due date with a value between 6 days ago and 5 days from today, and have a start date and a creation date with a value between 10 days ago and today.

Refer to *Triple'A Plus Web Task and Contact Management User Guide* for information about viewing and defining tasks in Triple'A Plus.

11.3.3 Context: Client

The following sections explain what other information the Identification function displays, in addition to the **Context** section, when context is set to Client:

- [Client Detail section](#)
- [Portfolio Summary section](#)
- [Client Overview section](#)
- [Contact List section](#)
- [Tasks section](#)

11.3.3.1 Client Detail section

The **Client Detail** section contains the following tabs:

- **Details** tab: Key client information.
- **Contact** tab: Phone/fax/telex number and e-mail address client information.
- **Financial Profile** tab: Educational level and financial knowledge/experience client information.
- **Dashboard** tab: Includes a set of business modules such as Valuation, Compliance, Return, and Portfolio Activity, showing a set of pre-computed extended fields also used within the dashboard function.

- **Owned Portfolios** tab: Shows all portfolios to which the client is related via an ownership rule.
- **Cash Accounts** tab: A table displaying all cash accounts linked to the client's portfolios. The information made available is the same as when context is set to portfolio (see section [Portfolio Detail section](#)).
- **Notepads** tab: All notepad records linked to this portfolio.
- **Business Entities** tab: Shows all entities in the business organisation to which the portfolio is related.

11.3.3.2 Portfolio Summary section

The **Portfolio Summary** section displays key valuation information for all portfolios linked to the client.

- By clicking the **Valuation Details** button, you launch the Valuation function.
- By clicking the **Exchange rates** button, you open the **Exchange Rate** window. This shows the current exchange rates that have been used to convert the various position currencies to the required reference currency, as specified in the context.

11.3.3.3 Client Overview section

The **Client Overview** section contains the following modules composed of matrices, tables or graphs:

- **Matrix Asset Class Currency**: A matrix displaying a module showing the merged view of the loaded client's portfolios, showing dynamically the Asset Classes (Stocks, Fixed Income, Funds, Derivatives, Liquidity, Money Market, Forward, and Others) in ordinate, and the Currencies (any position currencies of the portfolio without Others) in abscissa, including per cell the total market value in amount followed by the percentage, with sums at the valuation date. The matrix is sorted by total market value in a descending way.
- **Graph Asset Class Allocation**: A pie chart showing the distribution in percentage of the total market value by asset class of the loaded merged client's portfolios. In case of negative values, the system switches to a bar chart showing in ordinate the percentage of the total market value and in abscissa the asset classes, sorted in descending way by percentage of Total Market Value order.
- **Graph Currency Allocation**: A pie chart showing the distribution in percentage of the total market value by currency of the loaded merged client's portfolios. In case of negative values, the system switch to a bar chart showing in abscissa the percentage of the total market value and in ordinate the currencies, sorted in descending way by percentage of Total Market Value order.

11.3.3.4 Contact List section

The **Contact List** section displays all contacts had during the last 6 days that are linked to the client.

Refer to *Triple'A Plus Web Task and Contact Management User Guide* for information about viewing and defining contacts in Triple'A Plus.

11.3.3.5 Tasks section

The **Tasks** section displays all tasks linked to the client that have a due date with a value between 6 days ago and 5 days from today, and have a start date and a creation date with a value between 10 days ago and today.

Refer to *Triple'A Plus Web Task and Contact Management User Guide* for information about viewing and defining tasks in Triple'A Plus.

11.3.4 Context: Manager, Advisor, Portfolio List, Query, All

If the analysis scope is set to All, Manager, Advisor, Portfolio List, or Query, the identification limits itself to displaying the **Portfolio Summary** view, thus presenting the key valuation information for the selected scope:

- **Manager:** The valuation is done on all portfolios that have the selected manager as administrative manager.
- **Advisor:** The valuation is done on all portfolios that have the selected manager as commercial manager.
- **Portfolio List:** The valuation is done on all portfolios that constitute the portfolio list.
- **All:** The valuation is done on all portfolios.

Note that all definitions above are conditioned by the security accessibility of the data. All portfolios, for example, stand for all accessible portfolios.

12 Valuation

The Valuation function displays a summary and details of the positions in one or more portfolios at a given date. For detailed information about the valuation function, see *Triple'A Plus Core User Guide*. For a list of the functions required for configuring the valuation function in the WUI, see *Triple'A Plus Web Reference Packaging Guide*.

In this chapter, you will learn about:

- [Accessing the Valuation function](#)
- [Using the Context section](#)
- [Valuation results](#)

12.1 Accessing the Valuation function

To access the Valuation function:

1. Select the **Portfolio Analysis** tab.
2. From the menu bar, go to **Analysis > Valuation**.

12.2 Using the Context section

To specify the nature of the valuation to be performed, use the **Context** section of the Valuation work area. The **Context** section consists of the following tabs:

- [Basic tab](#)
- [Advanced tab](#)

12.2.1 Basic tab

1. Complete the fields in the **Basic** tab as follows:

Item	Selection	Description
Analysis Scope	All Portfolio Client Manager Advisor Portfolio List Query	Determines the portfolio or set of portfolios to be included in the valuation. The default value is Portfolio.
Instrument Set	All Instrument Instrument List	You can use these options to restrict the valuation to an instrument or a set of instruments. The default value is All.
Date	<date>	Date that the valuation is based on. The default value is the current date.
Currency	<currency code>	Currency that the valuation is to be shown in. If the Analysis Scope has been set to Portfolio, Client, Manager, Advisor, or Portfolio List, the currency will default to the currency of the selected item. If the Analysis Scope has been set to All or Query, the currency will default to the system currency.

Item	Selection	Description
Load Hierarchy	No From Parent	If the From Parent option is selected, the portfolio's child portfolios will be included in the valuation. This will default to From Parent.
Consolidation	Merged Detailed	If you select the Merged option, the positions of several portfolios are presented as if they were just one portfolio. The Detailed option keeps the positions separated. The default value is Detailed.

2. Do one of the following:

- Click the **Advanced** tab to further define the context for your analysis (see section [Advanced tab](#)).
- Click **Execute** button to perform the valuation.

12.2.2 Advanced tab

Complete the fields in the **Advanced** tab as follows:

Item	Selection	Description
Min Status Max Status	<all statuses from Cancelled through to Post Accounted>	Select the minimum and maximum statuses of the retrieved positions. The default value for both is Accounted.
Include Null Position	Excl. Zero Pos Incl. Zero Pos.	Exclude or include positions with a zero quantity. The default value is Excl. Zero Pos.
Merge Status	Keep Status Merge Status	Merge Status merges positions with different statuses according to the MERGE_STATUS_RULE parameter. Keep Status keeps positions with different statuses separate. The default value is Keep Status.
Logical Fusion Rule	<Default> Basic PosCurr Deposit PosCurr/Deposit	Indicates which criteria are used to identify a position. The default value is Basic. <Default> uses the POS_LOGICAL_ID_RULE system parameter setting. Basic uses Portfolio and Instrument. PosCurr uses position currency. Deposit uses the custodian. PosCurr/Deposit uses both position currency and custodian.
Position Netting	Keep Positions Close Positions	Close Positions merges negative and positive positions. The default value is Close Positions.
Fund Splitting	<None> Splitting Forced Composition Splitting Method 1 Splitting Method 2 Splitting Method 3	Funds can be split into their components. The default value is <None>.
Accounting / Risk View	Accounting View Risk View	Either risk positions or accounting positions are displayed.
Option Risk	No Exposure Full Exposure Delta Exposure	When risk positions are displayed, the field indicates how the exposure is generated.

12.3 Valuation results

This section explains the information displayed in the valuation result views, and contains the following subsections:

- [Summary screen](#)
- [Detailed screen](#)

Regarding Risk View and Fund Splitting:

- Risk positions and fund splitting positions are classified with their own criteria, which impact summary views and the list of positions.
- Cost price and cost amount of a risk position are calculated with no links to their original accounting position therefore, cost amounts and unrealized P&L on a risk position are not significant. Cost amounts and P&L at portfolio level (or other levels) on a risk view or fund splitting are also not significant.
- Market value of risk positions is calculated by the risk view process. Most of the time, the market value of an accounting position is the same as the sum of its risk positions. If there is a different value, refer to the *Triple'A Plus Core Financial Instrument Guide*; this difference can be due to incorrect instrument definitions or a limitation.

12.3.1 Summary screen

If you set the **Analysis Scope** option in the **Context** section to All (portfolios), Manager, Advisor, Portfolio List, or Query, when you execute your valuation, the results are displayed using a summary screen.

The top of the summary screen contains the same **Context** section that was described in section [Using the Context section](#). The options in this section are still editable.

The **Summary Views** section is a collection of horizontally tabbed views summarizing various characteristics of the positions in the valuation:

- **Portfolio** and **Instrument** tabs: These tabs contain tables that summarise the positions by portfolio and instrument respectively. Click the portfolio or instrument hyperlink to access a screen providing detailed information. The valuation will then be restricted to the selected portfolio or instrument.
- **Rating, Sector, Region, Duration, and Maturity** tabs: These tabs present information in matrix format. There is also a graph section that is collapsed by default: click the **Unhide** button to view it.

Below the tabs, the **Summary Views** section also contains the **Exchange Rate** button. Click this button to open the **Exchange Rate** window. This shows the current exchange rates that have been used to convert the various position currencies to the required reference currency, as specified in the context.

12.3.2 Detailed screen

The detailed result screen is displayed in the following cases:

- If you select a portfolio or instrument from the summary screen (as described in section [Summary screen](#)).
- If before executing the valuation, you set the **Analysis Scope** option in the **Context** section to Portfolio or Client.

The detailed screen contains several sections, described in the section below.

12.3.2.1 Context

The **Context** section is the same section that was described in section [Using the Context section](#).

If you arrived at the detailed screen by selecting a portfolio or instrument from the summary screen, the Context section is not editable, and you can use the **Back to Summary** button to return to the summary screen.

If you arrived at the detailed screen directly as a result of executing a valuation on a Portfolio or Client, the Context section is editable.

12.3.2.2 Portfolio or Client

If you arrived at the detailed screen directly as a result of executing a valuation on a Portfolio or Client, a **Portfolio** or a **Client** section is included, and displays basic portfolio or client information.

If you arrived at the detailed screen by selecting a portfolio from the summary screen, the **Portfolio** section is included, and displays basic portfolio information. If you selected an instrument instead, this section will not appear.

12.3.2.3 Summary Views

The **Summary Views** section is the same section that was described in the [Summary screen](#) section.

12.3.2.4 List of Positions

The **List of Positions** section contains a collection of horizontally tabbed views detailing the positions in the valuation. The tabs are based on asset class and are dynamic; that is, if no positions exist for a particular asset class, then that tab will not be displayed.

In all tabs except **Liquidity** and **Forwards**, there are **Buy** and **Sell** checkboxes next to each position and an **Initiate Order** button underneath all of the positions.

Checkboxes for Initiate Orders are:

- not available on risk positions and fund splitting positions. No orders can be generated on positions not held.
- available on hierarchy levels (portfolio, asset class, sub-asset class, currency). By selecting a checkbox at a hierarchy level, every hierarchy level and position under it are automatically selected.

Click the tick boxes indicating the instruments you wish to buy or sell, and then click the Initiate Order button. This will create and take you to an Order Session consisting of the required instruments.

13 Held Assets

The purpose of the Held Assets function is to enable you to see which portfolios are holding a security and have access to Initiate Order. The Held Assets function displays a detailed list of positions in one or more portfolios at a given date. This function is based on the Valuation function. For detailed information about the calculations, see section [Valuation](#).

In this chapter, you will learn about:

- [Accessing the Held Assets function](#)
- [Using the Context section](#)
- [Held Assets results](#)

13.1 Accessing the Held Assets function

To access the Held Assets function:

1. Select the **Portfolio Analysis** tab.
2. From the menu bar, go to **Analysis > Held Assets**.

13.2 Using the Context section

See section [Using the Context section](#) in chapter [Valuation](#).

13.3 Held Assets results

The **List of Positions** section contains a collection of horizontally tabbed views detailing the positions in the valuation. The tabs are based on asset class and are dynamic; that is, if no positions exist for a particular asset class, then that tab will not be displayed.

In all tabs except **Liquidity** and **Forwards**, there are **Buy** and **Sell** checkboxes next to each position and an **Initiate Order** button underneath all of the positions.

Checkboxes for Initiate Orders are:

- not available on risk positions and fund splitting positions. No orders can be generated on positions not held.
- similar to the Valuation function, available on hierarchy levels (portfolio, asset class, sub-asset class, currency). By selecting a checkbox at a hierarchy level, every hierarchy levels and positions under it are automatically selected.

Click the checkboxes indicating the instruments you wish to buy or sell, and then click the **Initiate Order** button. This will create and take you to an Order Session consisting of the required instruments.

Regarding Risk View and Fund Splitting:

- Unlike the Valuation function, a risk position (or fund splitting position) is still linked to its original position.
- Risk positions are displayed as a tree view after their parent position. By default, risk positions are collapsible.
- For a position that does not lead a risk position, the risk position is the position itself.
- Parent positions are positions held in the portfolio. Risk positions are positions generated by the risk on held positions.

- Shown Market value at parent position is the sum of its risk positions. If there is a different value in the accounting view, refer to the *Triple'A Plus Core Financial Instrument Guide*; this difference can be due to incorrect instrument definitions or a limitation.
- For information about impact on cost amount & P&L, see chapter [Valuation](#).

14 Return

This chapter explains how to use the Return function:

- [Overview](#)
- [Accessing the Return function](#)
- [Using the Context section](#)
- [Using the Return Summary Views section](#)
- [Using the Return Detailed Views section](#)
- [Focus – Return and consolidation methods](#)
- [Focus - Return for a Portfolio List, Advisor, Manager, or Query](#)

14.1 Overview

The Return function allows you to analyse the return for portfolios between two dates defining the period of analysis.

It displays information about initial and final market values, return, and profit and loss, but also contains details for each effect for the global period and per monthly periods. The detailed effects are, for example, the capital effect, currency effect, investment and withdrawal.

For monthly analysis, the Return function provides the values for the month in question, but also the value cumulated from the beginning of the period of analysis until the end of the month.

If the portfolio is associated with a benchmark, the return of the benchmark is also displayed to allow a comparison with the portfolio.

14.2 Accessing the Return function

To access the Return function:

1. Select the **Portfolio Analysis** tab.
2. From the menu bar, go to **Analysis > Return**.

14.3 Using the Context section

To specify the nature of the Return to be performed, use the **Context** section of the Return work area. The **Context** section contains the following options:

Context item	Selection	Description
Analysis Scope	All Portfolio Client Manager Advisor Portfolio List Query	Determines the portfolio or set of portfolios to be included in the return. The default value is Portfolio.

Context item	Selection	Description
From	<date>	Date defining the beginning of the period of the return analysis. From Date must be a date that occurs before the Till Date.
Till	<date>	Date defining the end of the period of the return analysis. The default is the current date.
Currency	<currency code>	The currency that the amounts are to be shown in. If the Analysis Scope has been set to Portfolio, Client, Manager, Advisor, or Portfolio List, the currency will default to the currency of the selected item. If the Analysis Scope has been set to All or Query, the currency will default to the system currency.
Load Hierachy	No From Parent	If the From Parent option is selected, the portfolio's child portfolios will be included in the return. The default value is From Parent.
Consolidation	Merged Detailed Detailed Children	The default value is Detailed. Depending on the Analysis Scope option selected, the following choices are available. Analysis Scope = Portfolio, Portfolio List, Advisor, Manager or Query: Detailed, Detailed Children. Analysis Scope = Client: Merge, Detailed, Detailed Children. See the following table for more information about consolidation.

The following table provides information about the specific case of consolidation:

Analysis Scope	Values and behaviours
Portfolio, Portfolio List, Advisor, Manager	Detailed: - If Load Hierachy = From Parent: The positions of the portfolio and child portfolios are merged. In the Return function, only the portfolio selected is displayed, and it presents the merged result of the portfolio hierarchy. - If Load Hierachy = No: Only the portfolio selected is processed. Detailed Children: - If Load Hierachy = From Parent: The return analysis is performed for each portfolio of the hierarchy, and the results are presented by portfolio. In the summary view, the portfolio hierarchy is presented as a tree. - If Load Hierachy = No: Only the portfolio selected is processed.

Analysis Scope	Values and behaviours
Client	Merge: - All portfolios owned directly and/or indirectly by the client (depending on the choice selected within context) are merged for return analysis. The results of the return analysis are presented at client level only, without detail per portfolio. Detailed: - The return analysis is computed and presented per portfolio. - For a portfolio participating in a portfolio hierarchy, the same method as detailed above for Portfolio, Portfolio list, Advisor, Manager, and Query is applied. Detailed Children: - The return analysis is computed and presented per portfolio. - For a portfolio participating in a portfolio hierarchy, the same method as detailed above for Portfolio, Portfolio list, Advisor, Manager, and Query is applied.

14.4 Using the Return Summary Views section

The **Return Summary Views** section presents a summary of the main values of the return analysis, according to how you defined the analysis context.

The following table explains what information is displayed in each column:

Column name	Description
Portfolio	If Analysis Scope is Portfolio, Portfolio List, Advisor, Manager, or Query: The portfolio name is displayed If Analysis Scope is Client and Consolidation not Merged: The portfolio name is displayed. If Analysis Scope is Client and Consolidation Merged: The client name is displayed. For Analysis Scope set to Portfolio List, Advisor, Manager, or Query, and hyperlink allows drilling down to the return analysis results for the selected portfolio.
Type	Type of the portfolio.
Initial Market Value	Market value at From Date defined in the context.
Final Market Value	Market value at Till Date defined in the context.
P&L	Profit and loss between From Date and Till Date.
Portfolio Return	Return of the portfolio between From Date and Till Date.
Benchmark	Denomination of the benchmark linked to the portfolio.
Benchmark Return	Return of the benchmark between From Date and Till Date.
Portfolio Link Nature	Applicable if Analysis Scope = Client.
Ownership Rule	Applicable if Analysis Scope = Client.
Ownership Percentage	Applicable if Analysis Scope = Client.

14.5 Using the Return Detailed Views section

The **Return Detailed Views** section contains the following tabs:

- [Global Overview tab](#)
- [Return Monthly and Cumulated View tab](#)
- [P&L Monthly and Cumulated View tab](#)

14.5.1 Global Overview tab

The **Global Overview** tab of the **Return Detailed Views** section presents two tables: **Market Value & PL** and **Returns & Effects**. You can use this tab is to understand the effects and elements of the market value variation, profit and loss, and return for the period of analysis selected.

The Market Value & PL table displays the final and initial market values, and the different elements explaining the variation from the initial market value at the From Date to the final market value at the Till Date. The profit and loss is detailed by different effects, capital, currency, fees and taxes, and income, and between realized and unrealized for capital and currency effects.

The Return & Effects table provides the return of the portfolio versus its benchmark (assuming that a benchmark has been defined for the portfolio), and the effects explaining the composition of the return with capital, currency, income, fees and taxes, and cross effects.

The following table explains what information is displayed in the columns of the Market Value & PL table:

Column name	Description
Portfolio	If Analysis Scope is Portfolio, Portfolio List, Advisor, Manager, or Query: The portfolio name is displayed. If Analysis Scope is Client and Consolidation not Merged: The portfolio name is displayed. If Analysis Scope is Client and Consolidation Merged: The client name is displayed.
Initial Market Value	Market value at From Date.
Profit & Losses	Profit and losses between From Date and Till Date.
Realized Capital P&L	Realized capital P&L between From Date and Till Date.
Unrealized Capital P&L	Unrealized capital P&L between From Date and Till Date.
Realized Currency P&L	Realized currency P&L between From Date and Till Date.
Unrealized Currency P&L	Unrealized currency P&L between From Date and Till Date.
Income Effects	Income flows between From Date and Till Date.
Fees & Taxes Effect	Fees & Taxes flows between From Date and Till Date.
Investment/Withdrawal	Net between investment and withdrawal occurring between From Date and Till Date.
Final Market Value	Market Value at Till Date.

The following table explains what information is displayed in the columns of the Return & Effects table:

Column name	Description
Portfolio	If Analysis Scope is Portfolio, Portfolio List, Advisor, Manager, or Query: The portfolio name is displayed. If Analysis Scope is Client and Consolidation not Merged: The portfolio name is displayed. If Analysis Scope is Client and Consolidation Merged: The client name is displayed.

Column name	Description
Portfolio Return	Return of the portfolio between From Date and Till Date.
Benchmark Return	Profit and losses between From Date and Till Date.
Capital Effect	Part of the portfolio return due to capital changes between From Date and Till Date.
Currency Effect	Part of the portfolio return due to currency changes between From Date and Till Date.
Income Effect	Part of the portfolio return due to income changes between From Date and Till Date.
Fees & Taxes Effect	Part of the portfolio return due to fees and taxes between From Date and Till Date.
Cross Effect	Part of the portfolio return cross to all effects above between From Date and Till Date.

14.5.2 Return Monthly and Cumulated View tab

The **Return Monthly and Cumulated View** tab of the **Return Detailed Views** section presents a month-by-month view of the return and cumulated return evolution for the portfolio, and benchmark for the period of analysis. The profit & loss and cumulated profit & loss of the portfolio is also displayed.

For portfolio return, details of effects per period and effects cumulated until each period is also available.

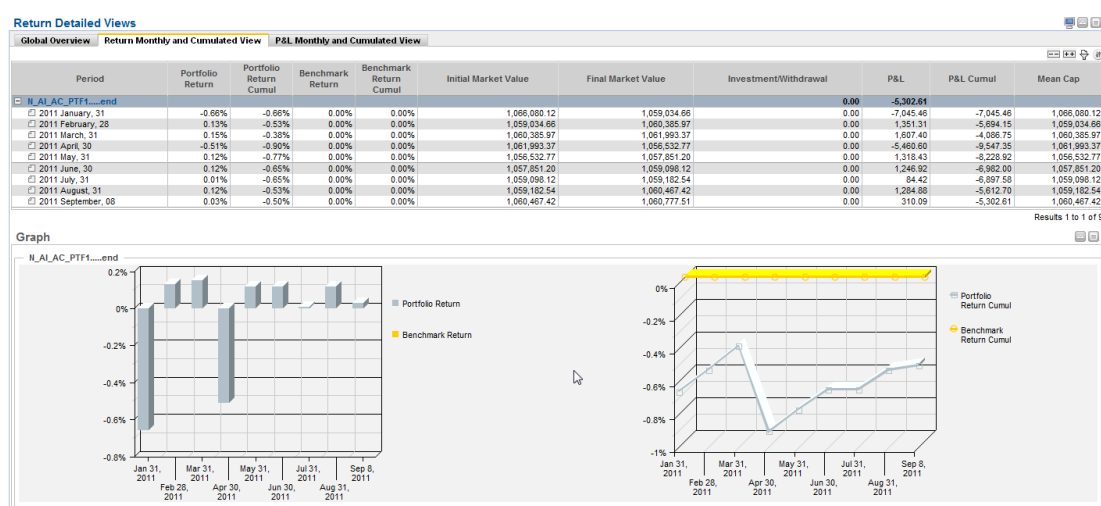

This view includes also the initial and final market values and mean cap for each month.

Two graphs are provided:

- A histogram displays the portfolio return and benchmark return for each month.
- A line graph displays the portfolio cumulated return and benchmark cumulated return at the end of each month.

To view the graphs for a portfolio, or to refresh graphs, click the portfolio name hyperlink.

The following images provide examples:

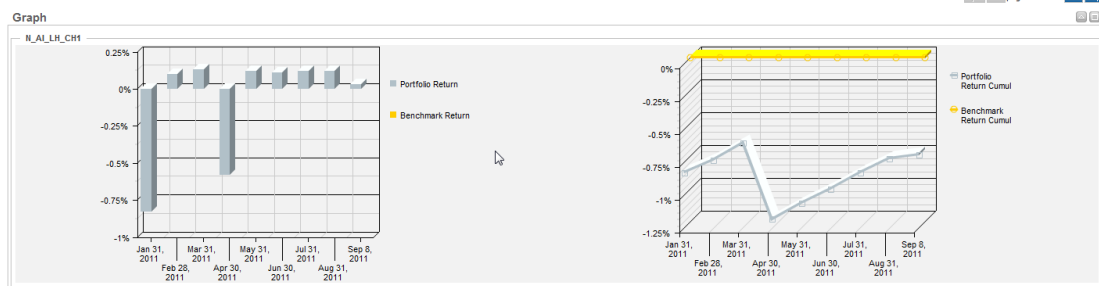

Example - one portfolio

Example - a portfolio parent in a portfolio hierarchy with Load Hierarchy set to From Parent and Consolidation Method set to Detailed Children

The following table explains what information is displayed in table column:

Field name	Description
Period	If Analysis Scope is Portfolio, Portfolio List, Advisor, Manager, Query: The portfolio name and the name of month buckets are displayed via a tree. If Analysis Scope is Client and Consolidation not Merged: The portfolio name and the name of month buckets are displayed via a tree If Analysis Scope is Client and Consolidation Merged: The client name and the name of month buckets are displayed via a tree.
Portfolio Return	Return of the portfolio for the month displayed in the Period column.
Benchmark Return	Return of the benchmark for the month displayed in the Period column.
Capital Effect	Part of the portfolio return due to capital for the month displayed in the Period column.
Currency Effect	Part of the portfolio return due to currency for the month displayed in the Period column.
Income Effect	Part of the portfolio return due to income for the month displayed in the Period column.
Fees & Taxes Effect	Part of the portfolio return due to fees and taxes for the month displayed in the Period column.
Cross Effect	Part of the portfolio return cross to all effects for the month displayed in the Period column.
Portfolio Return Cumul	Return of the portfolio since the From Date until the end of the month displayed in the Period column.
Benchmark Return Cumul	Return of the benchmark since the From Date until the end of the month displayed in the Period column.

Field name	Description
Capital Effect Cumul	Part of the portfolio return due to capital since the From Date until the end of the month displayed in the Period column.
Currency Effect Cumul	Part of the portfolio return due to currency since the From Date until the end of the month displayed in the Period column.
Income Effect Cumul	Part of the portfolio return due to income since the From Date until the end of the month displayed in the Period column.
Fees & Taxes Effect Cumul	Part of the portfolio return due to fees and taxes since the From Date until the end of the month displayed in the Period column.
Cross Effect Cumul	Part of the portfolio return cross to all since the From Date until the end of the month displayed in the Period column.
Initial Market Value	Initial value at the beginning of the month displayed in the Period column.
Final Market Value	Final market value at the end of the month displayed in the Period column.
Investment/Withdrawal	Investment and withdrawal occurring during the month displayed in the Period column.
P&L	Profit and loss for the month displayed in the Period column.
P&L Cumul	Profit and loss since the From Date until the end of the month displayed in the Period column.
Mean Cap	Mean capital invested of the month displayed in the Period column.

14.5.3 P&L Monthly and Cumulated View tab

The **P&L Monthly and Cumulated View** tab of the **Return Detailed Views** section presents the profit & loss and effects explaining profit & loss variation for each month, and the cumulated values since the From Date until the end date of each month.

Two graphs are provided:

- A histogram displays the P&L, capital effect, currency effect, income effect, and fees & taxes effect for each month.
- A line graph displays cumulative P&L, cumulative capital effect, cumulative currency effect, cumulative income effect, and cumulative fees as well as cumulative taxes effect for each month.

The following table explains what information is displayed in table column:

Field name	Description
Period	If Analysis Scope is Portfolio, Portfolio List, Advisor, Manager, Query: The portfolio name and the name of month buckets are displayed via a tree. If Analysis Scope is Client and Consolidation not Merged: The portfolio name and the name of month buckets are displayed via a tree If Analysis Scope is Client and Consolidation Merged: The client name and the name of month buckets are displayed via a tree.
P&L	Profit and loss for the month displayed in the Period column.
P&L Cumul	Profit and loss since the From Date until the end of the month displayed in the Period column.
Capital Effect	Part of the P&L due to capital for the month displayed in the Period column.

Field name	Description
Currency Effect	Part of the P&L due to currency for the month displayed in the Period column.
Income Effect	Part of the P&L due to income for the month displayed in the Period column.
Fees & Taxes Effect	Part of the P&L due to fees and taxes for the month displayed in the Period column.
Capital Effect Cumul	Part of the P&L due to capital since the From Date until end of the month displayed in the Period column.
Currency Effect Cumul	Part of the P&L due to currency since the From Date until end of the month displayed in the Period column.
Income Effect Cumul	Part of the P&L due to income since the From Date until end of the month displayed in the Period column.
Fees & Taxes Effect Cumul	Part of the P&L due to fees and taxes since the From Date until end of the month displayed in the Period column.

14.6 Focus – Return and consolidation methods

The consolidation methods available and the impact on return analysis depends on how you have set the **Analysis Scope** and **Load Hierarchy** options in the **Context** section.

See the following sections:

- [Portfolio Hierarchy selected and Consolidation set to Detailed or Detailed Children](#)
- [Client selected, and Consolidation set to Merge](#)

14.6.1 Portfolio Hierarchy selected and Consolidation set to Detailed or Detailed Children

If you set the **Load Hierarchy** drop-down menu to **From Parent**, the children of the selected portfolios are loaded so that the return for the portfolio hierarchy can be computed.

This combination is available for all options in the **Analysis Scope** drop-down menu.

14.6.1.1 Consolidation = Detailed

Set the **Consolidation** drop-down menu to **Detailed** to obtain a merged return analysis for the portfolio hierarchy. The return results, based on a merge of the portfolio selected and its children, are presented.

The image below shows an example:

Return

Example - return result merge on a parent portfolio selected in Analysis Scope

14.6.1.2 Consolidation = Detailed Children

Set the **Consolidation** drop-down menu to **Detailed Children** to view a return analysis for each portfolio of the portfolio hierarchy. No merging is performed, and in the **Return Summary Views** section the composition of the portfolio hierarchy is displayed as a tree. In the **Return Detailed Views** section, the results of portfolios are presented as a flat list.

The following images provide some examples:

600114-3		1,918,493.92 EUR	-80,137.93 EUR	-4.01%		0.00%

Results 1 to 3 of 3

Example - Analysis Scope is set to Query (same behaviour for Portfolio List, Advisor, Manager)

In the example above, you can view the details of return for each portfolio of the portfolio hierarchy by selecting the desired portfolio.

14.6.2 Client selected, and Consolidation set to Merge

The **Consolidation** option **Merge** is available only if you have set **Analysis Scope** set to **Client**.

Use this approach to obtain a return analysis at client level, merging all portfolios linked directly or indirectly to the client, depending to the analysis scope.

In this case, the return result merges all portfolios owned by the client, and only one result is presented at client level.

14.7 Focus - Return for a Portfolio List, Advisor, Manager, or Query

If you set the **Analysis Scope** drop-down menu to **Portfolio List, Advisor, Manager** or **Query**, the results (as for any others portfolio analysis function) are presented using two screens.

The first screen shows a **Return Summary View** section for all portfolios loaded. Click the portfolio name hyperlinks in this list to access another screen that shows details for the selected portfolio. To return to the first screen, click the **Back to Summary** button.

15 Performance

This chapter explains how to use the Performance Analysis function:

- [Overview](#)
- [Accessing the Performance functionalities](#)
- [Global](#)
- [Risk Measures](#)
- [Contribution](#)
- [Attribution](#)
- [Intermediate Benchmark Performance Attribution](#)

15.1 Overview

The Performance Analysis function is divided in 5 sub-functions:

- **Global:** Shows the performance and its breakdown into capital/currency/income/fees & taxes effect at the portfolio level.
- **Risk Measures:** Shows the ex-post risk measures of the portfolio.
- **Contribution:** Shows the breakdown of the portfolio return in a market structure.
- **Attribution:** Explains the over-performance of the portfolio against its benchmark as sum of market selection, stock picking and interaction effect.
- **Intermediate Benchmark Performance Attribution:** Provides attribution analysis on multiple levels.

The details on the calculations can be found in the *Triple'A Plus Core Performance Analysis Reference Guide*.

15.2 Accessing the Performance functionalities

To access the Performance functionalities:

1. Select the **Portfolio Analysis** tab.
2. From the menu bar, go to one of the following:
 - **Analysis > Performance > Global.**
Select this sub-function to view the portfolio performance at the global period and sub-period levels, and the various effects such as capital/currency/income/fees & taxes. Proceed to section [Global](#).
 - **Analysis > Performance > Risk Measures.**
Select this sub-function to view the ex-post risk measures of the portfolio. Proceed to section [Risk Measures](#).
 - **Analysis > Performance > Contribution.**
Select this sub-function to view the breakdown of the portfolio return in a market structure. Proceed to section [Contribution](#).
 - **Analysis > Performance > Attribution.**
Select this sub-function to view the over-performance of the portfolio against its benchmark. Proceed to section [Attribution](#).
 - **Analysis > Performance > Intermediate Benchmark Performance Attribution.**
Select this sub-function to view the attribution analysis on multiple levels. Proceed to section [Intermediate Benchmark Performance Attribution](#).

15.3 Global

The Global sub-function shows the portfolio performance at the global period and sub-period levels based on various effects such as capital/currency/income/fees & taxes.

15.3.1 Using the Context section

Use the options in the **Context** section to define the context for the global analysis, as explained in the following sections:

- [Basic tab](#)
- [Advanced tab](#)

15.3.1.1 Basic tab

The following table explains how to use the options in the **Basic** tab:

Field	Definition
Analysis Scope	Allows the definition of the range of portfolios to be analysed. Possible values are: Portfolio Client (i.e., all portfolios linked to the client) Manager (i.e., all portfolios linked to a manager) Advisor (i.e., all portfolios linked to an advisor) Portfolio List Query (i.e., all portfolios in the result of a query)
From Date	The start date of the analysis. By default, the end of the previous year.
Till Date	The end date of the analysis. By default, the current date.
Currency	The currency in which the results are calculated.
Load Hierarchy	Defines the treatment of portfolio hierarchies, which are defined by a parent/child relationship: No: Only the positions of the parent portfolio are loaded. From Parent: The positions from the child portfolios are also loaded.
Consolidation	Defines how the result is displayed. Merged: All portfolios are merged together, and only one result at this level is shown. Detailed: Each portfolio is shown individually. In case of hierarchies, the positions are merged at the parent level. Detailed Children: Each portfolio is shown individual. In case of hierarchies, parent and child portfolios are shown separately. Merged TWR: Displayed as for the Merged option. The calculation of the return is done by temporarily creating a virtual portfolio which contains all positions.

15.3.1.2 Advanced tab

The following table explains how to use the options in the **Advanced** tab:

Field	Definition
P&L Method	Determines the method of return calculation for positions that have been opened before the start date.
Dynamic Weight	Determines the calculation of the return of the benchmark strategy.
Accounting /Risk View	Defines whether positions in futures and forwards are split up.

Field	Definition
Frequency	Defines the creation of the sub-periods. Possible choices are: Day, Month, Quarter, Semester, Year.
Strategy Link	You can either use the strategies, which are linked to the portfolio, or select a benchmark individually. Default Link: Use the strategies, which are linked to the portfolio. The links can be restricted by their link nature and priority (min/max). Forced Link: Select a portfolio, an instrument, or a strategy as benchmark.

15.3.2 Result

Having defined the context for the analysis, click **Execute** to view the result.

The result for a portfolio consists of:

- The portfolio banner, with some static information on the portfolio
- The **Portfolio Summary Views** section, with the results for the total period.
- The **Global Details per Portfolio** section, with the results per sub-period.
 - The **Return** tab displays Initial and Final Market Values, Flows, Profit and Loss, and the decomposition of the profit and loss into Capital P&L (total, realized, unrealized), currency P&L (total, realized, unrealized), income, and fees & taxes. A graph for the display of monthly and cumulative portfolio and benchmark return is also available.
 - The **Effect** tab shows the monthly and cumulative returns, the monthly and cumulative over-performance, as well as the return effects (capital, currency, income, fees & taxes), monthly and cumulative. Graphs are provided to show the monthly and cumulative return effects.

In case the function is called for a single portfolio with Load Hierarchy set to From Parent, or for a client, manager, advisor, list or query with Consolidation Mode set to Detailed or Detailed Children, the system first displays only the **Portfolio Summary Views** section with one line per portfolio. By clicking the portfolio code, you can access the **Global Details per Portfolio** section.

15.4 Risk Measures

The Risk Measures sub-function displays the risk measures (ex-post) of the portfolio.

15.4.1 Using the Context section

Use the options in the **Context** section to define the context for the risk measures (ex-post), as explained in the following sections:

- [Basic tab](#)
- [Advanced tab](#)

15.4.1.1 Basic tab

The following table explains how to use the options in the **Basic** tab:

Field	Definition
Analysis Scope	Allows the definition of the range of portfolios to be analysed. Possible values are: Portfolio Client (i.e., all portfolios linked to the client) Manager (i.e., all portfolios linked to a manager) Advisor (i.e., all portfolios linked to an advisor) Portfolio List Query (i.e., all portfolios in the result of a query) Instrument Instrument List Strategy
From Date	The start date of the analysis. By default, the end of the previous year.
Till Date	The end date of the analysis. By default, the current date.
Currency	The currency in which the results are calculated.
Load Hierarchy	Defines the treatment of portfolio hierarchies, which are defined by a parent/child relationship: No: Only the positions of the parent portfolio are loaded. From Parent: The positions from the child portfolios are also loaded.
Consolidation	Defines how the result is displayed. Merged: All portfolios are merged together, and only one result at this level is shown. Detailed: Each portfolio is shown individually. In case of hierarchies, the positions are merged at the parent level. Detailed Children: Each portfolio is shown individual. In case of hierarchies, parent and child portfolios are shown separately. Merged TWR: Displayed as for the Merged option. The calculation of the return is done by temporarily creating a virtual portfolio which contains all positions.

15.4.1.2 Advanced tab

The following table explains how to use the options in the **Advanced** tab:

Field	Definition
P&L Method	Determines the method of return calculation for positions that have been opened before the start date.
Dynamic Weight	Determines the calculation of the return of the benchmark strategy.
Accounting /Risk View	Defines whether positions in futures and forwards are split up.
Risk Free Instrument	You can use/select an instrument to define the rate of an absolutely risk-free investment linked to a portfolio.
Strategy Link	You can either use the strategies, which are linked to the portfolio, or select a benchmark individually. Default Link: Use the strategies, which are linked to the portfolio. The links can be restricted by their link nature and priority (min/max). Forced Link: Select a portfolio, an instrument, or a strategy as benchmark.

15.4.2 Result

Having defined the context for the analysis, click **Execute** to view the result.

The result for a portfolio consists of:

- The portfolio banner with some static information on the portfolio
- The **Portfolio Summary Views** section with the results for the total period.
- The **Risk Measures (ex-post) per Portfolio** section with the results of the global period displayed for Over Performance, Return Volatility, Benchmark Return Volatility, Sharpe Ratio, Treynor Ratio, Jensen's Alpha, Tracking Error, Information Ratio, Value At Risk, Net Return, Benchmark Return, Average Return, Benchmark Average Return, Benchmark Sharpe Ratio and Beta.

In case the function is called for a single portfolio with Load Hierarchy set to From Parent, or for a client, a manager, an advisor, a list of portfolios or a query with Consolidation Mode set to Detailed or Detailed Children, the system first displays only the **Portfolio Summary Views** section with one line per portfolio. By clicking the portfolio code, you can access the **Global Details per Portfolio** section.

15.5 Contribution

The Contribution sub-function shows the breakdown of the portfolio return in a market structure.

15.5.1 Using the Context section

Use the options in the **Context** section to define the context for the contribution, as explained in the following sections:

- [Basic tab](#)
- [Advanced tab](#)

15.5.1.1 Basic tab

The following table explains how to use the options in the **Basic** tab:

Field	Definition
Analysis Scope	Allows the definition of the range of portfolios to be analysed. Possible values are: Portfolio Client (i.e., all portfolios linked to the client) Manager (i.e., all portfolios linked to a manager) Advisor (i.e., all portfolios linked to an advisor) Portfolio List Query (i.e., all portfolios, which are in the result of a query)
From Date	The start date of the analysis. By default, the end of the previous year.
Till Date	The end date of the analysis. By default, the current date.
Currency	The currency in which the results are calculated.
Load Hierarchy	Defines the treatment of portfolio hierarchies, which are defined by a parent/child relationship: No: Only the positions of the parent portfolio are loaded. From Parent: The positions from the child portfolios are also loaded.

Field	Definition
Consolidation	Defines how the result is displayed Merged: All portfolios are merged together, and only one result at this level is shown Detailed: Each portfolio is shown individually. In case of hierarchies, the positions are merged at the parent level. Detailed Children: Each portfolio is shown individual. In case of hierarchies, parent and child portfolios are shown separately. Merged TWR: Displayed as for the Merged option. The calculation of the return is done by temporarily creating a virtual portfolio which contains all positions.

15.5.1.2 Advanced tab

The following table explains how to use the options in the **Advanced** tab:

Field	Definition
P&L Method	Determines the method of return calculation for positions that have been opened before the start date.
Dynamic Weight	Determines the calculation of the return of the benchmark strategy.
Accounting /Risk View	Defines whether positions in futures and forwards are split up.
Frequency	Defines the creation of the sub-periods. Possible choices are: Day, Month, Quarter, Semester, Year.
Detail Level	Defines the level to which the portfolio filters the result displayed. The possible levels, in order of details provided, are: Global, Grid, Instrument.
Strategy Link	You can either use the strategies, which are linked to the portfolio, or select a benchmark individually. Default Link: Use the strategies, which are linked to the portfolio. The links can be restricted by their link nature and priority (min/max). Forced Link: Select a portfolio, an instrument, or a strategy as benchmark.

15.5.2 Result

Having defined the context for the analysis, click **Execute** to view the result.

The result for a portfolio consists of:

- The portfolio banner, with some static information on the portfolio.
- The **Portfolio Summary Views** section, with the results for the total period.
- The **Contribution Details per Portfolio** section, with the results based on a market structure:
 - The **By Period** tab displays Period / Market Segment, Initial Market Value, Final Market Value, Market Value Variation, Flow, Profit and Loss, Capital P&L, Currency P&L, Real. Capital P&L, Unreal. Capital P&L, Real. Currency P&L, Unreal. Currency P&L, Income, Fees, Taxes, Tax Credit, Mean Capital, Mean Invested Capital, Return, Return Contribution.
 - The **By Market Segment** tab displays Market Segment / Period, Initial Market Value, Final Market Value, Market Value Variation, Flow, Profit and Loss, Capital P&L, Currency P&L, Real. Capital P&L, Unreal. Capital P&L, Real. Currency P&L, Unreal. Currency P&L, Income, Fees, Taxes, Tax Credit, Mean Capital, Mean Invested Capital, Return, Return Contribution.

In case the function is called for a single portfolio with Load Hierarchy set to From Parent, or for a client, a manager, an advisor, a list of portfolios or a query with Consolidation Mode set to Detailed or Detailed Children, the system first displays only the **Portfolio Summary Views**

section with one line per portfolio. By clicking the portfolio code, you can access the **Contribution Details per Portfolio** section.

15.6 Attribution

The Attribution sub-function displays the over-performance of the portfolio against its benchmark.

15.6.1 Using the Context section

Use the options in the **Context** section to define the context for the attribution, as explained in the following sections:

- [Basic tab](#)
- [Advanced tab](#)

15.6.1.1 Basic tab

The following table explains how to use the options in the **Basic** tab:

Field	Definition
Analysis Scope	Allows the definition of the range of portfolios to be analysed. Possible values are: Portfolio Client (i.e., all portfolios linked to the client) Manager (i.e., all portfolios linked to a manager) Advisor (i.e., all portfolios linked to an advisor) Portfolio List Query (i.e., all portfolios in the result of a query) Strategy
From Date	The start date of the analysis. By default, the end of the previous year.
Till Date	The end date of the analysis. By default, the current date.
Currency	The currency in which the results are calculated.
Load Hierarchy	Defines the treatment of portfolio hierarchies, which are defined by a parent/child relationship: No: Only the positions of the parent portfolio are loaded. From Parent: The positions from the child portfolios are also loaded.
Consolidation	Defines how the result is displayed Merged: All portfolios are merged together, and only one result at this level is shown. Detailed: Each portfolio is shown individually. In case of hierarchies, the positions are merged at the parent level. Detailed Children: Each portfolio is shown individually. In case of hierarchies, parent and child portfolios are shown separately. Merged TWR: Displayed as for the Merged option, the calculation of the return is done by temporarily creating a virtual portfolio which contains all positions.

15.6.1.2 Advanced tab

The following table explains how to use the options in the **Advanced** tab:

Field	Definition
P&L Method	Determines the method of return calculation for positions that have been opened before the start date.
Dynamic Weight	Determines the calculation of the return of the benchmark strategy.
Accounting /Risk View	Defines whether positions in futures and forwards are split up.
Frequency	Defines the creation of the sub-periods. Possible choices are: Day, Month. The unit is set to 1 and cannot be edited.
Detail Level	Defines the level at which the portfolio filters the result displayed. The possible levels in order of details provided are: Global, Grid, Instrument.
Strategy Link	You can either use the strategies, which are linked to the portfolio, or select a benchmark individually. Default Link: Use the strategies, which are linked to the portfolio. The links can be restricted by their link nature and priority (min/max). Forced Link: Select a portfolio, an instrument, or a strategy as benchmark.

15.6.2 Result

Having defined the context for the analysis, click **Execute** to view the result.

The result for a portfolio consists of:

- The portfolio banner, with some static information on the portfolio.
- The **Portfolio Summary Views** section, with the results for the total period
- The **Attribution Details per Portfolio** section, with the results based on a market structure:
 - The **By Period** tab displays Period / Market Segment, Initial and Final Market Values, Weight Portfolios, Return Portfolios, Return Contrib. Portfolio, Weight Benchmark, Return Benchmark, Return Contrib. Benchmark, Over Performance, Market Selection Effect, Stock Picking Effect and Interaction Effect.
 - The **By Market Segment** tab displays Market Segment / Period, Initial and Final Market Values, Weight Portfolios, Return Portfolios, Return Contrib. Portfolio, Weight Benchmark, Return Benchmark, Return Contrib. Benchmark, Over Performance, Market Selection Effect, Stock Picking Effect and Interaction Effect.

In case the function is called for a single portfolio with Load Hierarchy set to From Parent, or for a client, a manager, an advisor, a list of portfolios or a query with Consolidation Mode set to Detailed or Detailed Children, the system first displays only the **Portfolio Summary Views** section with one line per portfolio. By clicking the portfolio code, you can access the **Attribution Details per Portfolio** section.

15.7 Intermediate Benchmark Performance Attribution

The Intermediate Benchmark Performance Attribution sub-function shows the intermediate benchmark performance attribution on multiple levels.

15.7.1 Using the Context section

Use the options in the **Context** section to define the context the intermediate benchmark performance attribution, as explained in the following sections:

- [Basic tab](#)
- [Advanced tab](#)

15.7.1.1 Basic tab

The following table explains how to use the options in the **Basic** tab:

Field	Definition
Analysis Scope	Allows the definition of the range of portfolios to be analysed. Possible values are: Portfolio Client (i.e., all portfolios linked to the client) Manager (i.e., all portfolios linked to a manager) Advisor (i.e., all portfolios linked to an advisor) Portfolio List Query (i.e., all portfolios in the result of a query) Strategy
From Date	The start date of the analysis. By default, the end of the previous year.
Till Date	The end date of the analysis. By default, the current date.
Currency	The currency in which the results are calculated.
Load Hierarchy	Defines the treatment of portfolio hierarchies, which are defined by a parent/child relationship: No: Only the positions of the parent portfolio get loaded From Parent: The positions from the child portfolios are also loaded
Consolidation	Defines, how the result is displayed. Merged: All portfolios are merged together, and only one result at this level is shown. Detailed: Each portfolio is shown individually. In case of hierarchies, the positions are merged at the parent level. Detailed Children: Each portfolio is shown individual. In case of hierarchies, parent and child portfolios are shown separately. Merged TWR: Displayed as for the Merged option. The calculation of the return is done by temporarily creating a virtual portfolio which contains all positions.

15.7.1.2 Advanced tab

The following table explains how to use the options in the **Advanced** tab:

Field	Definition
P&L Method	Determines the method of return calculation for positions that have been opened before the start date.
Dynamic Weight	Determines the calculation of the return of the benchmark strategy.
Accounting /Risk View	Defines whether positions in futures and forwards are split up.
Frequency	Defines the creation of the sub-periods. Possible choices are: Day, Month. The unit is set to 1 and cannot be edited.
Performance Attribution Frequency	Specifies the period of performance attribution. The possible values are: Regular, Benchmark, TWR.
Detail Level	Defines the level at which the portfolio filters the result displayed. The possible levels, in order of details provided, are: Global, Grid, Instrument.
Strategy Link	You can either use the strategies, which are linked to the portfolio, or select a benchmark individually. Default Link: Use the strategies, which are linked to the portfolio. The links can be restricted by their link nature and priority (min/max). Forced Link: Select a portfolio, an instrument, or a strategy as benchmark.

15.7.2 Result

Having defined the context for the analysis, click **Execute** to view the result.

The result for a portfolio consists of:

- The portfolio banner, with some static information on the portfolio.
- The **Portfolio Summary Views** section, with the results for the total period.
- The **Intermediate Benchmark Performance Attribution Details per Portfolio** section, with results based on a market structure:
 - The **By Period** tab displays Period / Market Segment, Weight Portfolios, Return Portfolios, Return Contrib. Portfolio, Weight Benchmark, Return Benchmark, Return Contrib. Benchmark, Over Performance, Effect 1, Weight ib1, Effect 1 Value, Effect 2, Effect 2 Value, Effect 3, Effect 3 Value, Market Selection, Stock Picking, and Interaction Effect.
 - The **By Market Segment** tab displays Market Segment / Period, Weight Portfolios, Return Portfolios, Return Contrib. Portfolio, Weight Benchmark, Return Benchmark, Return Contrib. Benchmark, Over Performance, Effect 1, Weight ib1, Effect 1 Value, Effect 2, Effect 2 Value, Effect 3, Effect 3 Value, Market Selection, Stock Picking, and Interaction Effect.

In case the function is called for a single portfolio with Load Hierarchy set to From Parent, or for a client, a manager, an advisor, a list of portfolios or a query with Consolidation Mode set to Detailed or Detailed Children, the system first displays only the **Portfolio Summary Views** section with one line per portfolio. By clicking the portfolio code, you can access the **Intermediate Benchmark Performance Attribution Details per Portfolio** section.

From the **Portfolio Summary Views** section, it is possible to click on the **Details** icon of an effect (from 1 to 5, but only if the corresponding effect is available) to get the same level of details as the **Intermediate Benchmark Performance Attribution Details per Portfolio** section, but directly related to the selected effect and displayed in an additional window.

From the **Intermediate Benchmark Performance Attribution Details per Portfolio** section, it is possible to click on the **Details** icon of an effect (from 1 to 5, but only if the corresponding effect's value is available) to get a focus on the selected effect, displayed in an additional window.

16 Portfolio Activity

This chapter explains how to use the Portfolio Activity function:

- [Overview](#)
- [Accessing the Portfolio Activity function](#)
- [Using the Context section](#)
- [Portfolio Activity Summary Views](#)
- [Portfolio Activity Details Views](#)

16.1 Overview

The Portfolio Activity function allows you to analyse the operations for one or more portfolios between two dates defining the period of analysis.

It displays information about security transactions based on their operation natures and cash movements based on their currency areas.

16.2 Accessing the Portfolio Activity function

To access the Portfolio Activity function:

1. Select the **Portfolio Analysis** tab.
2. From the menu bar, go to **Analysis > Portfolio Activity**.

16.3 Using the Context section

1. Use the options in the **Context** section to define the context for the portfolio activity, as described in the following table:

Item	Selection	Description
Analysis Scope	All Portfolio Client Manager Advisor Portfolio List Query	Determines the portfolio or set of portfolios to be included in the analysis. The default value is Portfolio.
Instrument Set	All Instrument Instrument List	You can use these options to restrict the analysis to an instrument or a set of instruments. The default value is All.
From Date	<date>	The start date of the analysis. By default, the end of the previous year.
Till Date	<date>	The end date of the analysis. By default, the current date.

Item	Selection	Description
Currency	<currency code>	Currency that the valuation is to be shown in. If the Analysis Scope has been set to Portfolio, Client, Manager, Advisor, or Portfolio List, the currency will default to the currency of the selected item. If the Analysis Scope has been set to All or Query, the currency will default to the system currency.
Load Hierarchy	No From Parent	If the From Parent option is selected, the portfolio's child portfolios will be included in the analysis. The default value is From Parent.

- After you have made your selection, click the **Execute** button to perform the analysis.

16.4 Portfolio Activity Summary Views

The **Activity Summary** section consists of two tabs that present summaries of the operations and cash movement that has occurred in the portfolio and the related instruments during the specified period: **By Portfolio** tab **By Instrument** tab.

The following table explains what information is displayed in table columns of the **By Portfolio** tab:

Field name	Description
Portfolio	The portfolio name is displayed. However, if a hierarchical portfolio is selected. The portfolio hierarchy tree is displayed, containing the portfolio names.
Portfolio Link Nature	Link between the portfolio and the client.
No of Transactions	Number of transactions (between From Date and Till Date).
Incoming Amount	Cash flow net amount from operation generating a positive variation of cash balance, and investment/transfer in cash and non-cash assets generating a positive variation of the portfolio value.
Outgoing Amount	Cash flow net amount from operation generating a negative variation of cash balance, and withdrawal/transfer in cash and non-cash assets generating a negative variation of the portfolio value.
Cash Deposits	Cash amount of invest operations.
Cash Withdrawals	Cash amount of withdrawal operations.
Basic Turn-over	Basic Turn-Over = [ABS(SUM(net amount of security buy)) + ABS(SUM(net amount of security sell))] / [SUM(initial cost values) + SUM(net amount of cash investment) - SUM(net amount of cash withdrawal)]
Advanced Turn-over	Advanced Turn-Over = [ABS(SUM(net amount of security buy)) + ABS(SUM(net amount of security sell))] / [SUM(initial cost values) + SUM(time pondered net amount of cash investment) - SUM(time pondered net amount of cash withdrawal)]
Remarks	Explanation of non-calculation of Advanced Turn-over
Ownership Rule	Ownership rule of client on the portfolio.
Percentage of ownership	Percentage of the ownership of the client on the portfolio.

The following table explains what information is displayed in table columns of the **By Instrument** tab:

Field name	Description
Instrument code	Instrument code.

Field name	Description
Instrument	Instrument denomination. Click the Details icon to view instrument details in a separate window.
No of Transactions	Number of transactions (between From Date and Till Date).
Incoming Amount	Cash flow net amount from operation generating a positive variation of cash balance, and investment/transfer in cash and non-cash assets generating a positive variation of the portfolio value.
Outgoing Amount	Cash flow net amount from operation generating a negative variation of cash balance, and withdrawal/transfer in cash and non-cash assets generating a negative variation of the portfolio value.

16.5 Portfolio Activity Details Views

The **Activity Details** section contains the following tabs:

- [Security Transactions](#)
- [Cash Movements](#)

16.5.1 Security Transactions

The **Security Transactions** tab of the **Activity Details** section presents dynamic tables based on the operation nature and the instruments related to them. The tables according to the operation nature are **All, Security Buy/Sell, Forex, Money Market, Income, Redemption, Security Deposit/Withdrawal, Cash Deposit/Withdrawal, Adjustment, Mgt Fees & Others**.

The following table explains what information is displayed in table columns, irrespective of the operation nature (i.e., the field names are the same in each table):

Field name	Description
Portfolio	Portfolio name.
Execution Date	Operation date.
Value Date	Value date.
Accounting Date	Accounting date.
Custody Account	Sub-position nature.
Deposit	Deposit name.
Operation Nature	Operation nature.
Operation Type	Operation type.
Quantity	Operation Quantity. Click the Details icon to view operation details in a separate window.
Instrument	Instrument denomination. Click the Details icon to view instrument details in a separate window.
Instrument Code	Instrument code.
Gross Amount (Op. Ccy.)	Operation gross amount.
Fees And Taxes (Op. Ccy.)	Net amount - gross amount.
Price	Quote.
Status	Operation accounting status.
Operation Code	Operation code.

Field name	Description
Reversal	Reversal nature (Reverse/reversed).

16.5.2 Cash Movements

The **Cash Movements** tab of the **Activity Details** section presents dynamic tables based on the currency area and instruments related to them. The tables according to the currency areas are **All, USD, JPY, GBP, AUD, CHF, CAD & Others**.

The following table explains what information is displayed in table column, irrespective of the operation nature (i.e., the field names are the same in each table):

Field name	Description
Execution Date	Operation date.
Portfolio	Portfolio name.
Value Date	Value date.
Accounting Date	Accounting date.
Debit/Credit	Operation cash quantity.
Account Balance	Cash balance before the oldest operation + cash quantity of operations older than the current.
Operation Nature	Operation nature.
Operation Type	Operation type.
Quantity	Operation Quantity. Click the Details icon to view operation details in a separate window.
Instrument	Instrument denomination. Click the Details icon to view instruments details in a separate window.
Instrument Code	Instrument code.
Price	Quote.
Status	Operation accounting status.
Operation Code	Operation code.
Open Operation id	Open operation identifier.
Reversal	Reversal nature (Reverse/reversed).

17 Future Cash Flow

This chapter explains how to use the Future Cash Flow function:

- [Overview](#)
- [Accessing the Future Cash Flow function](#)
- [Using the Context section](#)
- [Cash Summary Views section](#)
- [Cash Detailed Views section](#)
- [Portfolio section](#)

17.1 Overview

The Future Cash Flow function allows you to analyse the cash flows for portfolios between any given start date and Till Date. Note that the Till Date is defaulted to the start date plus one year.

The function displays information about the cash flow details in the past or cash flows expected in the future on the basis of current positions. This information is displayed according to the currency classification and, where the currency is not supported, the information will be displayed in the 'other' currency details.

The cash flows are displayed in time buckets: Start date, One week, One month, Three Months, Six months, Nine months, and Twelve months respectively. In each bucket, two amounts are shown:

- Cash flow per dates displays the present sum of flows grouped by the same currency.
- Balance per dates contains its own flows plus the sum of flows from the previous period.

17.2 Accessing the Future Cash Flow function

To access the Future Cash Flow function:

1. On the WUI, select the **Portfolio Analysis** tab.
2. From the menu bar, go to **Analysis > Future Cash Flow**.

The Context section of the **Basic** tab is displayed. To continue, see section [Using the Context section](#).

17.3 Using the Context section

Use the options in the **Context** section in the main work area to define the context for your analysis. The Context section contains the following tabs:

- [Basic tab](#)
- [Advanced tab](#)

17.3.1 Basic tab

1. Complete the fields in the **Basic** tab as follows:

Field	Selection	Description
Analysis Scope	All Portfolio Client Manager Advisor Portfolio List Query	Determines the portfolio or set of portfolios to be included. The default value is Portfolio.
Instrument Set	All Instrument Instrument List	Use these options to restrict the execution to an instrument or a set of instruments. The default value is All.
Date	<date>	Date that the execution is based on. The default value is the current date.
Currency	<currency code>	This option is disabled as the cash flow will be displayed according to the currency origin
Load Hierarchy	No From Parent	If the From Parent option is selected, the portfolio's child portfolios will be included in the execution. This will default to From Parent.
Consolidation	Merged Detailed	If you select the Merged option, the positions of several portfolios are presented as if they were just one portfolio. The Detailed option keeps the positions separated. The default value is Detailed.

2. Do one of the following:

- a. Click the **Advanced** tab to further define the context for your analysis (see section [Advanced tab](#)).
- b. Click **Execute** to perform the future cash flow execution.

The **Cash Summary Views** and **Cash Detailed Views** sections are displayed below the **Context** section (see sections [Cash Summary Views section](#) and [Cash Detailed Views section](#)). If you had set the Analysis Scope field to Portfolio, a **Portfolio** section is displayed in addition to either the Cash Summary or Cash Detailed View (see section [Portfolio section](#)).

17.3.2 Advanced tab

The following table describes how to complete the fields in the **Advanced** tab:

Item	Selection	Description
Min Status Max Status	<all statuses from Cancelled through to Post Accounted>	Select the minimum and maximum statuses of the retrieved positions. The default value for both is Accounted.
Merge Status	Keep Status Merge Status	Merge Status merges positions with different statuses according to the MERGE_STATUS_RULE parameter. Keep Status keeps positions with different statuses separate. The default value is Keep Status.

Item	Selection	Description
Logical Fusion Rule	<Default> Basic PosCurr Deposit PosCurr/Deposit	Indicates which criteria are used to identify a position. The default value is Basic. • <Default> uses the POS_LOGICAL_ID_RULE system parameter setting. • Basic uses Portfolio and Instrument. • PosCurr uses position currency. • Deposit uses the custodian. • PosCurr/Deposit uses both position currency and custodian.
Position Netting	Keep Positions Close Positions	Close Positions merges negative and positive positions. The default value is Close Positions.

17.4 Cash Summary Views section

The Cash Summary Views section presents a summary of the main values of the cash flow analysis according to how you defined the analysis context (for information about defining the context, see section [Using the Context section](#)).

The Cash Summary Views section displays a table view of the various cash flows in each time period. The following table explains the information displayed in each column:

Column name	Description
Portfolio	Portfolio name.
Start Date	Sum of cash flows as at the start date.
One week	Sum of cash flows after 1 week.
1 month	Sum of cash flows in a month.
3 months	Sum of cash flows in 3 months.
6 months	Sum of cash flows in 6 months.
9 months	Sum of cash flows in 9 months.
12 months	Sum of cash flows in 12 months.
Portfolio Link Nature	Applicable if Analysis Scope = Client.
Ownership Rule	Applicable if Analysis Scope = Client.
Ownership Percentage	Applicable if Analysis Scope = Client.

17.5 Cash Detailed Views section

The Cash Detailed Views section is a collection of dynamic, horizontally-placed, tabbed views summarizing the cash flows for each period. The various characteristics of the cash flows in each time period are displayed under each period tab (e.g., **Three Months** tab, **Six Months** tab, etc) with the **All** tab displaying all cash flows. Note that the tabs will only be displayed if there are flows for the period.

The following table explains the information displayed in each column of the tabs:

Column name	Description
Portfolio	Portfolio name.

Column name	Description
Account	Account name on which cash flow is linked.
Value Date	Cash Flow value date.
Operation Type	Cash Flow operation type.
Instrument	Cash Flow instrument.
Quantity	Position quantity of the instrument.
Price	Cash Flow price.
Amount	Cash Flow amount.

17.6 Portfolio section

The **Portfolio** section displays general information about the portfolio that has been selected in the analysis scope.

18 Compliance Checking

This chapter explains how to use the Compliance Checking function:

- [Overview](#)
- [Accessing the Compliance Checking function](#)
- [Using the Context section](#)
- [Compliance Checking results](#)

18.1 Overview

The Compliance Checking function displays a summary and details of the positions' compliance in one or more portfolios at a given date, according to their associated investment policies (objectives) and constraints. For detailed information about the Compliance Checking function, refer to the *Triple'A Plus Core Orders and Productivity Guide*.

18.2 Accessing the Compliance Checking function

To access the Compliance Checking function:

1. Select the **Portfolio Analysis** tab.
2. From the menu bar, go to **Analysis > Compliance Checking**.

18.3 Using the Context section

To specify the nature of the compliance checking to be performed, use the **Context** section of the Compliance Checking work area. The **Context** section consists of the following tabs:

- [Basic tab](#)
- [Advanced tab](#)

18.3.1 Basic tab

1. Complete the fields in the **Basic** tab as follows:

Item	Selection	Description
Analysis Scope	All Portfolio Client Manager Advisor Portfolio List Query	Determines the portfolio or set of portfolios to be included in the compliance checking. The default value is Portfolio.
Instrument Set	All Instrument Instrument List	You can use these options to restrict the compliance checking to an instrument or a set of instruments. The default value is All.

Item	Selection	Description
Load Hierarchy	No From Parent Full	If the From Parent option is selected, the child portfolios' positions will be included in the compliance checking. If the Full option is selected the child portfolios' positions will be included too, but the head portfolios of each portfolio hierarchy are used for position's aggregation and compliance checking. The default value is From Parent.

2. Do one of the following:

- Click the **Advanced** tab to further define the context for your analysis (see section [Advanced tab](#))
- Click **Execute** to perform the compliance checking execution.

18.3.2 Advanced tab

Complete the fields in the **Advanced** tab as follows:

Item	Selection	Description
Min Status Max Status	<all statuses from Cancelled through to Post Accounted>	Select the minimum and maximum statuses of the retrieved positions. The default value for both is Accounted.
Merge Status	Keep Status Merge Status	Merge Status merges positions with different statuses according to the MERGE_STATUS_RULE parameter. Keep Status keeps positions with different statuses separate. The default value is Keep Status.
Logical Fusion Rule	<Default> Basic PosCurr Deposit PosCurr/Deposit	Indicates which criteria are used to identify a position. The default value is Basic. <Default> uses the POS_LOGICAL_ID_RULE system parameter setting. Basic uses Portfolio and Instrument. PosCurr uses position currency. Deposit uses the custodian. PosCurr/Deposit uses both position currency and custodian.
Position Netting	Keep Positions Close Positions	Close Positions merges negative and positive positions. The default value is Close Positions.
Derivation	No Online	Compliance Checking can be executed with derived objectives, which are strategies' objectives modified to include the constraints (see <i>Triple'A Plus Core Orders and Productivity Guide</i> for more details about the derivation process). The default value is Online.

18.4 Compliance Checking results

This section explains the information displayed in the compliance checking result views and general business rules, and contains the following subsections:

- [General business rules](#)
- [Summary screen](#)
- [Detailed screen](#)

18.4.1 General business rules

This section explains general business rules and concepts to help you understand the behaviour of the Compliance Checking function. For further explanations, see *Triple'A Plus Core Orders and Productivity Guide*.

In the **Context** section, it is impossible to force the usage of any strategies that are not directly or indirectly (through a list of portfolios) linked to the portfolios. For this reason, the compliance checking on a portfolio, without any linked strategies, only displays information related to its constraints' compliance and its positions' valuation.

If a link (direct or indirect) between a strategy and a portfolio has the nature "Strategy (Check Only)", then all related strategies' objectives are filtered from the results. It means that information related to such links is simply not displayed in the results.

18.4.2 Summary screen

If you set the **Analysis Scope** option in the **Context** section to All (portfolios), Manager, Advisor, Portfolio List, or Query, when you execute your compliance checking, the results are displayed using a summary screen.

The top of the summary screen contains the same **Context** section that was described in section [Using the Context section](#). The options in this section are still editable.

The **Compliance Summary per Portfolio** section presents a summary of the main values of the compliance checking, according to how you defined the analysis context.

The following table explains what information is displayed in each column:

Column name	Default display	Description
Portfolio / Strategy	Displayed and locked	This column displays a tree view, starting with the portfolio's name and followed by the head strategy's label included or not in the composition of investment profiles directly linked or indirectly linked (through portfolio list) to the portfolio. The first head strategy to be displayed is the strategy used for rebalancing, then the other head strategies follow. If there are no strategies linked to the portfolio, two rows are displayed: a row with the portfolio's name and a second, empty, row. The display of the head strategy's label is based on the following rules: 1. If the head strategy's translated denomination exists, then this value is used. 2. Else if the head strategy's denomination exists, then this value is used. 3. At least, the head strategy's name is used. If the Context section is based on Portfolio List, Advisor, Manager or Query, then the portfolio's name is an hyperlink to focus on the compliance details of the corresponding portfolio (see section Detailed screen).
Portfolio Link Nature	Hidden	This column indicates the link between the portfolio and its associated Client defined in the Context section. If the Context section is not based on a Client, the value is empty. Otherwise, the 2 following values are allowed: • Direct • Indirect The portfolio link nature is displayed at portfolio level only.
Strategy Nature	Hidden	This column indicates the nature of the head strategy (Asset Allocation, Model Portfolio, etc.). The strategy nature is displayed at head strategy level only.

Column name	Default display	Description
Investment Profile	Hidden	This column displays the label of the Investment Profile related to the head strategy. The display of the investment profile's label is based on the following rules: 1. If the Investment Profile's translated denomination exists, then this value is used 2. Else if the Investment Profile's denomination exists, then this value is used. 3. At least, the Investment Profile's name is used. The Investment Profile is displayed at head strategy level only.
Strategy Usage	Hidden	This column displays the usage of the head strategy. The following values are allowed: • (blank = empty), if no specific usage. • Rebalancing strategy, if it is used for a rebalancing process. • Exposure strategy, if its attribute "Risk View" is tagged. • Rebalancing strategy & Exposure strategy, if both previous conditions are reached. The strategy usage is displayed at head strategy level only.

Column name	Default display	Description
Objectives Compliance	Displayed	This column indicates, for each head strategy, whether all actual weights are in the set bounded by the corresponding objectives with margins (the set is [objective - margin; objective + margin]). The indicators that are used depend on whether the Case Management function is activated. If Case Management is inactive (system parameter CASE_ACTIVATION_FLAG equals 0), the following icons are available. (For information about icon images, see section Icons, fields, and links.) • Light Bulb icon: If no objectives were defined for all corresponding portfolio's positions. • Checkmark icon: If no strategies are linked to the portfolio. • Checkmark icon: If all actual weights are in the set [objective - margin; objective + margin]. • Cross icon: If some actual weight are not in the set [objective - margin; objective + margin]. • Light Bulb icon: If objectives are not evaluated. If Case Management is active (system parameter CASE_ACTIVATION_FLAG equals 1), the following icons are available: • Light Bulb icon: If no objectives were defined for all corresponding portfolios' positions. • Checkmark icon: If no strategies are linked to the portfolio. • Checkmark icon: If all actual weight are in the set [objective - margin; objective + margin]. • Yellow Warning icon: If some actual weights are not in the set [objective - margin; objective + margin], but their associated severities are defined as low (associated severities < system parameter STRAT_BLOCKCONSTR_CRITICALNESS). • Red Warning icon: If some actual weights are not in the set [objective - margin; objective + margin] and one or more of their associated severities are defined as medium (system parameter STRAT_BLOCKCONSTR_CRITICALNESS <= associated severities < system parameter SESSION_BLOCK_CRITICALNESS). • Cross icon: If some actual weight are not in the set [objective - margin; objective + margin] and one or more of their associated severities are defined as high (associated severities >= system parameter SESSION_BLOCK_CRITICALNESS). • Light Bulb icon: If objectives are not evaluated. For more information about the Case Management function and associated system parameters, see <i>Triple'A Plus Core Orders and Productivity Guide</i>.

Column name	Default display	Description
Constraints Compliance	Displayed	This column indicates, for each portfolio, whether their constraints are breached. The indicators that are used depend on whether the Case Management function is activated. If Case Management is inactive (system parameter CASE_ACTIVATION_FLAG equals 0), the following values are available. (For information about icon images, see section Icons, fields, and links.) • Checkmark icon: If no constraints were defined for the corresponding portfolio. • Checkmark icon: If all constraints are not breached. • Cross icon: If some constraints are breached. • Light Bulb icon: If constraints are not evaluated. If the Case Management is active (system parameter CASE_ACTIVATION_FLAG equals 1), the following values are available: • Checkmark icon: If no constraints were defined for the corresponding portfolio. • Checkmark icon: If all constraints are not breached. • Yellow Warning icon: If some constraints are breached, but their associated severities are defined as low (associated severities < system parameter STRAT_BLOCKCONSTR_CRITICALNESS). • Red Warning icon: If some constraints are breached and one or more of their associated severities are defined as medium (system parameter STRAT_BLOCKCONSTR_CRITICALNESS <= associated severities < system parameter SESSION_BLOCK_CRITICALNESS). • Cross icon: If the constraints are breached and one or more of their associated severities are defined as high (associated severities >= system parameter SESSION_BLOCK_CRITICALNESS). • Light Bulb icon: If constraints are not evaluated. For more information about the Case Management function and associated system parameters, see <i>Triple'A Plus Core Orders and Productivity Guide</i>.
Market Value	Displayed	This column displays the portfolio market value in the reference currency. The portfolio market value is displayed at portfolio level only.
Ownership Rule	Hidden	This column indicates the ownership the Client defined in the Analysis Scope of the Context section has on the portfolio. If the Context section is not based on a Client, the value is empty. Otherwise, the following values are allowed: • Empty (blank), if link between the client and the portfolio is direct. • Full Ownership. • Bare Ownership. • Usufruct. The ownership rule is displayed at portfolio level only.
Percentage of Ownership	Hidden	This column indicates the percentage of ownership the Client defined in the Analysis Scope of the Context section has on the portfolio. If the Context section is not based on a Client, the value is empty. The ownership rule is displayed at portfolio level only.

The following image shows an example:

Compliance Summary per Portfolio

Portfolio / Strategy	Objectives Compliance	Constraints Compliance	Market Value

Compliance Summary per Portfolio section for an Analysis Scope based on an advisor

18.4.3 Detailed screen

The detailed result screen is displayed in the following cases:

- If you select a portfolio from the summary screen (as described in section [General business rules](#)).
- If before executing the compliance checking, you set the **Analysis Scope** option in the **Context** section to Portfolio or Client.

The detailed screen contains several sections, described below.

18.4.3.1 Context

The **Context** section is the same section that was described in section [Using the Context section](#).

If you arrived at the detailed screen by selecting a portfolio from the summary screen, the **Context** section is not editable, and you can use the **Back to Summary** button to return to the summary screen.

If you arrived at the detailed screen directly as a result of executing a valuation on a Portfolio or Client, the **Context** section is editable.

18.4.3.2 Portfolio or Client

If you arrived at the detailed screen directly as a result of executing a compliance checking on a Portfolio or Client, a **Portfolio** or a **Client** section is included, and displays basic portfolio or client information.

If you arrived at the detailed screen by selecting a portfolio from the summary screen, the **Portfolio** section is included, and displays basic portfolio information.

18.4.3.3 Compliance Summary per Portfolio

The **Compliance Summary per Portfolio** section is the same section that was described in the section [General business rules](#).

The following image shows an example:

Compliance Summary per Portfolio

Portfolio / Strategy	Objectives Compliance	Constraints Compliance	Market Value
N_AI_PTF10		✓	73,240.73 GBP
N_AI_PTF9	✓	✓	655,590.74 GBP
N_AI_Asset2_Neutral	⚠		
N_AI_Asset1_Neutral	⚠		

Results 1 to 2 of 2

Compliance Summary per Portfolio section for an Analysis Scope based on a client

18.4.3.4 Compliance Details per Portfolio

The **Compliance Details per Portfolio** section contains two tabs, detailing the positions' compliance regarding the investment policies (strategies' objectives) and investment constraints (only structured constraints which can be used in the objectives' derivation process, explained in the *Triple'A Plus Core Orders and Productivity Guide*).

The tabs are not dynamic, which means that they are always displayed even if no strategies and/or constraints are related to the portfolios.

The following table explains what information is displayed in each column of the **Objectives Compliance** tab (positions' compliance regarding the investment policies):

Column name	Default display	Description
Buy	Displayed	This column is not available if the Compliance Checking function has been used to simulate a situation from the Proposal Generator (see section Proposal Generator). Otherwise, it displays a checkbox on every row - instrument's level and market structure's level. By selecting a checkbox at a hierarchy level, every hierarchy level and instrument under it are automatically selected. If, however, you select at the main instrument's level, only one instrument is selected. You can use the checkbox to select the corresponding instrument for a buy order in the Initiate Order process, after which you click the Initiate Order button. The checkbox is selectable only if the following conditions are reached: - The user has the rights to initiate a buy order. - The actual weight of the position is not compliant with its objective with margins. - A buy operation should be executed to get the actual weight compliant with its objective with margins. It means that actual weight is smaller than objective minus margin.

Column name	Default display	Description
Sell	Displayed	This column is not available if the Compliance Checking function has been used to simulate a situation from the Proposal (see section Proposal Generator). Otherwise, it displays a checkbox on every row - instrument's level and market structure's level. By selecting a checkbox at a hierarchy level, every hierarchy level and instrument under it are automatically selected. If, however, you select at the main instrument's level, only one instrument is selected. You can use the checkbox to select the corresponding instrument for a buy order in the Initiate Order process, after which you click the Initiate Order button. The checkbox is selectable only if the following conditions are reached: • The user has the rights to initiate a sell order. • The actual weight of the position is not compliant with its objective with margins. • A sell operation should be executed to get the actual weight compliant with its objective with margins. It means that actual weight is greater than objective plus margin.
Investment Structure	Displayed and locked	This column shows the investment structure corresponding to the head strategies, with its sub-strategies displayed in a tree view. The different levels are: • Level 1: portfolio's name. • Level 2: investment profile's label, or empty if no investment profiles. • Level 3: head strategy's label. • Level 4: market segments' label. • Levels 5 to n: sub market segments' label. • Level n+1: main instruments' label. • Level n+2: instruments' label. The display of the labels is based on the following rules: 1. If the translated denomination exists, then this value is used. 2. Else if the default denomination exists, then this value is used. 3. At least, the name is used. The levels 1, 2, and 3 are always available, but the display of the other levels depends on the strategies implementation in the Triple'A Plus Core system. The level n+2 is only displayed if there are several positions sharing the same instrument but not the same currency or /and deposit and if the Context section is set to display such positions. Levels 4, 5 until n are sorted in ascending order, based on the classifications' ranks behind the market structure (as in the GUI). The levels n+1 and n+2 are sorted in descending order based on their position's market value. If no strategies are linked to the portfolios, then levels 2 and 3 are empty and levels 5 to n are not available
Instr. Details	Displayed and locked	This column contains the Details icon (for information about icon images, see section Icons, fields, and links) when there is an instrument for the level (n+1 and n+2). Otherwise, nothing is displayed. Click the icon to see the corresponding instrument details in a separate window.
Deposit	Hidden	This column displays the deposit of the position. It is only available from main instrument level to instrument's level (n+1 and n+2).

Column name	Default display	Description
Quantity	Displayed	This column displays the quantity of the positions. For instruments with a face value, the quantity is shown as an amount expressed in the instrument currency. Otherwise, the quantity it is show as units. It is followed by the Details icon (for information about icon images, see section Icons, fields, and links), which you can click to see the position details in a separate window. It is only available from main instrument's level to instrument's level (n+1 and n+2).
Market Price	Hidden	This column displays the current quotation of the positions' instruments. For instruments with a face value, the quotation is shown as a percentage. Otherwise, it is shown as an amount expressed in the instrument currency. It is only available from main instrument's level to instrument's level (n+1 and n+2).
Market Value	Displayed	This column shows the market value in the reference currency, from head strategy's level to instrument's level. At head strategy's level, it is equivalent to the portfolio market value.

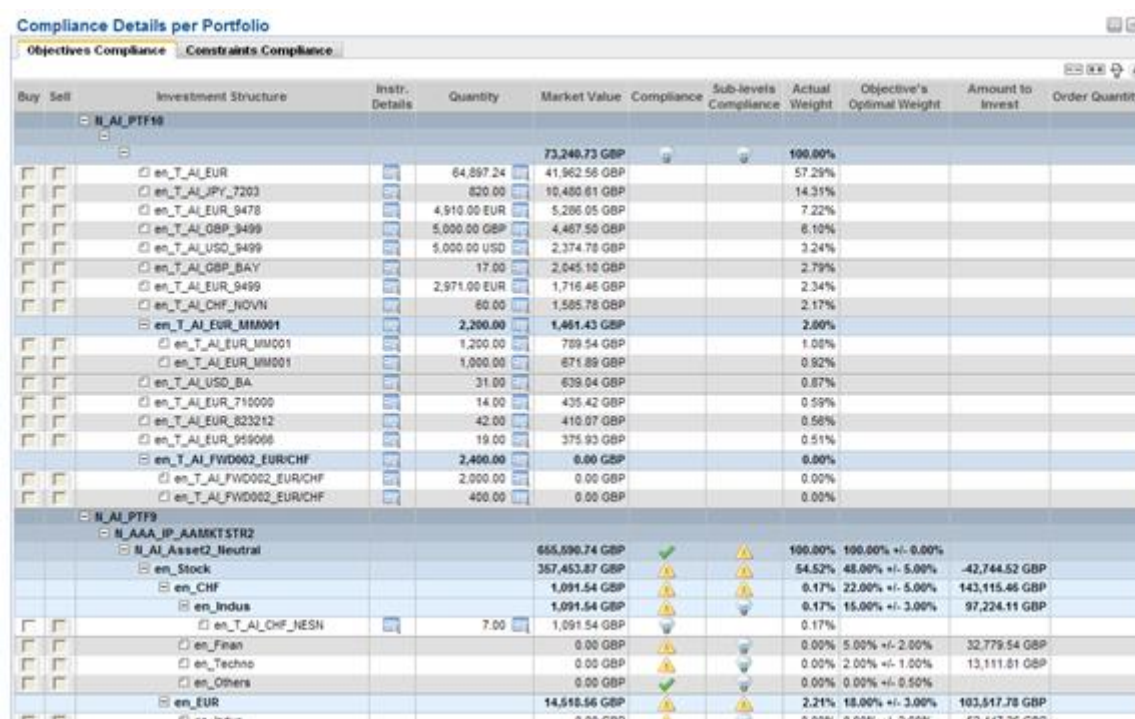

Column name	Default display	Description
Compliance	Displayed	This column indicates, for each level, whether the actual weight is in the set bounded by the corresponding objective with margins (the set is [objective - margin; objective + margin]. The indicators that are used depend on whether the Case Management function is activated. If Case Management is inactive (system parameter CASE_ACTIVATION_FLAG equals 0), the following values are available. (For information about icon images, see section Icons, fields, and links.) • No icons: If no strategies are linked to the portfolio. • Light Bulb icon: If no objectives were defined or not evaluated for the corresponding portfolio position. • Checkmark icon: If the actual weight is in the set [objective - margin; objective + margin]. • Cross icon: If the actual weight is not in the set [objective - margin; objective + margin]. If Case Management is active (system parameter CASE_ACTIVATION_FLAG equals 0), the following values are available: • No icons: If no strategies are linked to the portfolio. • Light Bulb icon: If no objectives were defined or evaluated for the corresponding portfolio position. • Checkmark icon: If the actual weight is in the set [objective - margin; objective + margin]. • Yellow Warning icon: If the actual weight is not in the set [objective - margin; objective + margin], but its severity is defined as low (severity < system parameter STRAT_BLOCKCONSTR_CRITICALNESS). • Red Warning icon: If the actual weight is not in the set [objective - margin; objective + margin] and its severity is defined as medium (system parameter STRAT_BLOCKCONSTR_CRITICALNESS <= severity < system parameter SESSION_BLOCK_CRITICALNESS). • Cross icon: If the actual weight is not in the set [objective - margin; objective + margin] and its severity is defined as high (severity >= system parameter SESSION_BLOCK_CRITICALNESS). For more information about the Case Management function and associated system parameters, see <i>Triple'A Plus Core Orders and Productivity Guide</i>.

Column name	Default display	Description
Sub-levels Compliance	Displayed	This column indicates, for each market segment (level n) only, whether their direct sub-levels (level n+1) have their actual weights in the set bounded by the corresponding objective with margins If the Case Management is inactive (system parameter CASE_ACTIVATION_FLAG equals 0), the following values are available. (For information about icon images, see section Icons, fields, and links.) - No icons: If no strategies are linked to the portfolio. Light Bulb icon: If no objectives were defined or evaluated for the corresponding portfolio's positions as direct sub-levels. Checkmark icon: If the actual weights of all direct sub-levels are in their corresponding set [objective - margin; objective + margin]. Cross icon: If one or more actual weights of direct sub-levels are not in their corresponding set [objective - margin; objective + margin]. If the Case Management is active (system parameter CASE_ACTIVATION_FLAG equals 1), the following values are available: - No icons: If no strategies are linked to the portfolio. Light Bulb icon: If no objectives were defined or evaluated for the corresponding portfolio's positions as direct sub-levels. Checkmark icon: If the actual weights of all direct sub-levels are in the set [objective - margin; objective + margin]. Yellow Warning icon: If one or more actual weights of direct sub-levels are not in the set [objective - margin; objective + margin], but their associated severities are defined as low (associated severities < system parameter STRAT_BLOCKCONSTR_CRITICALNESS). Red Warning icon: If one or more actual weights of direct sub-levels are not in the set [objective - margin; objective + margin] and one or more of their associated severities are defined as medium (system parameter STRAT_BLOCKCONSTR_CRITICALNESS <= associated severities < system parameter SESSION_BLOCK_CRITICALNESS). Cross icon: If one or more actual weights of direct sub-levels are not in the set [objective - margin; objective + margin] and one or more of their associated severities are defined as high (associated severities >= system parameter SESSION_BLOCK_CRITICALNESS). For more information about the Case Management function and associated system parameters, see <i>Triple'A Plus Core Orders and Productivity Guide</i>.
Actual Weight	Displayed	This column indicates the ratio, in percent, between the market value of investment structure's element and the portfolio's market value. At head strategy's level, this ratio is always 100.00% This information is only displayed from head strategy's level to instrument's level for an Instrument Set in the Context section based on All (instruments); otherwise it is only displayed from main instrument's level to instrument's level.

Column name	Default display	Description
Objective's Optimal Weight	Displayed	This column displays the objective of the investment structure's element with margins. If no strategies are linked to the portfolio, this column is empty. The column shows the objectives with derivation if such computation was defined in the Context section (see <i>Triple'A Plus Core Orders and Productivity Guide</i> for details about derivation). In any case, at head strategy's level, the objective with margins is always 100.00% +/- 0.00%. A null value for objective or/and margin is replaced with the value 0.00%. This information is only displayed from the head strategy's level to the instrument's level for an Instrument Set in the Context section based on All (instruments); otherwise it is only displayed from main the instrument's level to the instrument's level.
Objective's Original Weight	Hidden	This column displays the original objective of the investment structure's element with margins. If no strategies are linked to the portfolio, this column is empty. The column shows the objectives before derivation as defined originally by the strategy. In any case, at the head strategy's level, the objective with margins is always 100.00% +/- 0.00%. A null value for objective or/and margin is replaced with the value 0.00%. This information is only displayed from the head strategy's level to the instrument's level for an Instrument Set in the Context section based on All (instruments); otherwise it is only displayed from the main instrument's level to the instrument's level.
Severity	Hidden	This column indicates the objective's severity. If no strategies are linked to the portfolio, this column is empty. The following values are allowed: • Empty (blank), if value <None>. • Not Critical. • Low. • Medium. • High.
Objective Gap	Hidden	This column displays the difference, in absolute value, between the actual weight and the objective of the investment structure's element. If no strategies are linked to the portfolio, this column is empty. The computation occurs only if the actual weight is not included in the set [objective - margin; objective + margin]. The column shows the objectives with derivation if such computation was defined in the Context section (see <i>Triple'A Plus Core Orders and Productivity Guide</i> for details about derivation). In any case, at head strategy's level, the objective gap is always a null value. This information is only displayed from head strategy's level to instrument's level for an Instrument Set in the Context section based on All (instruments); otherwise it is only displayed from main instrument's level to instrument's level.
Amount to Invest	Displayed	This column indicates the minimum amount to invest/disinvest, in the reference currency, to get the actual weight of corresponding level compliant with its objective and margins. If no strategies are linked to the portfolio, this column is empty. The computation is based on the objective and the actual weight, without taking the objective's margins into account. This value is signed: a minus sign stands for a disinvestment (sell) and a plus sign stands for an investment (buy).

Column name	Default display	Description
Order Quantity	Displayed	If the investment structure to which the main instrument's level belongs is used for rebalancing, then this column indicates the order quantity (in absolute value), to get the main instrument's actual weight compliant with its objective with margins. If no strategies are linked to the portfolio, this column is empty. For instruments with a face value, the order quantity is shown as an amount expressed in the instrument currency. Otherwise, it is shown as units. In any other cases, no values are displayed.

The following image shows an example of objectives compliance information:

Buy	Sell	Investment Structure	Instr. Details	Quantity	Market Value	Compliance	Sub-levels Compliance	Actual Weight	Objective's Optimal Weight	Amount to Invest	Order Quantity
		N_AI_PTF19			73,240.73 GBP			100.00%

Objectives Compliance tab for an Analysis Scope based on a client

In the **Constraints Compliance** tab (positions' compliance regarding the investment constraints), two tables are displayed. The first table (at the top) contains a list of available allocation constraints (constraints with allocation nature allocation), constraints on instruments (constraints with security in nature), constraints on list of instruments (constraints with security in nature) and holding constraints (strategies with constraint set nature) related to the portfolios.

The second table contains a list of positions which do not have to be taken into account for the evaluation of the compliance checking (constraints with security out nature); they are called exclusion constraints. The *Triple'A Plus Core Orders and Productivity Guide* and *Triple'A Plus Core Advanced Constraints Management Guide* provide more information about constraints.

The following table explains what information is displayed in each column of the first table in the **Constraints Compliance** tab:

Column name	Default display	Description
Portfolio	Displayed and locked	This column shows the portfolio's name.
Constraint Description	Displayed and locked	This column displays the constraint description, using the following format: - For a holding constraint (Constraint Set strategy): constraint set element's denomination. - For an allocation constraint: On market segment [MARKET SEGMENT LEVEL 1 -> MARKET SEGMENT LEVEL 2 -> ... -> MARKET SEGMENT LEVEL n], where MARKET SEGMENT LEVEL x stands for the denomination (or name if denomination is not available) of market segment level x. - For a constraint on instrument (Security In constraint on instrument): On instrument [INSTRUMENT], where INSTRUMENT stands for the denomination (or name if denomination is not available) of instrument. For such a constraint, INSTRUMENT is followed by the Details icon; click the icon to see the details of the corresponding instrument in a separate window. (For information about icon images, see section Icons, fields, and links.) - For a constraint on list of instruments (Security In constraint on instrument list): On instrument list [INSTRUMENT LIST], where INSTRUMENT LIST stands for the denomination (or name if denomination is not available) of the list of instruments.
Constraint Compliance	Displayed	This column indicates, for each constraint, whether it is breached or not. The indicator that is used depends on whether the Case Management function is activated. If Case Management is inactive (system parameter CASE_ACTIVATION_FLAG equals 0), the following values are available. (For information about icon images, see section Icons, fields, and links.) Light Bulb icon: If the constraint is not defined or evaluated. Checkmark icon: If the constraint is not breached. Cross icon: If the constraint is breached. If Case Management is active (system parameter CASE_ACTIVATION_FLAG equals 1), the following values are available: Light Bulb icon: If the constraint is not defined or evaluated. Checkmark icon: If the constraint is not breached. Yellow Warning icon: If the constraint is breached, but its severity is defined as low (severity < system parameter STRAT_BLOCKCONSTR_CRITICALNESS). Red Warning icon: If the constraint is breached and its severity is defined as medium (system parameter STRAT_BLOCKCONSTR_CRITICALNESS <= severity < system parameter SESSION_BLOCK_CRITICALNESS). Cross icon: If the constraint is breached and its severity is defined as high (severity >= system parameter SESSION_BLOCK_CRITICALNESS). For more information about the Case Management function and associated system parameters, see <i>Triple'A Plus Core Orders and Productivity Guide</i>.
Actual Position	Displayed	For an allocation constraint, a constraint on instrument (Security In constraint on instrument), or a constraint on list of instruments (Security In constraint on instrument list), this column indicates the actual position that the portfolio currently holds. It is expressed as a percentage (% symbol), but for instrument constraints it can also be expressed as a quantity (Qty symbol) or an amount in reference currency (currency symbol). In all other cases, no values are displayed.

Column name	Default display	Description
Fixed Objective	Displayed	For an allocation constraint, this column indicates whether the constraint used fixed objectives. The following values are allowed: - Empty (blank): no usage of fixed objectives. - Yes: usage of fixed objectives. In all other cases, no values are displayed.
Minimum Objective	Displayed	For an allocation constraint, a constraint on an instrument (Security In constraint on instrument), or a constraint on a list of instruments (Security In constraint on instrument list), this column indicates the minimum objective that the portfolio must hold. It is expressed as a percentage (% symbol), but for an instrument constraint it can also be expressed as a quantity (Qty symbol) or an amount in constraint currency (currency symbol). In all other cases, no values are displayed.
Maximum Objective	Displayed	For an allocation constraint, a constraint on an instrument (Security In constraint on instrument), or a constraint on a list of instruments (Security In constraint on instrument list), this column indicates the maximum objective that the portfolio can hold. It is expressed as a percentage (% symbol), but for an instrument constraint it can also be expressed as a quantity (Qty symbol) or an amount in constraint currency (currency symbol). In all other cases, no values are displayed.
Severity	Hidden	This column indicates the constraint's severity. The following values are allowed: - Empty (blank), if value <None> - Not Critical - Low - Medium - High

The following image shows an example of constraints:

Constraints

Portfolio	Constraint Description	Constraint Compliance	Actual Position	Fixed Objective	Minimum Objective	Maximum Objective
N_AI_MC_1.....end	On instrument [en_T_AI_CHF_57043]	✓	50,000.00 Qty		31,500.00 Qty	
N_AI_MC_1.....end	On instrument [en_T_AI_CHF_9478]	⚠	5.34%		2.00%	3.00%
N_AI_MC_1.....end	On instrument [en_T_AI_CHF_BC]	⚠	0.00%		5.00%	5.00%
N_AI_MC_1.....end	On instrument [en_T_AI_CHF_NESN]	⚠	22.72%		3.00%	3.00%
N_AI_MC_1.....end	On instrument [en_T_AI_CHF_NOVN]	✓	0.00 EUR			35,000.00 EUR
N_AI_MC_1.....end	On instrument [en_T_AI_CHF_ROG]	✓	11.41%		7.00%	
N_AI_MC_1.....end	On market segment [en_Bond -> en_Bond/CHF]	⚠	21.28%		8.00%	9.00%
N_AI_MC_1.....end	On market segment [en_Stock -> en_Stock/CHF -> en_Chemicals -> en_CHIM1]	⚠	1.75%		12.00%	
N_AI_MC_1.....end	On market segment [en_Stock -> en_Stock/CHF -> en_Chemicals -> en_CHIM2]	⚠	11.41%			8.00%
N_AI_MC_1.....end	On market segment [en_Stock -> en_Stock/CHF -> en_Food]	⚠	22.72%		13.00%	13.00%

Results 1 to 10 of 10

Constraints Compliance tab with constraints

The following table explains what information is displayed in each column for the second table in the **Constraints Compliance** tab:

Column name	Default display	Description
Portfolio	Displayed and locked	This column shows the portfolio's name.

Column name	Default display	Description
Constraint Description	Displayed and locked	This column displays the exclusion constraint description using the following format: Exclude QUANTITY [INSTRUMENT] from mandate , where QUANTITY stands for the quantity to exclude and INSTRUMENT stands for the denomination (or name if denomination is not available) of instrument to exclude. For such a constraint, INSTRUMENT is followed by the Details icon; click the icon to see the details of the corresponding instrument in a separate window. (For information about icon images, see section Icons, fields, and links .)
Remaining in Management Mandate	Displayed	This column indicates the remaining quantity of instrument hold in the portfolio after application of the exclusion constraint. If the exclusion constraint was defined as a percentage, the remaining quantity is expressed as a percentage (% symbol). If it is defined as a quantity, the remaining quantity is expressed as a quantity (Qty symbol).
Constraint Treatment	Displayed	This column displays the constraint's treatment. The following values are allowed: - Empty (blank) if constraint treatment is not defined or equals to <None>. - Mandatory. - Optional. - Check Only.
Severity	Hidden	This column indicates the constraint's severity. The 5 following values are allowed: - Empty (blank), if value <None>. - Not Critical. - Low. - Medium. - High.

The following image shows an example of excluded positions:

Positions Excluded from Management Mandate

Portfolio	Constraint Description	Constraint Compliance	Remaining in Management Mandate	Constraint Treatment
N_AI_SO_PTF2.....end	Exclude 10.00 [en_T_AI_GBP_BARC] from mandate		5.0000 Qty	Optional
N_AI_SO_PTF2.....end	Exclude 1500.00 [en_T_AI_CHF_NESN] from mandate		1,000.0000 Qty	Only Check
N_AI_SO_PTF2.....end	Exclude 1500.00 [en_T_AI_CHF_ROG] from mandate		1,500.0000 Qty	Mandatory
N_AI_SO_PTF2.....end	Exclude 300.00 [en_T_AI_USD_MSFT] from mandate		1,000.0000 Qty	Mandatory
N_AI_SO_PTF2.....end	Exclude 30000.00 [en_T_AI_CHF_9499] from mandate		85,000.0000 Qty	Optional
N_AI_SO_PTF2.....end	Exclude 5000.00 [en_T_AI_EUR_57059] from mandate		10,000.0000 Qty	Only Check

Results 1 to 6 of 6

Constraints Compliance tab with positions excluded from management mandate

19 Position Details

This chapter explains how to use the Position Details function:

- [Overview](#)
- [Accessing the Position Details function](#)
- [Position Details context](#)
- [Position Details results](#)

19.1 Overview

The Position Details function provides the ability to view the details of a position displayed in valuation or compliance checking results. That is, it is a sub-dependant function that can be executed via the results provided by the Valuation of Compliance Checking functions; see sections [Valuation](#) and [Compliance Checking](#).

The **Position Details** screen is subdivided into the following sections:

- **Position Details** section: Contains the details of the position.
- **Operations** section: Contains all the operations related to the position for a period from the date defined in the **Context** section of Valuation or Compliance Checking to 18 months ago. The number of 18 months is hardcoded in the pageflow of the Positions Details function and can only be modified through a customisation using Design Studio (see *Triple'A Plus Design Studio User Guide*).

19.2 Accessing the Position Details function

To display the details of a position:

1. Execute a Valuation or a Compliance Checking (see sections [Valuation](#) and [Compliance Checking](#)).
2. If not already displayed, display the detailed screen of the executed function to show all positions.
3. In the **Quantity** column, click the **Details** icon of the position whose details must be shown. (For information about icon images, see section [Icons, fields, and links](#).)

A **Position Details** window opens, containing two sections: **Position Details** and **Operations**. The **Operations** section shows information about related operations of the selected position; note that the filtering option is only available in the **Operations** section.

19.3 Position Details context

The Position Details function does not have a **Context** section editable by the user as in other functions. Its context is automatically defined by the system. Each section of the **Position Details** window has its own context, as explained below:

- [Position Details section](#)
- [Operations section](#)

19.3.1 Position Details section

The **Position Details** section does not require the execution of a specific function. It uses directly the data provided by the position in the Valuation or Compliance Checking function. Therefore, no context is required.

19.3.2 Operations section

The **Operations** section has its own context, whose parameters are inherited from the **Context** section of the Valuation or Compliance Checking function. However, some parameters are overwritten. The following table describes the overwritten parameters:

Item	Selection	Description
Analysis Scope	Portfolio	This is the portfolio related to the selected position.
Instrument Set	Instrument	This is the instrument related to the selected position.
From	<same value as Date of Valuation or Compliance Checking function less 18 months>	Date defining the beginning of the period of the operation history. This is the same value as the Date defined in the Context section of the Valuation or Compliance Checking function less 18 months (hardcoded value in the pageflow of Position Details function).
Till	<same value as Date of Valuation or Compliance Checking function>	Date defining the end of the period of the operation history. This is the same value as the Date defined in the Context section of the Valuation or Compliance Checking function.
Min Status	<lowest value between all available values for status>	The minimum status of the operations to be retrieved by the operation history. It takes the lowest value of all available statuses (see <i>Triple'A Plus Web Packaging Reference Guide</i> for a list of possible values).
Max Status	<highest value between all available values for status>	The maximum status of the operations to be retrieved by the operation history. It takes the highest value of all available statuses (see <i>Triple'A Plus Web Packaging Reference Guide</i> for a list of possible values).

19.4 Position Details results

This section explains the information displayed in the position details view and general business rules, and contains the following subsections:

- [General business rules](#)
- [Position Details section](#)
- [Operations section](#)

19.4.1 General business rules

This section explains general business rules and concepts, to help you understand the behaviour of the position details.

The operations related to a position depend of the nature of the instrument related to the position. Positions may be split into two categories: those related to a cash account, called cash positions, and those related to other instruments, called non-cash positions:

- For cash positions, only operations increasing or decreasing the position's quantity are displayed. For example, a buy of a security, an income (such as dividends), or a Forex operation.
- For non-cash positions, all operations related to the instrument related to the position are displayed. For example a sell of a security, an income (such as dividends), or a corporate action, even if they do not increase or decrease the position's quantity.

An income operation in cash is displayed under the corresponding cash position which received the income and the non-cash position related to the instrument generating the income.

19.4.2 Position Details section

The **Position Details** section presents the details of the selected position. It shows a table with always only one result.

The following table explains what information is displayed in each column:

Column name	Default display	Description
Portfolio	Displayed and locked	Shows the portfolio's name.
Instrument	Displayed and locked	Shows the label of the instrument related to the position. On the left, you can click the Details icon to see the corresponding instrument details in an additional window (for further information about icon images, see section Icons, fields, and links). The display of the labels is based on the following rules: 1. If the translated denomination exists, then this value is used. 2. Else if the default denomination exists, then this value is used. 3. At least, the name is used.
Instrument Code	Hidden	The code of the instrument related to the position.
Instr. Ccy	Displayed	Displays the currency code of the instrument related to the position.
Quantity	Displayed	Displays the quantity of the positions. For a position whose instrument has a face value, the quantity is shown as an amount and expressed in the instrument currency. Otherwise, the quantity is shown as units.
Market Price	Displayed	Indicates the quotation of the instrument related to the position. For instruments quoted in percentage, the market price is shown as a percentage. Otherwise, it is shown in the instrument's currency.
Exchange Rate	Displayed	Indicates the exchange rate between the position's currency and the reference currency. The reference currency is the same as the currency already used for the execution of the Valuation or Compliance Checking function.
Market Value	Displayed	Indicates the market value of the position. It is computed in the reference currency, which is the same as the currency already used for execution of the Valuation or Compliance Checking function.
Unit Cost	Displayed	Indicates the average cost per instrument's unit spent to create the position. For instruments quoted in percentage, the cost unit is shown in percentage. Otherwise, it is shown in the position's currency.
Cost Exchange Rate	Displayed	Indicates the exchange rate between the position's currency and the reference currency. The reference currency is the same as the currency already used for the execution of the Valuation or Compliance Checking function.

Column name	Default display	Description
Net Cost Price	Displayed	Indicates the total cost price spent to create the position. The total cost price is in the reference currency, which is the same as the currency already used for execution of the Valuation or Compliance Checking function.
P&L	Displayed	The total profit and loss of the position, shown as an amount in the reference currency. The reference currency is the same as the currency already used for the execution of the Valuation or Compliance Checking function.
P&L (%)	Hidden	The total profit and loss of the position, shown as a percentage. The reference currency is the same as the currency already used for the execution of the Valuation or Compliance Checking function.
Cap P&L	Displayed	The profit and loss in capital of the position, shown as an amount in the reference currency. The reference currency is the same as the currency already used for the execution of the Valuation or Compliance Checking function.
Cap P&L (%)	Hidden	The profit and loss in capital of the position, shown as a percentage. The reference currency is the same as the currency already used for the execution of the Valuation or Compliance Checking function.
Curr P&L	Displayed	The profit and loss in currency of the position, shown as an amount in the reference currency. The reference currency is the same as the currency already used for the execution of the Valuation or Compliance Checking function.
Curr P&L (%)	Hidden	The profit and loss in currency of the position, shown as a percentage. The reference currency is the same as the currency already used for the execution of the Valuation or Compliance Checking function.
Deposit	Hidden	The deposit's name of the instrument related to the position.

19.4.3 Operations section

The **Operations** section presents all operations related to the selected position, from a period from the date defined in the **Context** section of the Valuation or Compliance Checking to 18 months ago.

The following table explains what information is displayed in each column:

Column name	Default display	Description
Execution Date	Displayed	The date when the operation was executed.
Value Date	Hidden	The date when the operation can be foreseen as valued.
Accounting Date	Hidden	The date when the operation was accounted.
Operation Nature	Displayed	The operation's nature.
Operation Type	Displayed	The label of the operation's type. The display of the labels is based on the following rules: 1. If the translated denomination exists, then this value is used. 1. Else if the default denomination exists, then this value is used. 3. At least, the name is used.

Column name	Default display	Description
Instrument	Displayed	Shows the label of the instrument related to the operation. On the left, you can click the Details icon to see the corresponding instrument details in an additional window (for further information about icon images, see section Icons, fields, and links). It is possible that the instrument related to the operation is different than the instrument related to the selected position, especially if the instrument related to the selected position is a cash account and the operation is related to the income of another instrument (like dividends of a stock). The display of the labels is based on the following rules: 1. If the translated denomination exists, then this value is used. 2. Else if the default denomination exists, then this value is used. 3. At least, the name is used.
Instrument Code	Hidden	The code of the instrument related to the operation.
Quantity	Displayed	The traded quantity of the instrument related to the operation. For instruments with a face value, the quantity is shown as an amount and expressed in the instrument currency. Otherwise, the quantity is shown as units. This value is signed. A minus sign stands for an operation decreasing the position's quantity related to the instrument related to the operation. A plus sign stands for an operation increasing the position's quantity related to the instrument related to the operation. For example, a buy of security will have a plus sign if the selected position is related to the security and a plus sign if the selected position is related to the cash account used for the buy, even if the cash account is not the instrument related to the operation. On the right, you can click the Details icon to see the corresponding instrument details in an additional window (for further information about icon images, see section Icons, fields, and links).
Price	Displayed	The price paid or received per unit of quantity. For instruments with a face value, the price is shown as a percentage. Otherwise, it is shown as an amount in the instrument's currency
Net Amount (Op. Ccy.)	Displayed	The net amount of the operation in position currency. The net amount is the sum of the fees and taxes, the accrued interests, and the amount based on a computation between the price and the quantity. This value is signed. A minus sign stands for an operation decreasing a cash position's quantity, even if the selected position is a non-cash position. A minus sign stands for an operation increasing a cash position's quantity, even if the selected position is a non-cash position. For example, a buy of security will have a minus sign if the selected position is related to the security and a minus sign if the selected position is related to the cash account used for the buy, even if the cash account is not the instrument related to the operation.

Column name	Default display	Description
Net Amount (Ref. Ccy.)	Displayed	The net amount of the operation in reference currency. The net amount is the sum of the fees and taxes, the accrued interests, and the amount based on a computation between the price and the quantity. The reference currency is the same as the currency already used for the execution of the Valuation or Compliance Checking function. This value is signed. A minus sign stands for an operation decreasing a cash position's quantity, even if the selected position is a non-cash position. A minus sign stands for an operation increasing a cash position's quantity, even if the selected position is a non-cash position. For example, a buy of security will have a minus if the selected position is related to the security and a minus if the selected position is related to the cash account used for the buy, even if the cash account is not the instrument related to the operation.
Status	Hidden	Indicates the operation's status.
Operation Code	Hidden	The operation's code.
Reversal	Hidden	An indication about whether the operation is reversed or not. The available values are: • Empty (blank) if the operation is not reversed or not a reverse one. • Reverse if the operation is the reverse of a reversed operation. • Reversed if the operation is reversed.

20 Portfolio Risk

Documentation for the Portfolio Risk Module is only available for clients who have purchased its licence. The product guides are shipped with the module.

21 Reporting

This chapter explains how to use the Reporting function:

- [Overview](#)
- [Accessing the Reporting functionalities](#)
- [Creating new reports](#)
- [Viewing existing reports](#)
- [Sample reports](#)
- [Overview of report \(modules\) sections](#)

21.1 Overview

The Reporting function allows you to generate and read financial reports in PDF format. Once generated, the reports are automatically stored and can be accessed at any time through dedicated search screens.

The computation of the reports is asynchronous: you can work on other functions while reports are being computed. The status of a report indicates whether the report is available for viewing.

It is possible to generate reports on a set of portfolios. You can generate one report per portfolio, or you can generate only one report for the entire set of portfolios, but set it to contain distinct sections per portfolio. (For details, see section [Financial Parameters section](#).)

Note: The Proposal Generator report (PG report) is not part of this report generation process. For information about how to generate PG reports, see section [Proposal Generator](#).

21.1.1 Limit on the number of saved reports

Depending on the configuration chosen by the bank to store the reports, the number of reports kept in the system might be limited by the application. The only circumstance where the application does not impose any limits on the number of reports kept is if an external repository provided by the bank is used; in that case, how the repository is managed is the responsibility of the bank. If an external repository is not used, the application will delete once a day reports beyond the chosen configurable limit. The *Triple'A Plus Web Detailed Customisation Guide* describes how to configure this limit. By default, the limit is set to 100 reports per user. Older reports are deleted first.

21.1.2 Limit on the number of portfolios used in burst mode

Generating reports on a large set of portfolios using the burst consolidation mode could impact the performance of the system significantly. The burst consolidation rule enables the selection of a single list of portfolios and the generation of a single report per portfolio contained in that list.

Therefore, a configurable limit is available, and is set by default to 50 portfolios. If the set size is larger than this limit, an error message is displayed at launch time. The following values of the **Analysis Scope** drop-down menu are impacted by this limit when the burst mode is used: Client, Manager, Advisor, Portfolio List, Query, and Portfolio when using a parent portfolio requested to load its portfolio hierarchy.

The *Triple'A Plus Web Detailed Customisation Guide* describes how to configure this limit.

21.1.3 Limit on report capabilities depending on the consolidation rules

The reporting solution is packaged with some standard reports. They are developed with the same set of libraries, and can be limited in their capabilities depending on the consolidation rules used. For example, you are limited to Merged, Burst, and Tiled consolidation rules for the Client Statement report when the analysis scope is potentially based on more than one portfolio. This concerns the following analysis scopes: Portfolio list, Client, Advisor, Manager, Query, and also Portfolio when using a parent portfolio asked to load its portfolio hierarchy.

In the WUI, these limitations are already taken into account; you are shown only the current possibilities according to your current analysis scope. For more information about report capabilities, refer to the sections in this document that describe the reports.

21.2 Accessing the Reporting functionalities

To access the Reporting functionalities:

1. Select the **Portfolio Analysis** tab.
2. From the menu bar, go to one of the following:
 - **Analysis > Reporting > Create Report.**
Select this option to create a new report. Proceed to section [Creating new reports](#).
 - **Analysis > Reporting > Existing Report(s).**
Select this option to search and load existing reports. Proceed to section [Viewing existing reports](#).

21.3 Creating new reports

Once you have selected the **Create Report** menu option, as described in section [Accessing the Reporting functionalities](#), the report launching screen is displayed. This screen is displayed with the default values set in Triple'A Plus Core.

1. Modify the default parameters as desired. For guidance, see sections [Setup tab](#), [Output tab](#), and [Schedule tab](#) below. If you want to re-compute the default values, click the **Default Settings** button at the bottom of the screen.
2. Do one of the following:
 - Click the **Run and Display** button to generate a report and to display it in a pop-up screen
or
 - Click the **Run and Notify** button to generate a report using a background task.
3. If errors are raised (for example, technical errors or business errors defined in Triple'A Plus Core as input controls), an error message is displayed on the screen. These errors must be resolved before the report generation can continue.

If no errors are raised, the report is displayed in a pop-up screen (if you had clicked the **Run and Display** button) or generated in the background so that you can continue working (if you had clicked the **Run and Notify** button). In the latter case, you will be informed via the notification feature at the end of the generation process.
4. To view the report, you can access it via the notification monitor screen or proceed to section [Viewing existing reports](#).

21.3.1 Setup tab

The **Setup** tab contains the following section:

- [Report section](#)
- [Financial Parameters section](#)
- [Report Options section](#)
- [Report Blocks Selection section](#)

21.3.1.1 Report section

The drop-down menu in the Report section allows you to select a report. The available reports depend on the report profile associated with the user linked to your current WUI manager. Note that since Release 13.1, due to security reasons, the Proposal Generator report must be part of the report profile. However, as this report cannot be launched outside a whole proposal process, it is hidden in the list of available reports.

21.3.1.2 Financial Parameters section

The Financial Parameters section defines how the financial data is computed. Refer to the *Triple'A Plus Core Business Function Guide* for a detailed description of each parameter.

As financial parameters are strongly related to each report capability, refer to the *Triple'A Plus Packaging Reference Guide* or to the relevant subsections of the reports listed in section [Sample reports](#) in this guide.

Note: The **Financial Parameters** section is the only section in the Reporting work area that affects how data is computed; all other sections define how the data is displayed in the report.

21.3.1.3 Report Options section

The Report Options section defines several options linked to each report capabilities. These options are linked to the standard report using the Actuate e.Report technology.

The following table explains the effect of these options in the produced reports:

Parameter	Description
Color	Defines whether the report is in colour or in grey scale.
Anonymous	Defines whether sensitive client, portfolio or bank information appears or does not in the report.
Layout Style	The layout of the report. The style you choose changes the general appearance of the report, but not the content. Two layouts are provided in the standard packaging: Standard Blue and Standard Gold.

21.3.1.4 Report Blocks Selection section

The Report Blocks Selection section defines the dynamic content capabilities of each report. It permits end-users to hide some sections of the report as well as select to display more or less detailed information.

As report blocks selection parameters are strongly related to each report capability, refer to the *Triple'A Plus Packaging Reference Guide* or to the relevant subsections of the reports listed in section [Sample reports](#) in this guide.

21.3.2 Output tab

The following table explains how to use the options in the **Output** tab:

Parameter	Description
File Output Type	The format of the report that is generated. The available formats are PDF and PowerPoint for reports that use Actuate e.Report technology and Excel for those using Actuate e.Spreadsheet technology.

Parameter	Description
Output Name	The final report file name.

21.3.3 Schedule tab

The **Schedule** tab permits defining different and/or recurring report executions instead of immediate executions.

For more information about scheduled reports, see section [Report scheduling](#).

21.4 Viewing existing reports

21.4.1 Process

Once you have selected the **Existing Report(s)** menu option, as described in section [Accessing the Reporting functionalities](#), the report search screen is displayed. This is the same screen that is displayed at the end of the report creation process.

The search screen contains the **Today**, **Scheduled Today** and **All** tabs. The main difference is that the **Today** tab displays only reports generated by the current user on the current day (immediate or scheduled reports). The **Scheduled Today** tab displays scheduled reports generated today that users can access according to their data profile even if the user is not the creator of the schedules, while there is no such limitation in the **All** tab.

Most of the fields displayed on the search screen and most of the search criteria are the report creation parameters described in the launching reports section or in each specific report description.

There are several exceptions. The first exception is the status field. The status of a report is indicated using icons, and can be one of the following options.

- **Hourglass** icon: The report is being generated and is not yet ready for viewing.
- **Checkmark** icon: The report is available for viewing. The report can be opened by clicking on the icon in the Report column.
- **Cross** icon: The report generation has failed.

For information about the icon images, see section [Icons, fields, and links](#).

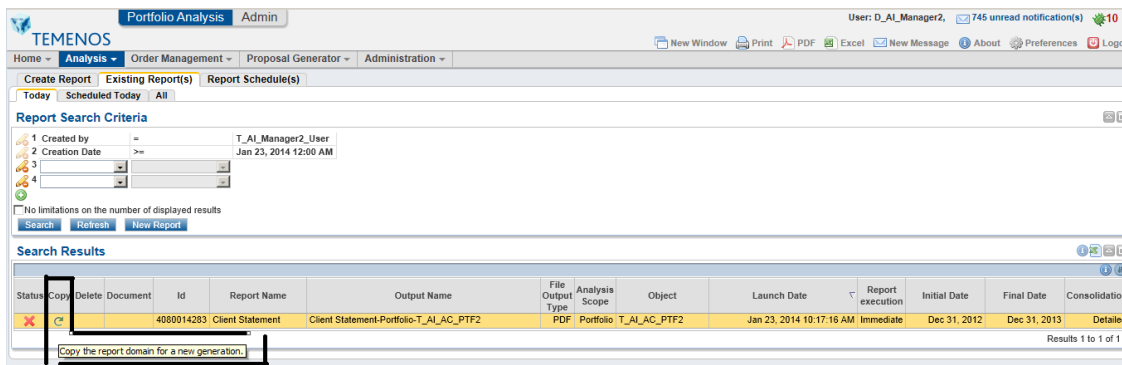

The second exception is the **Copy** icon. This icon represents a user action that allows copying a whole previous domain to launch a similar report or performing some small modifications on a previous report generation. By clicking on this icon, the report creation page shows up with the same domain of the previously selected report generation. The end-user can then either modify some parameters or immediately generate the report.

The last exception is the **Delete** icon. This icon permits deleting a previously generated report. If the report was successfully generated, this action will also remove the produced file from the document repository.

Regarding the available buttons on the screen, the **Refresh** button updates the information on the screen, typically the status of the reports. The **New Report** button opens the report creation screen (see section [Creating new reports](#)).

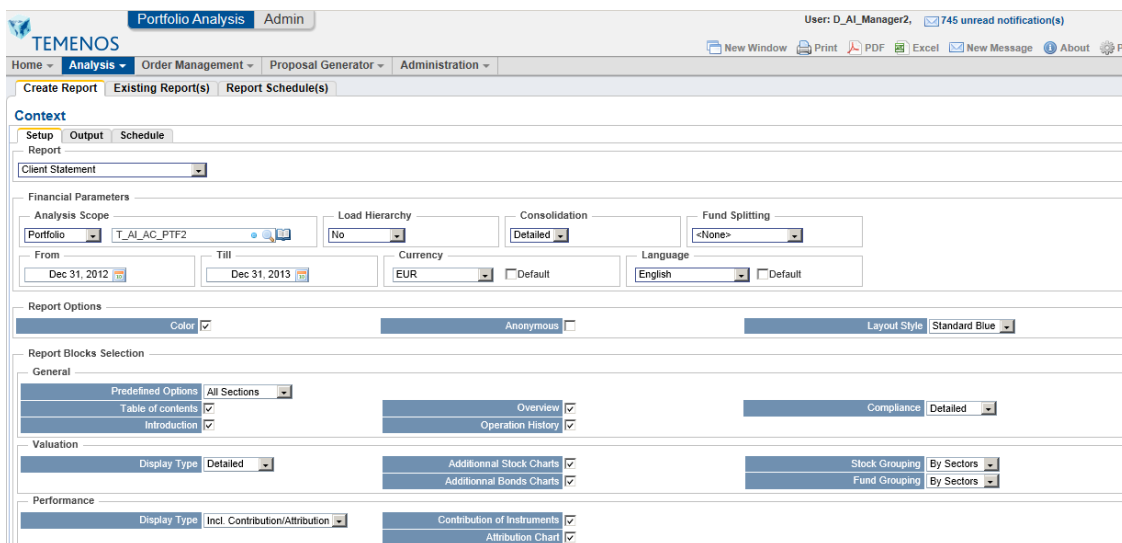

Note that reports generated via the **Run and Display** option will not be displayed in the Existing Report(s) screen as they are not stored in the report repository by default. This behaviour can be changed through customisation.

21.4.2 Copying report parameters

This feature allows you to quickly generate a report by copying parameters that were used to generate an earlier report. When you click **Copy** on the **Existing Reports Search Results** screen, you are redirected to the **Create Report** screen with parameters copied from the earlier report. You can then choose to modify some parameters or to regenerate the report without any changes. The date range (set in the **From** field and **Till** field) is reinitiated in this process to default values.

This feature is available for failed reports as well as successful reports.

21.5 Sample reports

The following reports are shipped with Triple'A Plus:

- [Client Statement Report](#)
- [Compliance Deviation Analysis Report](#)
- [Compliance Deviation Dashboard](#)
- [Held Assets Analysis Report](#)
- [Liquidity Excess Dashboard](#)
- [Low Activity Client Dashboard](#)
- [Market Value and Profit & Loss Analysis Report](#)
- [Performance Deviation Dashboard](#)

- [Proposal Client Candidate Dashboard](#)
- [Sample Actuate Excel Report](#)
- [Sample Module Excel Report](#)

21.5.1 Client Statement Report

The Client Statement Report (previously named Private Banking Report) uses the Actuate e.Report technology. It is the standard report customized by every client who needs to create an initial report quickly. The report displays some general and detailed information derived from Triple'A Plus financial functions such as the valuation of the portfolio's current positions, the portfolio performance of the period compared to a benchmark, an analysis of the future cash flow, an operations' history on the period, and a detailed compliance check.

The Client Statement Report employs Triple'A Plus Reporting functionalities such as style sheet usage that makes it possible to change the whole report layout at runtime (see section [Report Options section](#)), and report modularity that permits the sharing of report sections with other reports, or changing report contents by activated/deactivated sections (using the Report Block Selection options; see section [Report Blocks Selection section](#)). Once a section is deactivated, the report will not call any unneeded financial functions, speeding up the report generation time.

The sections of the report will appear in the following order:

- [Cover page](#)
- [Information page \(with table of contents\)](#)
- [Overview section](#)
- [Asset Allocation section](#)
- [Asset Allocation - Additional Charts section](#)
- [Simple List of Positions section](#)
- [Detailed List of Positions section](#)
- [Currency Exposure section](#)
- [Operation History section](#)
- [Performance Analysis section](#)
- [Performance Contribution Summary section](#)
- [Performance Contribution Details section](#)
- [Performance Attribution Summary section](#)
- [Performance Attribution Details section](#)
- [Cash Flow Analysis section](#)
- [Cash Flow Details section](#)
- [Compliance Summary section](#)
- [Compliance By Portfolio section](#)
- [Disclaimer section](#)

If the report cannot produce any pages because no data can be retrieved for the current analysis scope, only the No Data section appears as a small page indicating that there is no data for the selected report scope.

The following sections provide information about how the Client Statement Report is defined:

- [Financial parameters](#)
- [Report options](#)
- [Report blocks selection](#)

21.5.1.1 Financial parameters

Parameter	Description
Analysis Scope	Available scopes for this report are Portfolio, Client, Manager, Advisor, Portfolio List, and Query.
Load Hierarchy	Capability of loading the portfolio hierarchy or not. Possible actions are From Parent or no hierarchy.
Consolidation	For a single portfolio (without loading any possible portfolio hierarchy), the only consolidation mode is Detailed. For a multi-portfolio scope like Client, Manager, Advisor, Portfolio List, Query or for a Portfolio scope while loading a possible hierarchy, the available consolidation modes are Merged, Tiled, and Burst.
Fund Splitting	Specifies how Mutual Funds are split. No restrictions.
Initial Date	Used as the initial date for the performance and operation history functions launched by the report.
Final Date	Used as the final date for the performance and operation history functions. Also used as the valuation date and the initial date for the future cash flow (next five years cash flow).
Currency	Reference currency.
Default Currency	Checkbox that allows the use of the currency of the portfolio as the reference currency. Useful for tiled or burst on multiple scope generation for having a reference currency different per portfolio.
Language	Language of the report. Even if the drop-down list permits the selection of any language, the sample reports are developed to support English, French, and German languages only.
Default Language	Checkbox that allows the use of the language of the portfolio as the report language. Useful for tiled or burst on multiple scope generation for having a language different per portfolio.

21.5.1.2 Report options

Standard report options are available as described previously.

21.5.1.3 Report blocks selection

Parameter	Description
General section	
Predefined Options	Each predefined option value corresponds to a set of default values for the report blocks selection. By default, two values are provided: "light summary" and "all sections".
Table of contents	If checked, a table of contents is included.
Introduction	If checked, an introduction page is included.
Overview	If checked, an overview screen is included.
Operation History	If checked, a section that displays a chronological list of operations is included.
Compliance	Available options are: <i>Not shown</i>: no compliance section is included. <i>Summary</i>: the main compliance figures appear on the report. <i>Detailed</i>: all comprehensive compliance figures appear on the report and detailed by portfolios.
Valuation section	

Parameter	Description
Display Type	Available options are: <i>Not shown</i>: no valuation section is included. <i>Summary</i>: only asset allocation appears on the report. <i>Simple</i>: a light version of a list of positions appears on the report. <i>Detailed</i>: a comprehensive list of positions appears on the report.
Additional Stock Charts	If checked, a stock chart is added to the report after the asset allocation.
Additional Bonds Charts	If checked, a bond chart is added to the report after the asset allocation.
Stock Grouping	On some valuation views, stocks are displayed grouped according to this criterion. The following grouping criteria are available: <i>By Sectors</i>: the sector of the stock. <i>By Regions</i>: the geographical region where the stock is issued.
Fund Grouping	On some valuation views, the instruments composing a fund are displayed grouped according to this criterion. The following grouping criteria are available: <i>By Sectors</i>: the sector of the instrument. <i>By Regions</i>: the geographical region of the instrument.
Performance section	
Display Type	Available options are: <i>Not shown</i>: no performance section is included. <i>Summary</i>: global performance section appears on the report. <i>Incl. Contribution</i>: in addition to the global performance section, the contribution section will also appear on the report. <i>Incl. Contribution/Attribution</i>: in addition to the global performance and contribution sections, the attribution section will also appear on the report.
Contribution of Instruments	If checked, the contribution section will display information up to the instrument level, otherwise, it will use the market segment from the grid (default screen option).
Attribution Chart	If checked, the monthly attribution chart is added to the report after the detailed attribution data.
Cash Flow section	
Display Type	Available options are: <i>Not shown</i>: no cash flow section is included. <i>Summary</i>: only the future cash flow matrix appears on the report. <i>Detailed</i>: both a section with the cash flow list (by year, by currency, and by instruments) and a section with the cash flow list by period appear on the report.
Additional Maturity Chart	If checked, a maturity chart is added to the report after the cash flow matrix.
Additional Currency Chart	If checked, a currency chart is added to the report after the cash flow matrix.

21.5.2 Compliance Deviation Analysis Report

The Compliance Deviation Analysis Report uses the Actuate e.Report technology and is part of the Analysis report catalogue. The report displays summary and detailed information of portfolios that deviate from their compliance derived from Triple'A Plus financial functions.

The Compliance Deviation Analysis report identifies portfolio misalignment relating to objectives and constraints compliance. It is based on the financial function format

REP_STD_COMPCHK that queries misaligned portfolios due to non-compliance of either their objectives or constraints.

This report employs Triple'A Plus Reporting functionalities such as style sheet usage that makes it possible to change the whole report layout at runtime runtime (see section [Report Options section](#)), as well as report modularity that permits the choice of content at runtime.

The sections of the report will appear in the following order:

- [Cover page](#)
- [Information page \(with table of contents\)](#)
- [Introduction section](#)
- [Compliance Deviation Summary section \(based on financial function\)](#)
- [Compliance Deviation Details section \(based on financial function\)](#)
- [Disclaimer section](#)

If the report cannot produce any pages because it cannot retrieve any data for the current analysis scope, another section will appear indicating that there is no data for the selected report scope.

The following sections provide information about how the Compliance Deviation Analysis Report is defined:

- [Financial parameters](#)
- [Report options](#)
- [Report blocks selection](#)

21.5.2.1 Financial parameters

Parameter	Description
Analysis Scope	Available scopes for this report are Portfolio, Client, Manager, Advisor, Portfolio List, and Query.
Load Hierarchy	Capability of loading the portfolio hierarchy or not. Possible actions are From Parent or no hierarchy.
Consolidation	As the report displays the distribution of portfolio that has deviated from their objectives, constraints, or both, the only possible consolidation mode is Detailed. Providing other modes will conflict with the purpose of the report.
Date	Used as the pivot date for the compliance function execution.
Currency	Reference currency.
Default Currency	Checkbox permitting the use of the currency of the portfolio as the reference currency.
Language	Language of the report. Even if the drop-down list permits the selection of any language, the sample reports are developed to support English, French, and German languages only.
Default Language	Checkbox permitting the use of the language of the portfolio as the report language.

21.5.2.2 Report options

Standard report options are available as described previously.

21.5.2.3 Report blocks selection

Parameter	Description
Predefined Options	Each predefined option value corresponds to a set of default values for the report blocks selection. By default, two values are provided: "light summary" and "all sections".

Parameter	Description
Table of contents	If checked, a table of contents is included.
Display Type	Available options are: <i>Summary</i>: only the Compliance Deviation Summary section appears on the report. Using this option, the Compliance Deviation Details section will not be generated. <i>Detailed</i>: both the Compliance Deviation Summary and Details section appear on the report.
Introduction	If checked, an introduction page is included.

21.5.3 Compliance Deviation Dashboard

The Compliance Deviation Dashboard uses the Actuate e.Report technology and is part of the Audit & Business Intelligence report catalogue. The reports in this catalogue employ pre-defined queries (i.e., accessing pre-computed data) instead of Triple'A Plus financial functions.

The Compliance Deviation Dashboard identifies portfolio misalignment relating to objectives and constraints compliance. It is based on the pre-defined query PCK_DS_PTF_QUERY_16 that queries misaligned portfolios due to the non-compliance of either their objectives or constraints.

This report employs Triple'A Plus Reporting functionalities such as style sheet usage that makes it possible to change the whole report layout at runtime (see section [Report Options section](#)), as well as report modularity that permits the sharing of report sections with other reports.

The sections of the report will appear in the following order:

- [Cover page](#)
- [Compliance Deviation section \(based on pre-computed data\)](#)

If the report cannot produce any pages because it cannot retrieve any data for the current analysis scope, another section will appear indicating that there is no data for the selected report scope.

The following sections provide information about how the Compliance Deviation Dashboard is defined:

- [Financial parameters](#)
- [Report options](#)
- [Report blocks selection](#)

21.5.3.1 Financial parameters

As it is based on a predefined query, there is no financial parameter available for the report.

21.5.3.2 Report options

Audit reports such as this one have specific report options.

Parameter	Description
Language	Language of the report. Even if the drop-down list permits the selection of any language, the sample reports are developed to support English, French, and German languages only.
Color	Defines whether the report is in colour or in grey scale.

Parameter	Description
Layout Style	The layout of the report. The style you choose changes the general appearance of the report but not the content. Two layouts are provided in the standard packaging: Standard Blue and Standard Gold.

21.5.3.3 Report blocks selection

There is no report block selection for this report.

21.5.4 Held Assets Analysis Report

The Held Assets Analysis Report uses the Actuate e.Report technology. The report displays summary and detailed information of positions held by portfolios or client derived from Triple'A Plus financial functions.

The Held Assets Analysis Report employs Triple'A Plus Reporting functionalities such as style sheet usage that makes it possible to change the whole report layout at runtime (see section [Report Options section](#)), and report modularity that permits the sharing of report sections with other reports, or changing report contents by activated/deactivated sections (using the Report Block Selection options; see section [Report Blocks Selection section](#)). Once a section is deactivated, the report will not call any unneeded financial functions, which will speed up the report generation time.

The sections of the report will appear in the following order:

- [Cover page](#)
- [Information page \(with table of contents\)](#)
- [Introduction section](#)
- [Asset Allocation section](#)
- [Stocks Allocation section](#)
- [Fixed Income Allocation section](#)
- [Funds Allocation section](#)
- [Derivatives Allocation section](#)
- [Liquidity Allocation section](#)
- [Money Market Allocation section](#)
- [Forwards Allocation section](#)
- [Other Assets Allocation section](#)
- [Held Asset Detail section](#)
- [Disclaimer section](#)

If the report cannot produce any pages because no data can be retrieved for the current analysis scope, only the No Data section appears as a small page indicating that there is no data for the selected report scope.

The following sections provide information about how the Held Assets Analysis Report is defined:

- [Financial parameters](#)
- [Report options](#)
- [Report blocks selection](#)

21.5.4.1 Financial parameters

Parameter	Description
Analysis Scope	Available scopes for this report are All, Portfolio, Client, Manager, Advisor, Portfolio List, and Query. If the "All" scope is selected, some instrument scope must be defined using a single instrument or an instruments' list. Selecting "All" for both analysis scope and instrument scope is not permitted.
Instrument Set	Instrument scopes for this report are All, Instrument, and Instrument List.
Load Hierarchy	Capability of loading the portfolio hierarchy or not. Possible actions are From Parent or no hierarchy.
Consolidation	Possible consolidation modes from this report are Detailed, Tiled, and Burst. Tiled and Burst modes are only available for multi-portfolio scope. Merged mode is not available as it conflicts with the purpose of the report.
Date	Used as the pivot date for the valuation function execution.
Fund Splitting	Specifies how Mutual Funds are split. No restrictions.
Currency	Reference currency.
Default Currency	Checkbox permitting the use of the currency of the portfolio as the reference currency.
Language	Language of the report. Even if the drop-down list permits the selection of any language, the sample reports are developed to support English, French, and German languages only.
Default Language	Checkbox permitting the use of the language of the portfolio as the report language.

21.5.4.2 Report options

Standard report options are available as described previously.

21.5.4.3 Report blocks selection

Parameter	Description
Predefined Options	Each predefined option value corresponds to a set of default values for the report blocks selection. By default, two values are provided: "light summary" and "all sections".
Table of contents	If checked, a table of contents is included.
Display Type	Available options are: <i>Summary</i>: only the Held Asset Summary sections appear on the report. Using this option, the Details section will not be generated. <i>Detailed</i>: both the Held Asset Summary and Details sections appear on the report.
Introduction	If checked, an introduction page is included.

21.5.5 Liquidity Excess Dashboard

The Liquidity Excess Dashboard uses the Actuate e.Report technology and is part of the Audit & Business Intelligence report catalogue. The reports in this catalogue employ pre-defined queries (i.e., accessing pre-computed data) instead of Triple'A Plus financial functions.

The Liquidity Excess Dashboard tracks portfolios that have a high ratio of cash to identify them as possible candidates for investment proposals due to their high investment capacity. It is based on the pre-defined query PCK_DS_PTF_QUERY_05, which queries portfolios that have more than 70% in cash.

This report employs Triple'A Plus Reporting functionalities such as style sheet usage that makes it possible to change the whole report layout at runtime (see section [Report Options section](#)) as well as report modularity that permits the sharing of report sections with other reports.

The sections of the report will appear in the following order:

- [Cover page](#)
- [Liquidity Excess Portfolio section](#)

If the report cannot produce any pages because it cannot retrieve any data for the current analysis scope, another section will appear indicating that there is no data for the selected report scope.

The following sections provide information about how the Liquidity Excess Dashboard is defined:

- [Financial parameters](#)
- [Report options](#)
- [Report blocks selection](#)

21.5.5.1 Financial parameters

As it is based on a predefined query, there is no financial parameter available for the report.

21.5.5.2 Report options

Audit reports such as this one have specific report options.

Parameter	Description
Language	Language of the report. Even if the drop-down list permits the selection of any language, the sample reports are developed to support English, French, and German languages only.
Color	Defines whether the report is in colour or in grey scale.
Layout Style	The layout of the report. The style you choose changes the general appearance of the report but not the content. Two layouts are provided in the standard packaging: Standard Blue and Standard Gold.

21.5.5.3 Report blocks selection

There is no report blocks selection for this report.

21.5.6 Low Activity Client Dashboard

The Low Activity Client Dashboard uses the Actuate e.Report technology and is part of the Audit & Business Intelligence report catalogue. The reports in this catalogue employ pre-defined queries (i.e., accessing pre-computed data) instead of Triple'A Plus financial functions.

The Low Activity Client Dashboard identifies client's portfolios that have been inactive for a certain period of time (currently any consecutive 180 days). It is based on the pre-defined query PCK_DS_CLT_QUERY_01, which queries clients' portfolios that have not had any transactions during a certain period.

This report employs Triple'A Plus Reporting functionalities such as style sheet usage that makes it possible to change the whole report layout at runtime (see section [Report Options section](#)), as well as report modularity that permits the sharing of report sections with other reports.

The sections of the report will appear in the following order:

- [Cover page](#)

- [Low Activity Client section](#)

If the report cannot produce any pages because it cannot retrieve any data for the current analysis scope, another section will appear indicating that there is no data for the selected report scope.

The following sections provide information about how the Low Activity Client Dashboard is defined:

- [Financial parameters](#)
- [Report options](#)
- [Report blocks selection](#)

21.5.6.1 Financial parameters

As it is based on a predefined query, there is no financial parameter available for the report.

21.5.6.2 Report options

Audit reports such as this one have specific report options.

Parameter	Description
Language	Language of the report. Even if the drop-down list permits the selection of any language, the sample reports are developed to support English, French, and German languages only.
Color	Defines whether the report is in colour or in grey scale.
Layout Style	The layout of the report. The style you choose changes the general appearance of the report but not the content. Two layouts are provided in the standard packaging: Standard Blue and Standard Gold.

21.5.6.3 Report blocks selection

There is no report block selection for this report.

21.5.7 Market Value and Profit & Loss Analysis Report

The Market Value and Profit & Loss Analysis Report uses the Actuate e.Report technology. This report provides analysis of profit and losses of portfolios and positions derived from Triple'A Plus valuation financial functions.

The Market Value and Profit & Loss Analysis Report employs Triple'A Plus Reporting functionalities such as style sheet usage that makes it possible to change the whole report layout at runtime (see section [Report Options section](#)), and report modularity that permits the sharing of report sections with other reports, or changing report contents by activated/deactivated sections (using the Report Block Selection options; see section [Report Blocks Selection section](#)). Once a section is deactivated, the report will not call any unneeded financial functions, which speeds up the report generation time.

The sections of the report will appear in the following order:

- [Cover page](#)
- [Information page \(with table of contents\)](#)
- [Introduction section](#)
- [Market Value and P&L Summary section](#)
- [Market Value and P&L Details section](#)
- [Disclaimer section](#)

If the report cannot produce any pages because no data can be retrieved for the current analysis scope, only the No Data section appears as a small page indicating that there is no data for the selected report scope.

The following sections provide information about how the Market Value and Profit & Loss Analysis Report is defined:

- [Financial parameters](#)
- [Report options](#)
- [Report blocks selection](#)

21.5.7.1 Financial parameters

Parameter	Description
Analysis Scope	Available scopes for this report are Portfolio, Client, Manager, Advisor, Portfolio List, and Query.
Load Hierarchy	Capability of loading the portfolio hierarchy or not. Possible actions are From Parent or no hierarchy.
Consolidation	As the report displays the distribution of portfolios per P&L category (Negative P&L, null, or positive) and detailed information by portfolio, the only possible consolidation mode is Detailed. Providing other modes will conflict with the purpose of the report.
Date	Used as the pivot date for the valuation function execution.
Currency	Reference currency.
Default Currency	Checkbox permitting the use of the currency of the portfolio as the reference currency.
Language	Language of the report. Even if the drop-down list permits the selection of any language, the sample reports are developed to support English, French, and German languages only.
Default Language	Checkbox permitting the use of the language of the portfolio as the report language.

21.5.7.2 Report options

Standard report options are available as described previously.

21.5.7.3 Report blocks selection

Parameter	Description
Predefined Options	Each predefined option value corresponds to a set of default values for the report blocks selection. By default, two values are provided: "light summary" and "all sections".
Table of contents	If checked, a table of contents is included.
Display Type	Available options are: • <i>Summary</i>: only the Market value and P&L summary section appear on the report. Using this option, the Details section will not be generated. • <i>Detailed</i>: both the Market value and P&L Summary and Details sections appear on the report.
Introduction	If checked, an introduction page is included.

21.5.8 Performance Deviation Dashboard

The Performance Deviation Dashboard uses the Actuate e.Report technology and is part of the Audit & Business Intelligence report catalogue. The reports in this catalogue employ pre-defined queries (i.e., accessing pre-computed data) instead of Triple'A Plus financial functions.

The Performance Deviation Dashboard identifies portfolios with performances below a certain threshold. It is based on the pre-defined query PCK_DS_PTF_QUERY_09, which queries portfolios that have their past 12 month's performance less than 6% for discretionary mandates and 12% for advisory mandates. Both values are held in the packaging parameters DS_QUERY_RETURN_1 and DS_QUERY_RETURN_2.

This report employs Triple'A Plus Reporting functionalities such as style sheet usage that makes it possible to change the whole report layout at runtime (see section [Report Options section](#)), as well as report modularity that permits the sharing of report sections with other reports.

The sections of the report will appear in the following order:

- [Cover page](#)
- [Performance Deviation section](#)

If the report cannot produce any pages because it cannot retrieve any data for the current analysis scope, another section will appear indicating that there is no data for the selected report scope.

The following sections provide information about how the Performance Deviation Dashboard is defined:

- [Financial parameters](#)
- [Report options](#)
- [Report blocks selection](#)

21.5.8.1 Financial parameters

As it is based on a predefined query, there is no financial parameter available for the report.

21.5.8.2 Report options

Audit reports such as this one have specific report options.

Parameter	Description
Language	Language of the report. Even if the drop-down list permits the selection of any language, the sample reports are developed to support English, French, and German languages only.
Color	Defines whether the report is in colour or in grey scale.
Layout Style	The layout of the report. The style you choose changes the general appearance of the report, but not the content. Two layouts are provided in the standard packaging: Standard Blue and Standard Gold.

21.5.8.3 Report blocks selection

There is no report block selection for this report.

21.5.9 Proposal Client Candidate Dashboard

The Proposal Client Candidate Dashboard uses the Actuate e.Report technology and is part of the Audit & Business Intelligence report catalogue. The reports in this catalogue employ pre-defined queries (i.e., accessing pre-computed data) instead of Triple'A Plus financial functions.

The Proposal Client Candidate Dashboard identifies clients who have an advisory mandate but have not received an investment proposal for a certain period (currently 30 days). It is based on the pre-defined query PCK_DS_CLT_QUERY_02.

This report employs Triple'A Plus Reporting functionalities such as style sheet usage that makes it possible to change the whole report layout at runtime (see section [Report Options](#)

[section](#)), as well as report modularity that permits the sharing of report sections with other reports.

The sections of the report will appear in the following order:

- [Cover page](#)
- [Proposal Client Candidate section](#)

If the report cannot produce any pages because it cannot retrieve any data for the current analysis scope, another section will appear indicating that there is no data for the selected report scope.

The following sections provide information about how the Performance Deviation Dashboard is defined:

- [Financial parameters](#)
- [Report options](#)
- [Report blocks selection](#)

21.5.9.1 Financial parameters

As it is based on a predefined query, there is no financial parameter available for the report.

21.5.9.2 Report options

Audit reports such as this one have specific report options.

Parameter	Description
Language	Language of the report. Even if the drop-down list permits the selection of any language, the sample reports are developed to support English, French, and German languages only.
Color	Defines whether the report is in colour or in grey scale.
Layout Style	The layout of the report. The style you choose changes the general appearance of the report, but not the content. Two layouts are provided in the standard packaging: Standard Blue and Standard Gold.

21.5.9.3 Report blocks selection

There is no report block selection for this report.

21.5.10 Sample Actuate Excel Report

The Sample Actuate Excel Report is the standard report customized by every client who needs to create a Microsoft Excel report quickly. This report shows different way of displaying data using the Actuate e.Spreadsheet technology. Some general and detailed information derived from Triple'A Plus financial functions are displayed such as the valuation of the portfolio's current positions and the list of transactions. As it will produce a true Microsoft Excel document, it also contains a pivot table that can be used by the end user to perform an analysis of the valuation data.

The sections of the report will appear in the following order:

- [Portfolio Overview section](#)
- [Portfolio Statement section](#)
- [Portfolio Transaction section](#)
- [Charts on Raw Data section](#)
- [Pivot Table on Valuation Data section](#)

The following sections provide information about how the Sample Actuate Excel Report is defined:

- [Financial parameters](#)

21.5.10.1 Portfolio Overview section

The Portfolio Overview section provides a quick overview of the valuation and performance data. It displays on a single page an asset allocation overview including its representation in a pie chart, a performance overview of the period, and a chart representing the monthly performance of the period with an associated benchmark performance.

21.5.10.2 Portfolio Statement section

The Portfolio Statement section displays a simple list of positions with the same information for each asset class. According to the number of positions of the portfolio, this section can be displayed on several pages.

21.5.10.3 Portfolio Transaction section

The Portfolio Transaction section displays the list of operations during the selected period. The description of the operation is the concatenation of the operation nature, quantity, instrument, and price.

21.5.10.4 Charts on Raw Data section

The Charts on Raw Data section displays two allocation charts - by currency and by region - of the valuation data. It shows that the Actuate e.Spreadsheet technology can produce a true Excel charts that will adapt to data changes and to which layout can be reworked by the end-user.

21.5.10.5 Pivot Table on Valuation Data section

The Pivot Table on Valuation Data section displays a pivot table with data based on the valuation financial function. It shows that the Actuate e.Spreadsheet technology can produce a true Excel pivot table that can be used by the end user to perform an analysis of the data by playing with the different pivot table dimensions (e.g., asset class, position currency, sector, maturity, rating, region, currency class, geographical risk, etc.) and measures (e.g., market value, price, cost price, profit and loss, etc.) The data resulting from the financial function are included in the report, which allows, once generated, the analysis of the data without the need to be connected to the Triple'A Plus environment.

21.5.10.6 Financial parameters

Parameter	Description
Analysis Scope	Available scopes for this report are Portfolio, Client, Manager, Advisor, Portfolio List, and Query.
Load Hierarchy	Capability of loading the portfolio hierarchy or not. Possible actions are From Parent or no hierarchy.
Consolidation	Possible consolidation modes from this report are Merged, Detailed, and Burst. Tiled mode is not possible with a report using the Actuate e.Spreadsheet technology. Merged and Burst modes are only available for multi-portfolio scope.
Initial Date	Used as the initial date for the performance and operation history functions launched by the report.
Final Date	Used as the final date for the performance and operation history functions. Also used as the valuation date.
Currency	Reference currency.
Default Currency	Checkbox permitting the use of the currency of the portfolio as the reference currency.

Parameter	Description
Language	Language of the report. Even if the drop-down list permits the selection of any language, the sample reports are developed to support English, French, and German languages only.
Default Language	Checkbox permitting using the language of the portfolio as report language.

21.5.11 Sample Module Excel Report

The Sample Module Excel Report uses the Actuate e.Spreadsheet technology. It shows how to migrate from the old Excel module report (which is a removed GUI feature) to the Actuate e.Spreadsheet technology.

21.6 Overview of report (modules) sections

In this section, you will find an alphabetical listing of all report (modules) sections that can be used in different master reports. This can be achieved only using the Actuate e.Report technology.

- [Asset Allocation section](#)
- [Asset Allocation - Additional Charts section](#)
- [Cash Flow Analysis section](#)
- [Cash Flow Details Details section](#)
- [Compliance Deviation Summary section \(based on financial function\)](#)
- [Compliance Deviation Details section \(based on financial function\)](#)
- [Compliance Deviation section \(based on pre-computed data\)](#)
- [Compliance Summary section](#)
- [Compliance By Portfolio section](#)
- [Cover page](#)
- [Currency Exposure section](#)
- [Detailed List of Positions section](#)
- [Derivatives Allocation section](#)
- [Disclaimer section](#)
- [Fixed Income Allocation section](#)
- [Forwards Allocation section](#)
- [Funds Allocation section](#)
- [Held Asset Detail section](#)
- [Information page \(with table of contents\)](#)
- [Introduction section](#)
- [Liquidity Allocation section](#)
- [Liquidity Excess Portfolio section](#)
- [Low Activity Client section](#)
- [Market Value and P&L Summary section](#)
- [Market Value and P&L Details section](#)
- [Money Market Allocation section](#)
- [Operation History section](#)
- [Other Assets Allocation section](#)
- [Overview section](#)
- [Performance Analysis section](#)

- [Performance Attribution Summary section](#)
- [Performance Attribution Details section](#)
- [Performance Contribution Summary section](#)
- [Performance Contribution Details section](#)
- [Performance Deviation section](#)
- [Proposal Client Candidate section](#)
- [Simple List of Positions section](#)
- [Stocks Allocation section](#)

21.6.1.1 Asset Allocation section

The Asset Allocation section is one of the valuation sections. It displays in a single page a valuation summary of the portfolio, with an asset allocation matrix by currency classification, an asset allocation chart, a currency classification allocation chart, and the exchange rates of the currencies.

21.6.1.2 Asset Allocation - Additional Charts section

The Asset Allocation – Additional Charts section is one of the valuation sections. It displays in a single page two groups of charts:

- Fixed incomes charts group, which displays the fixed incomes allocation by maturity, rating, and region.
- Stocks charts group, which displays the stocks allocation by sector, rating, and region.

21.6.1.3 Cash Flow Analysis section

The Cash Flow Analysis section is one of the cash flow sections. It displays in a single page the future cash flow in a matrix, grouped by currencies classification for the next five years. It also shows two charts: the cash flow by currencies stacked by years and the cash flow by years stacked by currencies for the next five years. Note that the five years period can be dynamically configured via the report configuration file. A five-year period is the default period.

21.6.1.4 Cash Flow Details Details section

The Cash Flow Details section is one of the cash flow sections. It displays the details of the future cash flow for the next five years for each instrument that will have some incoming or outgoing flows. It displays this information grouped by year up to the instrument level, detailing the income and buy or sell flows by currencies. All amounts are expressed in the reference currency so that the report can provide totals by instruments, flows, and years.

Then, this section displays another set of future cash flow details for the next six years grouped by currencies and years but not going up to the instrument level as previously done and will display the amounts using the currency of the position. For each currency, a total is computed and expressed both in the current currency and in the reference currency.

Note that the five-year or six-year period can be dynamically configured via the report configuration file. The proposed periods are used as default values.

21.6.1.5 Compliance Deviation Summary section (based on financial function)

The Compliance Deviation Summary section is one of the compliance deviation sections. It displays two different sub-sections categorised by the following deviation types:

- Objective and constraint deviation
- Objective deviation only
- Constraint deviation only

First, it displays a chart presenting the portfolio distribution by deviation type. Then, it displays a table of portfolios grouped by deviation type displaying their respective market values.

Note that portfolios that are fully compliant will not be displayed.

21.6.1.6 Compliance Deviation Details section (based on financial function)

The Compliance Deviation Details section is one of the compliance deviation sections. It displays detailed information for each portfolio segmented by:

- Portfolio deviating from both their objectives and constraints.
- Portfolio deviating from the objectives only.
- Portfolio deviating from the constraints only.

For each portfolio and according to their current compliance deviation, it will display either their detailed constraint compliance, detailed objective compliance, or both, based on the standard compliance sections.

Note that portfolios that are fully compliant will not be displayed.

21.6.1.7 Compliance Deviation section (based on pre-computed data)

The Compliance Deviation section is one of the compliance deviation sections but uses pre-computed data instead of those from instant financial function execution. This section displays two different sub-sections. First, it displays three charts side-by-side, presenting the portfolio distribution that deviates from their objectives compliance, constraints compliance, and both. Each chart displays the number of portfolio per deviation severity. Then, it displays a table of portfolios sorted first by the best candidate for realignment in terms of compliance according to the deviation severity (i.e., highest global severity and highest strategy deviation).

Note that portfolios that are fully compliant will not be displayed.

21.6.1.8 Compliance Summary section

The Compliance Summary section is one of the compliance sections. It shows a summary of all portfolios and their compliance against each one's strategy.

21.6.1.9 Compliance By Portfolio section

The Compliance By Portfolio section is one of the compliance sections. It has two main sections for each portfolio in the list: the Compliance Comparison and Constraints section and the Compliance Details section.

The Compliance Comparison and Constraints section shows two compliance graphs and the list of constraints. One chart provides compliance comparison by asset class showing the current assets weights compared to the objectives, while a second one displays the portfolio allocation against the different currency classification of the held positions.

The Compliance Details section shows all strategy compliance for the current portfolio grouped by sub-segments and drilled down to instruments.

For each portfolio in the scope, both sections will be repeated. This means the financial function used to generate the data will be forced to a detailed consolidation mode.

21.6.1.10 Cover page

The first page of the report is the cover page. It shows the report titles and a cover page image.

If the report has been set to be generated anonymously using the report options (see section [Report Options](#) section), the cover page image will disappear because it could contain a bank's logo. Additionally, the small logo in the top left corner of the page will disappear from all pages.

21.6.1.11 Currency Exposure section

The Currency Exposure section is one of the valuation sections. It displays the list of currencies with their respective exposure. Additionally, it shows the currency allocation in a chart and the list of the respective exchange rates.

21.6.1.12 Detailed List of Positions section

The Detailed List of Positions section is one of the valuation sections. It displays the detailed list of positions with specific information for each asset class. It is followed by the exchange rates of the available currencies. According to the number of positions in the portfolio, this section can be displayed on several pages.

21.6.1.13 Derivatives Allocation section

The Derivatives Allocation section is one of the valuation sections. It contains a valuation summary for positions classified as derivatives and is displayed using the following forms: a matrix by instrument type and currency classification; an allocation chart by instrument type; an allocation chart by currency; and the exchange rates table for the derivatives currencies.

This section is visible only if the portfolio holds derivatives positions; otherwise, it will be hidden.

21.6.1.14 Disclaimer section

The Disclaimer section displays a disclaimer retrieved from an external RTF file. The contents depend on the language used to generate the report. Content of the disclaimer can be displayed using two or more columns; currently, the content is displayed using two columns.

21.6.1.15 Fixed Income Allocation section

The Fixed Income Allocation section is one of the valuation sections. It contains a valuation summary for positions classified as fixed income with the following information displayed:

- On the first page, the following is shown:
 - a matrix by instrument type and currency classification
 - an allocation chart by instrument type
 - an allocation chart by currency classification
 - the exchange rates table for the fixed income currencies
- On the second page, the following is shown:
 - a matrix by rating and currency classification
 - an allocation chart by rating classification
 - an allocation chart by currency classification
 - the exchange rates table for the fixed income currencies
- On the third page, the following is shown:
 - a matrix by maturity class and currency classification
 - an allocation chart by maturity class
 - an allocation chart by currency classification
 - the exchange rates table for the fixed income currencies
- On the fourth page, the following is shown:
 - a matrix by duration class and currency classification
 - an allocation chart by duration class
 - an allocation chart by currency classification
 - the exchange rates table for the fixed income currencies.

Note that each matrix also contains modified duration information in addition to the standard market value and category weight.

This section is visible only if the portfolio holds fixed income positions; otherwise, it will be hidden.

21.6.1.16 Forwards Allocation section

The Forwards Allocation section is one of the valuation sections. It contains a valuation summary for positions classified as forwards with the following information displayed: a matrix by instrument type and currency classification; an allocation chart by instrument type; an allocation chart by currency classification; and the exchange rates table for the forwards currencies.

This section is visible only if the portfolio holds forward positions; otherwise, it will be hidden.

21.6.1.17 Funds Allocation section

The Funds Allocation section is one of the valuation sections. It contains a valuation summary for positions classified as funds with the following information displayed: a matrix by instrument type and currency classification; an allocation chart by instrument type; an allocation chart by currency classification; and the exchange rates table for the funds currencies.

This section is visible only if the portfolio holds funds positions; otherwise, it will be hidden.

21.6.1.18 Held Asset Detail section

The Held Asset Details section is one of the valuation sections. It displays the detailed list of positions drilled down from instrument to portfolio with specific information for each asset class. According to the number of positions in the portfolio, this section can be displayed on several pages.

21.6.1.19 Information page (with table of contents)

The Information page of the report shows certain global information on its left side such as the reporting date, client, portfolio scope, private client manager, and portfolio manager information. On its right side, the page displays the table of contents of the report.

If the report has been set to be generated anonymously using the report options (see section [Report Options section](#)), all client information, portfolio information, bank information, and managers' details disappear, leaving only the reporting date and the valuation currency.

21.6.1.20 Introduction section

The Introduction section displays an introductory comment retrieved from an external RTF file. The contents depend on the language used to generate the report.

21.6.1.21 Liquidity Allocation section

The Liquidity Allocation section is one of the valuation sections. It contains a valuation summary for positions classified as liquidity with the following information displayed: a matrix by instrument type and currency classification; an allocation chart by instrument type; an allocation chart by currency classification; and the exchange rates table for the liquidity currencies.

This section is visible only if the portfolio holds liquidity positions; otherwise, it will be hidden.

21.6.1.22 Liquidity Excess Portfolio section

The Liquidity Excess Portfolio section displays three different sub-sections. First, it displays two charts side-by-side that presents the portfolio distribution per currency and per level of liquidity ratio. The classification of liquidity ratio will be done by coding in the format element scripts to classify portfolios per 5% ranges above 70%. Then, it displays a table of portfolios sorted first by the best candidate for investment proposals according to their respective

liquidity ratio (i.e., those with highest liquidity ratio and highest market value). So, for two portfolios with the same liquidity ratio, the one with the highest market value will be displayed first.

21.6.1.23 Low Activity Client section

The Low Activity Client section displays information about clients with low activity and therefore, have portfolios that have been inactive for a certain period of time (currently, any consecutive 180 days). It displays two different sub-sections. First, it displays three charts side-by-side that present the client distribution by currencies, by countries of residence, and by client type. Each chart displays the client distribution as per criteria mentioned above. Then, it displays a table of clients sorted first by the days since last operation (in descending order), by highest market value, and by client name.

21.6.1.24 Market Value and P&L Summary section

The Market Value and P&L Summary section contains a valuation summary with a chart that presents the distribution of portfolios according to the categories mentioned below and a table for each category containing one line per portfolio.

- Portfolios with negative PL
- Portfolios with positive or null PL

According to the number of portfolios, this section can be displayed on several pages.

21.6.1.25 Market Value and P&L Details section

The Market Value and P&L Details section displays detailed information of positions for each portfolio presented in the tables in the Summary section defined by the categories mentioned (see section [Market Value and P&L Summary section](#)). According to the number of positions in the portfolio as well as the number of portfolios, this section can be displayed on several pages.

21.6.1.26 Money Market Allocation section

The Money Market Allocation section is one of the valuation sections. It contains a valuation summary for positions classified as money market with the following information displayed: a matrix by instrument type matrix and currency classification; an allocation chart by instrument type; an allocation chart by currency classification; and the exchange rates table for the money market currencies. Similar to the fixed income matrix, the money market matrix also contains modified duration information in addition to the standard market value and weight by category.

This section is visible only if the portfolio holds money market positions; otherwise, it will be hidden.

21.6.1.27 Operation History section

The Operation History section displays the list of operations during the selected period (Debit/Credit). The description of the operation is the concatenation of the operation nature, the quantity, the instrument, and the price.

21.6.1.28 Other Assets Allocation section

The Other Assets Allocation section is one of the valuation sections. It contains a valuation summary for positions not classified as previous assets with the following information displayed: a matrix by instrument type matrix and currency classification; an allocation chart by instrument type; an allocation chart by currency classification; and the exchange rates table for the "others" position currencies.

This section is visible only if the portfolio holds some unclassified positions; otherwise, it will be hidden.

21.6.1.29 Overview section

The Overview section provides a quick overview of the valuation and performance data. It displays in a single page an asset allocation overview including its representation in a bar chart, a performance overview of the period, and a chart representing the monthly performance of the period with an associated benchmark performance.

21.6.1.30 Performance Analysis section

The Performance Analysis section is one of the performance sections. It displays the performance analysis of the period, detailed by realised and unrealised performance of the capital and the currencies. It also shows the global effects and a performance history for 1, 3, and 5 years including the performance since inception, if available in the system. Finally, it displays a chart of monthly and cumulated performance of the portfolio compared to the benchmark.

21.6.1.31 Performance Attribution Summary section

The Performance Attribution Summary section is one of the performance sections. It displays summary information about performance attribution for each portfolio in the scope including their associated benchmarks, especially portfolio and benchmark performances, over performance, market selection, stock picking, and interaction effects.

21.6.1.32 Performance Attribution Details section

The Performance Attribution Details section is one of the performance sections. It displays detailed performance attribution information by market segments for each portfolio in the scope including their associated benchmark or benchmark linked at market segment level, especially performance, weight and contribution (portfolio/segment and benchmark) and over performance, market selection, stock picking, and interaction effects.

This section also displays a monthly chart for over-performance, market selection, stock picking, and interaction effects.

21.6.1.33 Performance Contribution Summary section

The Performance Contribution Summary section is one of the performance sections. It displays the performance contribution summary for each portfolio in the scope. It also displays the initial and final market values, the flows, the profits and losses, and the performance of each portfolio.

21.6.1.34 Performance Contribution Details section

The Performance Contribution Details section is one of the performance sections. It displays detailed performance contribution information by market segments with the possibility to drill down to the instrument level (see section [Report Blocks Selection section](#)). The section also displays detailed information for each portfolio in the scope.

21.6.1.35 Performance Deviation section

The Performance Deviation section displays information from pre-computed data showing portfolios that have their performances below a certain threshold. It is derived from the pre-defined query PCK_DS_PTF_QUERY_09, which queries portfolios that have their past 12 month's performance less than 6% for discretionary mandates and 12% for advisory mandates.

First, this section displays two charts that present the portfolio distribution per service type and the market value per service type. Then, it displays a table of portfolio list, sorted by the less efficient portfolio in terms of performance (i.e., less efficient portfolio performance, highest market value, and least benchmark performance) grouped by service type.

21.6.1.36 Proposal Client Candidate section

The Proposal Client Candidate section displays two different sub-sections. First, it displays two horizontal bar charts that present the client distribution by currency and by country of residence. Then, it displays a table of clients sorted by the number of days since the last proposal (in descending order).

21.6.1.37 Simple List of Positions section

The Simple List of Positions section displays a simple view of a list of positions with the very same information for each asset class. It is followed by the exchange rates of the available currencies. According to the number of positions of the portfolio, this section can be displayed on several pages.

21.6.1.38 Stocks Allocation section

The Stocks Allocation section is one of the valuation sections. It contains a valuation summary for positions classified as stocks with the following information displayed: a matrix by sector and currency classification; an allocation chart by sector; an allocation chart by currency classification; and the exchange rates table for stocks position currencies.

This section is visible only if the portfolio holds some stocks positions; otherwise, it will be hidden.

22 Report scheduling

This chapter explains how to use the Reporting scheduling function:

- [Overview](#)
- [Creating new report schedules](#)
- [Viewing and managing existing report schedules](#)
- [Security settings](#)

22.1 Overview

The Triple'A Plus standard packaging contains a default report profile that references online reports that can be launched by Portfolio Managers. Any report that is granted to Portfolio Managers via their report profile can be configured to generate according to specific configurations instead of immediately (with the exception of the Proposal Generator Report that needs its own dedicated process).

From the Triple'A Plus Web User Interface (WUI), the Portfolio Manager can specify the execution date and the frequency for generating reports. An internal scheduler will then generate the scheduled reports according to their specific configurations such as frequency of execution (e.g., daily, weekly, monthly, etc.), start validity date, time of execution, etc.

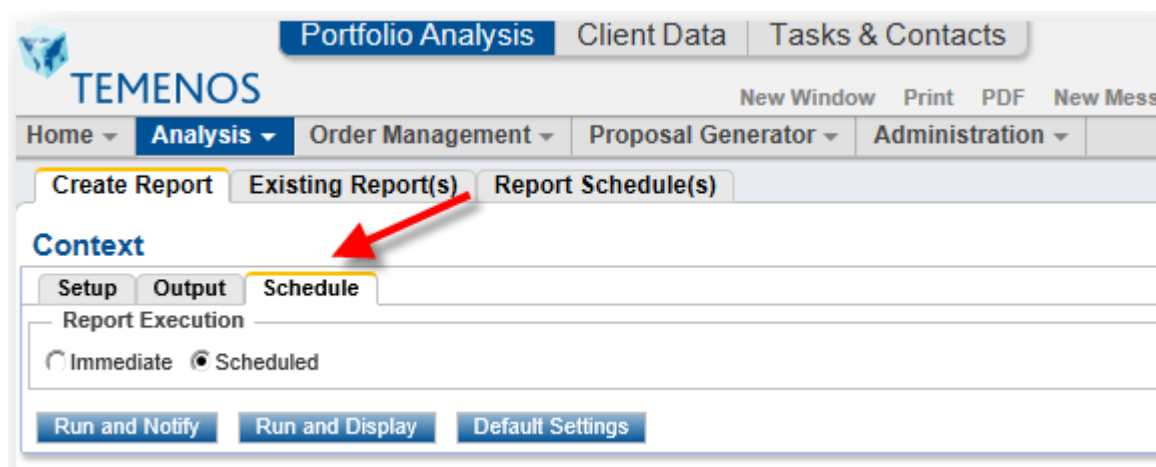

After the configurations are set, the report schedules will be stored in the repository and can be retrieved via the standard report search screen. Additionally, a notification will be sent to the creator of the schedule for each report execution.

22.2 Creating new report schedules

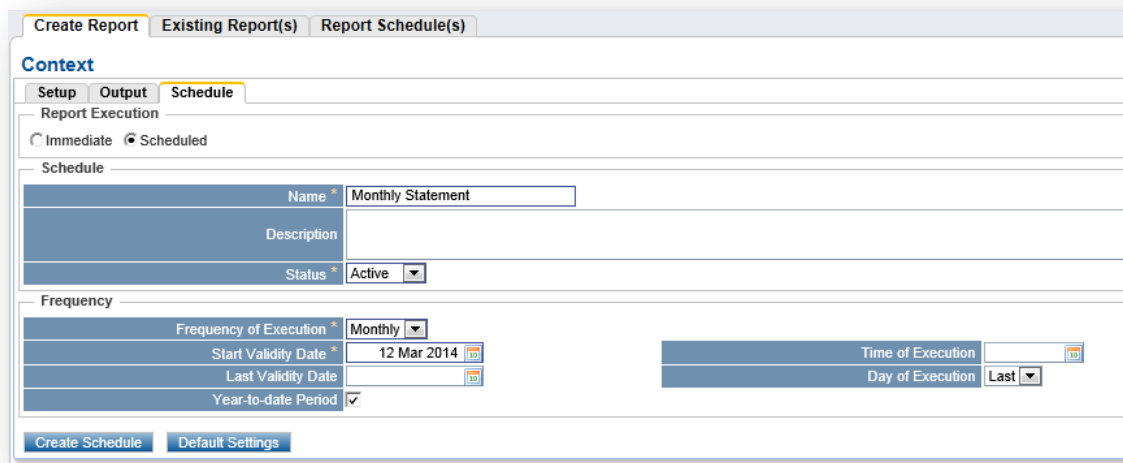

The Report scheduling functionalities is accessible via the standard report feature in the **Portfolio Analysis** menu.

To create a new report schedule:

1. Proceed exactly the same way as creating a new report. However, instead of clicking on one of the execution button (**Run and Notify** button or **Run and Display** button), select the **Schedule** tab and click on the **Scheduled** radio button.

Once a scheduled execution is selected, additional configuration will be available (e.g., frequency of execution, start validity date, time of execution, etc.):

- The **Schedule** section defines several options linked to general configuration. Complete the **Schedule** section as follows:

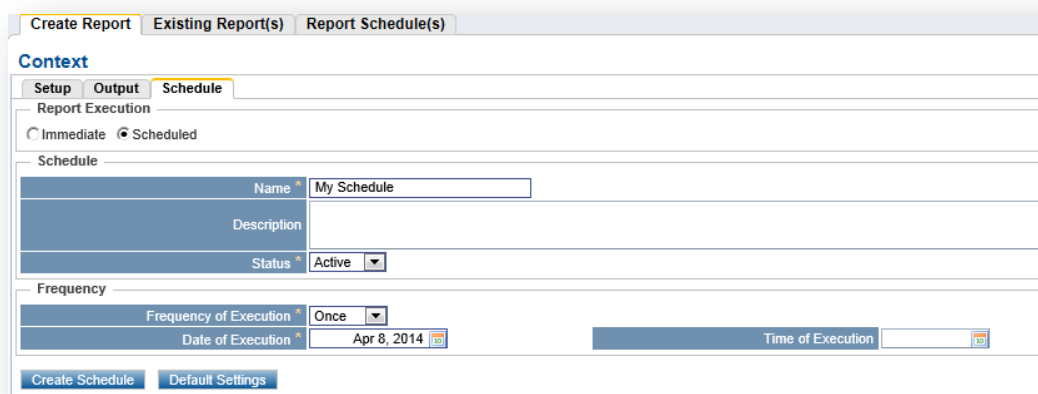

Field name	Action
Name	Provide a name for the report schedule that will permit, for example, faster and meaningful search. This is a mandatory field.
Description	Add text to define the purpose of the schedule or any additional information.
Status	From the drop-down menu, select the status of the schedule. When creating the schedule, two statuses are available: - Active - When a schedule is created as active, reports will be generated as per the configured parameters. - Inactive - When a schedule is created as inactive, it will be present in the database but no report will be generated. This is a way to temporarily disable the report generation without deleting the schedule configuration. Note that a third status exists, but cannot be selected by the end-user. This status is Expired and it represents schedules that have passed their last execution date defined by the user when creating the schedule. This is a mandatory field.

- The **Frequency** section defines several options linked to the recurrent aspect of reports generation. In the **Frequency of Execution** field, select one of the following:
 - [Once frequency](#)
 - [Daily frequency](#)
 - [Weekly frequency](#)
 - [Monthly frequency](#)
 - [Annual frequency](#)
- Click on the **Create Schedule** button to create a new report schedule.

If errors are raised (for example, technical errors or business errors defined in Triple'A Plus Core as input controls), messages are displayed on the screen. These errors must be resolved before the schedule creation can continue.

If no errors are raised, the report schedule is created in the database and one or more reports will be generated as per the schedule parameters. Once reports are generated, they can be retrieved using the standard reporting search screen and via the notification feature.

22.2.1 Once frequency

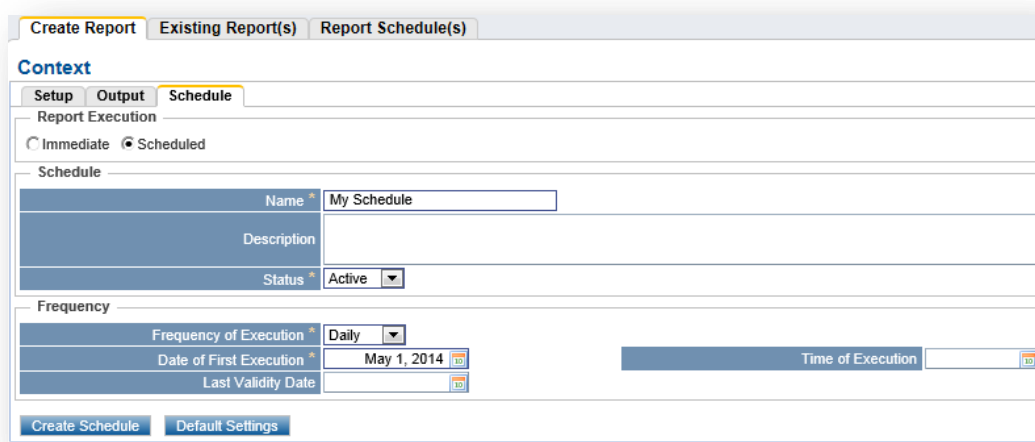

The following table explains the additional parameters to configure when the option "Once" is selected in the **Frequency of Execution** field:

Field name	Description
Frequency of Execution	Defines the frequency of execution. The option "Once" is used for a deferred and one-time report execution. This is a mandatory field.
Date of Execution	Defines the date on which the report execution must occur. It cannot be set in the past. This is a mandatory field.
Time of Execution	Defines the time in which the report execution must occur. It cannot be set in the past when the date of execution is set as the current day. If the time of execution is not specifically defined, the framework will generate the report at the time defined by the packaging parameter REP_BATCH_TIME.

After the report is executed for this type of schedule, its status will be automatically changed to **Expired** by the framework.

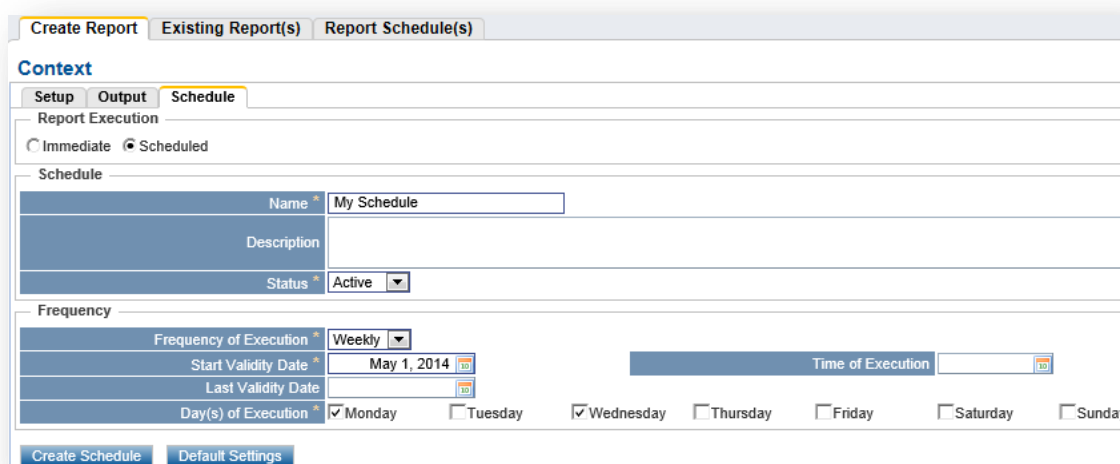

22.2.2 Daily frequency

The following table explains the additional parameters to configure when the option “Daily” is selected in the **Frequency of Execution** field:

Field name	Description
Frequency of Execution	Defines the frequency of execution. The option “Daily” is used for a deferred and daily executions. This is a mandatory field.
Date of First Execution	Defines the date on which the report execution will begin. This is a mandatory field.
Time of Execution	Defines the time on which the report execution must occur. If the time of execution is not specifically defined, the framework will generate the report at the time defined by the packaging parameter REP_BATCH_TIME.
Last Validity Date	Defines the last date of the schedule’s validity. The framework will generate a final report on this date and then, it will automatically change the schedule’s status to Expired , which disables the next day’s report execution. This date cannot be set before the Date of First Execution.

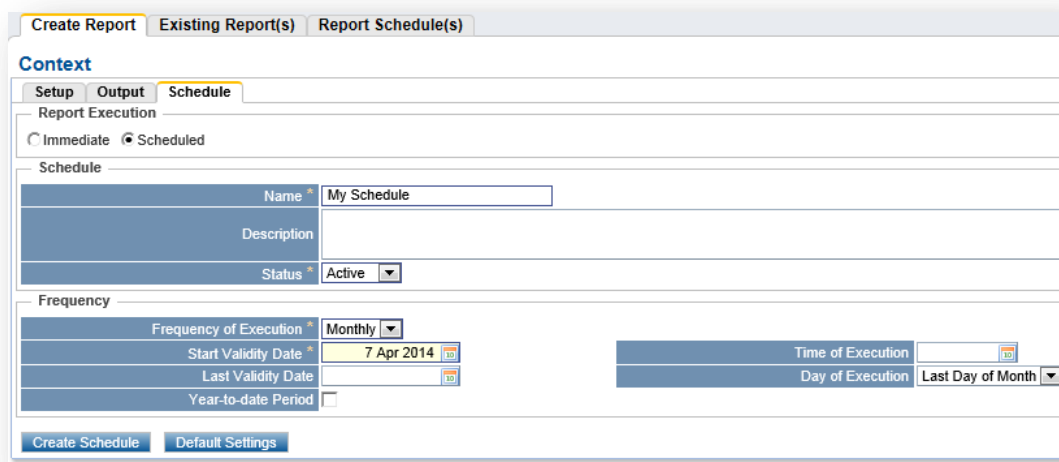

22.2.3 Weekly frequency

The following table explains the additional parameters to configure when the option “Weekly” is selected in the **Frequency of Execution** field:

Field name	Description
Frequency of Execution	Defines the frequency of execution. The option “Weekly” is used for deferred and weekly executions. This is a mandatory field.
Start Validity Date	Defines the start date of the schedule’s validity. Before this date, no report will be generated. Reaching this date, the framework can possibly begin to generate reports on a weekly basis (depending on other schedule parameters too). This is a mandatory field.
Time of Execution	Defines the time on which the report execution must occur. If the time of execution is not specifically defined, the framework will generate the report at the time defined by the packaging parameter REP_BATCH_TIME.
Last Validity Date	Defines the last date of the schedule’s validity. The framework will generate a final report on this date (if this generation coincides with a weekly execution) and then, it will automatically change the schedule’s status to Expired , which disables the next report execution based on the current report schedule. This date cannot be set before the Start Validity Date.
Day(s) of Execution	Defines on which day of the week the report execution must occur. More than one day can be selected, permitting bi-weekly execution for example. If you are selecting every day of the week, consider using a daily frequency instead of a weekly one. This is a mandatory field.

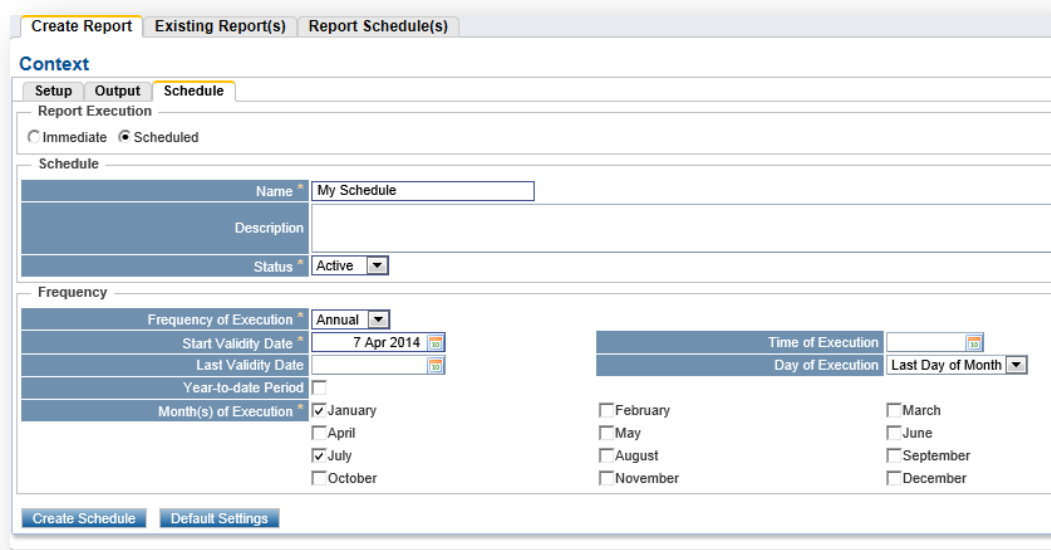

22.2.4 Monthly frequency

The following table explains the additional parameters to configure when the option “Monthly” is selected in the **Frequency of Execution** field:

Field name	Description
Frequency of Execution	Defines the frequency of execution. The option “Monthly” is used for a deferred and monthly executions. This is a mandatory field.
Start Validity Date	Defines the start date of the schedule’s validity. Before this date, no report will be generated. Reaching this date, the framework can possibly begin to generate reports on a monthly basis (depending on other schedule parameters too). This is a mandatory field.
Time of Execution	Defines the time on which the report execution must occur. If the time of execution is not specifically defined, the framework will generate the report at the time defined by the packaging parameter REP_BATCH_TIME.
Last Validity Date	Defines the last date of the schedule’s validity. The framework will generate a final report on this date (if this generation coincides with a monthly execution) and then, it will automatically change the schedule’s status to Expired , which disables the next report execution based on the current report schedule. This date cannot be set before the Start Validity Date.
Day of Execution	Defines on which day of the month the report execution must occur. Possible values are 1 to 30 and Last Day of the Month . If you select this last value, the framework will ensure a report is generated on the last day of the month. Note that selecting 30 will also generate a report on the 28 (or 29) of February.
Year-to-date Period	Lets you manage the domain dates using a year-to-date period instead of a fixed but moving period. For more information about domain dates management for report scheduling, refer to section Domain adjustment for recurrent .

22.2.5 Annual frequency

The following table explains the additional parameters to configure when the option “Annual” is selected in the **Frequency of Execution** field:

Field name	Description
Frequency of Execution	Defines the frequency of execution. The option “Annual” is used for a deferred and annual execution. This is a mandatory field.
Start Validity Date	Defines the start date of the schedule’s validity. Before this date, no report will be generated. Reaching this date, the framework can possibly begin to generate reports on an annual basis (depending on other schedule parameters too). This is a mandatory field.
Time of Execution	Defines the time on which the report execution must occur. If the time of execution is not specifically defined, the framework will generate the report at the time defined by the packaging parameter REP_BATCH_TIME.
Last Validity Date	Defines the last date of the schedule’s validity. The framework will generate a final report on this date (if this generation coincides with a monthly execution) and then, it will automatically change the schedule’s status to Expired , which disables the next report execution based on the current report schedule. This date cannot be set before the Start Validity Date.
Year-to-date Period	Lets you manage the domain dates using a year-to-date period instead of a fixed but moving period. For more information about domain dates management for report scheduling, refer to section Domain adjustment for recurrent .
Month(s) of Execution	Defines the months of the year on which the report execution must occur. More than one month can be selected, permitting bi-annual or quarterly execution for example. If you are selecting every month of the year, consider using a monthly frequency instead of an annual one. This is a mandatory field.

22.2.6 Domain adjustment for recurrent report schedule

When creating recurrent report schedule, it could be useful that some domain parameters are automatically adjusted to the next report execution. This is typically true for dates. For a monthly (frequency) report schedule, for example, it would be useful that the possible domain period is automatically adjusted either to the last month or to a year-to-date period up to the last month.

To illustrate this feature, the creation of a new monthly schedule, for example, should display year-to-date information. The following table will show you the correct domain period:

Creation / Execution	Initial date of the period	Final date of the period
Creation of the schedule	01.01.2014	31.01.2014
1st execution	01.01.2014	31.01.2014
2nd execution	01.01.2014	28.02.2014
3rd execution	01.01.2014	31.03.2014
...		
11th execution	01.01.2014	30.11.2014
12th execution	01.01.2014	31.12.2014
13th execution	01.01.2015	31.01.2015
14th execution	01.01.2015	28.02.2015
...		

The following table shows you the correct domain period but without the year-to-date feature activated:

Creation / Execution	Initial date of the period	Final date of the period
Creation of the schedule	01.01.2014	31.01.2014
1st execution	01.01.2014	31.01.2014
2nd execution	01.02.2014	28.02.2014
3rd execution	01.03.2014	31.03.2014
...		
11th execution	01.11.2014	30.11.2014
12th execution	01.12.2014	31.12.2014
13th execution	01.01.2015	31.01.2015
14th execution	01.02.2015	28.02.2015
...		

To ensure flexibility and customisability of these business rules, we have decided to compute them in the standard packaging via default values specific for report schedules. The rules use the following concepts:

- The domain dates (the ones from the report schedule creation domain) are copied into some additional attributes of the report schedule entity (ref_from_d, ref_till_d, ref_reference_d).
- The execution dates are computed using a delta (Δ) between the current execution date and the first execution date. This delta is added to each specific reference date (point 1).

By default, the following three domain dates will be adjusted according the schedule frequency and possibly the year-to-date flag: initial date (calc_from_d), final date (calc_till_d) and reference date (calc_ref_d).

The following table shows the standard default values applied when computing the domain of each report execution based on schedules for each available frequency (year-to-date computation):

Dates	Once	Daily	Weekly	Monthly	Annual
Initial date (calc_from_d)	Not applicable	Not applicable	Not applicable	ref_from_d +Δ years	ref_from_d +Δ years
Final date (calc_till_d)	Not applicable	Not applicable	Not applicable	ref_till_d +Δ months	ref_till_d +Δ months
Reference date (calc_ref_d)	Not applicable	Not applicable	Not applicable	ref_reference_d +Δ years	ref_reference_d +Δ years

And for non-year-to-date computations:

Dates	Once	Daily	Weekly	Monthly	Annual
Initial date (calc_from_d)	Unchanged	ref_from_d +Δ days	ref_from_d +Δ days	ref_from_d +Δ months	ref_from_d +Δ months
Final date (calc_till_d)	Unchanged	ref_till_d +Δ days	ref_till_d +Δ days	ref_till_d +Δ months	ref_till_d +Δ months
Reference date (calc_ref_d)	Unchanged	ref_reference_d +Δ days	ref_reference_d +Δ days	ref_reference_d +Δ months	ref_reference_d +Δ months

Note that as weekly and annual report schedules can define more than one execution (twice a week or twice a year, for example), the delta is still using days and months units.

To see examples of this implementation, refer to the default values on screen PCK_DS_DOMAIN_CONTEXT.

22.3 Viewing and managing existing report schedules

Existing report schedules are stored in the repository and can be retrieved via the standard report search screen. To access these report schedules from the Triple'A Plus Web User Interface (WUI), you can either:

- Create a report schedule.
 - Choose from menu **Portfolio Analysis > Analysis > Reporting > Create Report(s)**.
 - Select an Analysis scope.
 - Select **Scheduled** execution and enter the additional required parameters.
 - Click **Create Schedule** button. The application will automatically redirect existing report schedules onto the WUI pages.

or

- Choose from menu **Portfolio Analysis > Analysis > Reporting > Report Schedule(s)**. Using this menu option, the report schedule search screen is displayed and contains the **Active**, **Inactive**, **Expired** and **All** tabs.

Create Report Existing Report(s) **Report Schedule(s)**

Search Results

Actions	Name	Description	Report Name	Output Name
     	Function_Test1	Function_Test1	Client Statement	Client Statement-Portfolio-T_AI_AC_PTF2
     	Function_Test2	Function_Test2	Client Statement	Client Statement-Portfolio-T_AI_AC_PTF2
     	Test_20_1	Test_20_1	Client Statement	Client Statement-Portfolio-T_AI_11_REBALASYNC
     	Test_20_2	Test_20_2	Client Statement	Client Statement-Portfolio-T_AI_AC_PTF2
     	Delete_Test2	Delete_Test2	Client Statement	Client Statement-Portfolio-T_AI_AC_PTF2
     	Create_Test	Create_Test		
     	Restart_Schedule	Restart_Schedule		
     	SUE-ONCE-CLIENT STMT		Client Statement	Client Statement-Portfolio-T_AI_AC_PTF1
     	SUE-DAILY-CLIENT STMT		Client Statement	Client Statement-Portfolio-T_AI_AC_PTF1
     	SUE-WEEKLY-C STMT		Client Statement	Client Statement-Portfolio-T_AI_AC_PTF1

- The **Active** tab is displayed by default and shows only active report schedules that were created by the current user.
- The **Inactive** tab shows only inactive report schedules that were created by the current user.
- The **Expired** tab shows only expired schedules that were created by the current user. A schedule is considered as expired when it passed its last validity date or, only for a schedule set to be executed once, when a report has been generated.
- The **All** tab shows all schedules that users can see according to their data profile.

From the list of search results, the Action column provides several action icons for managing the report schedules:

- **Details** icon: Lets you view the initial domain and the additional schedule configuration of the selected report schedule.
- **Edit** icon: Lets you modify the initial domain and the additional schedule configuration of the selected report schedule.
- **Copy** icon: Lets you copy the initial domain and the additional schedule configuration into a brand new schedule. Using this option will open the report schedule creation page, which lets you modify some configurations before submitting the new schedule for creation in the database.
- **Delete** icon: Lets you delete a report schedule from the database. Any future report executions linked to the deleted report schedule will be cancelled.
- **Create Report** icon: Lets you instantly create a report based on the selected schedule configuration. Using this option will open the report creation page, which lets you modify some configurations before submitting the new report generation.
- **Reactivate** icon after technical issue (only available on the **Active** and **All** tabs): Lets you reactivate a report schedule after some technical issues have happened. This option has been implemented to cover a gap when issues occur during the generation of a report based on a schedule. For example, if for some reason the internal Triple'A Plus scheduler (Quartz) is inactive for a certain period of time and during that time, some

report schedules must produce reports, the generation cannot be processed. When the internal scheduler is then reactivated, the previously mentioned report schedules cannot produce the reports anymore as the generation time is now in the past and therefore, the internal scheduler will no longer take them into account. Using this **Reactivate** icon lets you manually force the current report schedule to generate the report immediately. Then, the framework will be able to compute the next valid generation date.

- **Reactivate** icon (only available on the **Inactive** and **All** tabs): Lets you quickly change the status of an inactive schedule so that it will be active again. However, note that the framework will try to change the status of the schedule and then, try to compute the next generation date. If the current configuration of the schedule is incompatible for a valid generation because, for example, the last validity date has passed, the schedule status will then be set to **Expired**.

Regarding the buttons on the screen, the **Refresh** button updates the information on the screen while the **New Report Schedule** button opens the report schedule creation screen.

22.4 Security settings

Report schedules and generated reports via the scheduler keep the same security feature as immediate reports. This security is based on the analysis scope of the report domain. For more information, refer to *Triple'A Plus Reporting Technical Guide*.

23 Single Order

This chapter covers the creation of orders in single mode for Securities (stock, fixed income, fund) and Derivatives (option, future), on Forex (Forex Spot Convention, Forex Spot Negotiated, Forex Forward Convention, Forex Forward Negotiated, Forex FX Swap Convention, Forex FX Swap Negotiated, account transfers on same currencies), Deposits (new call contracts, new term contracts), and Loans (new loan contract).

In the following sections, you will learn about:

- [Creating Security orders](#)
- [Creating Derivative orders](#)
- [Creating Forex orders](#)
- [Creating Deposit orders](#)
- [Creating Loan orders](#)
- [Pre-Trade Compliance Check](#)
- [Order Check screen](#)
- [Order View screen](#)

23.1 Creating Security orders

To create an order in single mode for a Security:

1. Select the **Portfolio Analysis** tab.
2. From the menu bar, go to **Order Management > Create Single Order > Security**.

The **Security Order Creation** screen is displayed. This screen allows you to enter buy and sell orders of the following types:

- Stock (the Triple'A Plus Core code type is PCK_DS_STOCK).
- Bond (the Triple'A Plus Core code type is PCK_DS_FIXED_INC).
- Fund (the Triple'A Plus Core code type is PCK_DS_FUND).

At the top of the screen, there is a summary description of the order. For example: "Client buys 10,000 BAYER AG 4.5% SNR MTN 23/05/1 (at market)".

3. Complete the following sections on the **Security Order Creation** screen:
 - a. In the Identification section, enter the portfolio, the instrument, and the nature of the order (buy or sell).
 - b. In the Instruction section, do the following:
 - i. Select Target Nature, where the available options are:
 - Quantity. The manager inputs a quantity in the **Target Objective** field, and the amount to invest will be automatically calculated.
 - Amount. The manager inputs the amount that must be invested in the **Target Amount** field, and the quantity will be automatically calculated.
 - In percentage of the portfolio market value. The manager inputs the desired percentage in the **Target Objective** field, and the amount and quantity will be automatically calculated. The current market value of the portfolio is found in an extended attribute extTdMktValPtfCurM.
 - ii. Enter the cash account and the market place.
 - c. In the Mode section, enter the order type (Market, Limit, Stop, Stop-Limit), the limit price, the stop price depending of the order type, the order validity nature and validity date, and the order price nature.

- d. In the Communication section, enter information relative to the initiator of the order (that is, whether the order is initiated by the client, or the manager is mandated by the client).
 - e. In the Trading section, enter information relative to the trading of the order (broker, deposit, etc.).
 - f. In the Booking section, enter specific instruction for the back office processing.
 - g. The Fees & Taxes section shows the fees and taxes computed using default values.
 - h. The Order Status section displays the status of the order; it shows the default status applied and the list of statuses permitted for the order. You can change the status of the order. The permitted statuses are:
 - Simulation – lets you create simulated orders.
 - To Validate – lets you send the order through a 4-eyes validation process managed via the function Order List, which provides a second validation before either rejecting the order or releasing it for execution.
 - To Send – lets you release the order for execution without the 4-eyes validation.
4. At the bottom of the screen, click one of the following action buttons:
- **Reset:** This action clears all screen data and reloads the **Security Order Creation** screen.
 - **Check:** This action calls Triple'A Plus Core input controls. The result of this action is one of the following:
 - No error: The Pre-Trade Compliance Check function is executed and the **Order Check** screen is displayed. Proceed to section [Pre-Trade Compliance Check](#) and to section [Order Check screen](#).
 - Only warnings: The **Security Order Creation** screen is reloaded with warning messages displayed at the top of the screen. Confirm the order by clicking the **Check** button again. The Pre-Trade Compliance Check function is executed and the **Order Check** screen is displayed. Proceed to section [Order Check screen](#).
 - Errors: The **Security Order Creation** screen is reloaded with error messages displayed at the top of the screen. You cannot force the error messages; you must address the errors (i.e., change the order characteristics) before you can continue.

23.2 Creating Derivative orders

To create an order in single mode for a Derivative:

1. Select the **Portfolio Analysis** tab.
2. From the menu bar, go to **Order Management > Create Single Order > Derivatives**.

The **Derivatives Order Creation** screen is displayed. This screen allows you to enter buy and sell orders of the following types:

- Option (the Triple'A Plus Core code type is PCK_DS_OPTION).
 - Future (the Triple'A Plus Core code type is PCK_DS_FUTURE).
3. The **Derivatives Order Creation** screen is composed of the same sections as the **Security Order Creation**. To complete the remaining steps to create a Derivatives order, see section [Creating Security orders](#) for more information.

23.3 Creating Forex orders

To create an order in single mode for a Forex:

1. Select the **Portfolio Analysis** tab.
2. From the menu bar, go to **Order Management > Create Single Order > Forex**.

The **Forex Order Creation** screen is displayed. This screen allows you to enter buy and sell orders of the following types:

- Forex Spot Convention (the Triple'A Plus Core code type is PCK_DS_FXSPOT_CONV). It covers non-negotiated Forex orders (convention rates).
- Forex Spot Negotiated (the Triple'A Plus Core code type is PCK_DS_FXSPOT_NEGO). It covers negotiated Forex orders (traded rates).
- Forex Forward Convention (the Triple'A Plus Core code type is PCK_DS_FXFWD_CONV). It covers non-negotiated Forex orders (convention rates).
- Forex Forward Negotiated (the Triple'A Plus Core code type is PCK_DS_FXFWD_NEGO). It covers negotiated Forex orders (traded rates).
- Forex FX Swap Convention (the Triple'A Plus Core code type is PCK_DS_FXSWP_CONV). It covers non-negotiated Forex Swap orders (convention rates).
- Forex FX Swap Negotiated (the Triple'A Plus Core code type is PCK_DS_FXSWP_NEGO). It covers negotiated Forex Swap orders (traded rates).
- Account Transfer same currency (the Triple'A Plus Core code type is PCK_DS_ACCT_SAME_CCY). It covers transfer from one account to another in the same currency (no currency Forex).

At the top of the screen, there is a summary description of the order.

3. Complete the following sections on the **Forex Order Creation** screen:
 - a. In the Identification section, enter the portfolio and the nature of the order (buy or sell) and then, select the type.
 - b. The Instruction section changes depending on the type of the order:
 - For an Account transfer of the same currency, enter the currency, the cash accounts, the amount, and the value date.
 - For a Forex Spot, enter the currencies, the cash accounts, the amount, and the value date.
 - For a Forex Forward, complete the same fields as the Forex Spot plus the contract length; the value date calculation is based on the operation date added of the contract length.
 - For a Forex FX Swap, complete the same fields as the Forex Forward plus the expiration date; the value date calculation is based on the operation date plus two business days and the expiration date calculation is based on the value date added of the contract length.
 - c. The Rate section changes depending on the type of the order. It supports the management of exchange rates and margins pips with a multiply or divide direction. Each time the direction is switched, the exchanges rates are recomputed and not inversed, and the margin pips are reset. Enter the client rate or the margin pips, if needed. For FX Swap orders, the computed spot quote rate can also be changed. This section is not displayed for an Account transfer in the same currency.
 - d. In the Communication section, enter information relative to the initiator of the order (that is, whether the order is initiated by the client or the manager is mandated by the client).

- e. In the Trading section, enter information relative to the trading of the order (e.g., trader, trader instruction, etc.).
 - f. The Fees & Taxes section shows the fees and taxes computed using default values.
 - g. The Order Status section displays the status of the order; it shows the default status applied and the list of statuses permitted for the order. You can change the status of the order. The permitted statuses are:
 - Simulation – lets you create simulated orders.
 - To Validate – lets you send the order through a 4-eyes validation process managed via the function Order List, which provides a second validation before either rejecting the order or releasing it for execution.
 - To Send – lets you release the order for execution without the 4-eyes validation.
4. At the bottom of the screen, click one of the following action buttons:
- **Reset:** This action clears all screen data and reloads the **Forex Order Creation** screen.
 - **Check:** This action calls Triple'A Plus Core input controls. The result of this action is one of the following:
 - No error: The Pre-Trade Compliance Check function is executed and the **Order Check** screen is displayed. Proceed to section [Pre-Trade Compliance Check](#) and to section [Order Check screen](#).
 - Only warnings: The **Forex Order Creation** screen is reloaded with warning messages displayed at the top of the screen. Confirm the order by clicking the **Check** button again. The Pre-Trade Compliance Check function is executed and the **Order Check** screen is displayed. Proceed to section [Order Check screen](#).
 - Errors: The **Forex Order Creation** screen is reloaded with error messages displayed at the top of the screen. You cannot force the error messages; you must address the errors (i.e., change the order characteristics) before you can continue.

23.4 Creating Deposit orders

To create an order in single mode for a Deposit:

1. Select the **Portfolio Analysis** tab.
2. From the menu bar, go to **Order Management > Create Single Order > Deposit**.

The **Deposit Order Creation** screen is displayed. This screen allows entering buy order on the following types:

- Call deposit (the Triple'A Plus Core code type is PCK_DS_CALL_DEP_NEW).
- Term deposit (the Triple'A Plus Core code type is PCK_DS_TERM_DEP_NEW).

At the top of the screen, there is a summary description of the order.

Note: Call deposit amendments (increase and decrease) are not allowed from the **Deposit Order Creation** screen. They are covered via initiate order.

3. Complete the following sections on the **Deposit Order Creation** screen:
 - a. In the Identification section, enter the portfolio and the contract type of the order (term deposit or call deposit).
 - b. The Instruction section changes depending of the nature of the order. Enter the currency, the cash account, the amount, the interest rate, etc.

- c. In the Communication section, enter information relative to the initiator of the order (that is, whether the order is initiated by the client, or the manager is mandated by the client).
 - d. In the Trading section, enter information relative to the trading of the order (trader, trader instruction etc.).
 - e. The Fees & Taxes section shows fees and taxes computed using default values.
 - f. The Order Status section displays the status of the order; it shows the default status applied and the list of statuses permitted for the order. You can change the status of the order. The permitted statuses are:
 - Simulation – lets you create simulated orders.
 - To Validate – lets you send the order through a 4-eyes validation process managed via the function Order List, which provides a second validation before either rejecting the order or releasing it for execution.
 - To Send – lets you release the order for execution without the 4-eyes validation.
4. At the bottom of the screen, click one of the following action buttons:
- **Reset:** This action clears all screen data and reloads the **Deposit Order Creation** screen.
 - **Check:** This action calls Triple'A Plus Core input controls. The result of this action is one of the following:
 - No error: The Pre-Trade Compliance Check function is executed and the **Order Check** screen is displayed. Proceed to section [Pre-Trade Compliance Check](#) and to section [Order Check screen](#).
 - Only warnings: The **Deposit Order Creation** screen is reloaded with warning messages displayed at the top of the screen. Confirm the order by clicking the **Check** button again. The Pre-Trade Compliance Check function is executed and the **Order Check** screen is displayed. Proceed to section [Order Check screen](#).
 - Errors: The **Deposit Order Creation** screen is reloaded with error messages displayed at the top of the screen. You cannot force the error messages; you must address the errors (i.e., change the order characteristics) before you can continue.

23.5 Creating Loan orders

To create an order in single mode for a Loan:

1. Select the **Portfolio Analysis** tab.
2. From the menu bar, go to **Order Management > Create Single Order > Loan**.

The **Loan Order Creation** screen is displayed. This screen allows you to enter sell orders of the following types:

- Loan (the Triple'A Plus Core code type is PCK_DS_LOAN).

At the top of the screen, there is a summary description of the order.

3. Complete the following sections on the **Loan Order Creation** screen:
 - In the Identification section, enter the portfolio and the value date of the order.
 - In the Instruction section, enter the cash account, the amount, the client rate and the length.

- In the Communication section, enter information relative to the initiator of the order (that is, whether the order is initiated by the client, or the manager is mandated by the client).
 - In the Trading section, enter information relative to the trading of the order (trader, trader instruction etc.).
 - The Order Status section displays the status of the order; it shows the default status applied and the list of statuses permitted for the order. You can change the status of the order. The permitted statuses are:
 - Simulation – lets you create simulated orders.
 - To Validate – lets you send the order through a 4-eyes validation process managed via the function Order List, which provides a second validation before either rejecting the order or releasing it for execution.
 - To Send – lets you release the order for execution without the 4-eyes validation.
4. At the bottom of the screen, click one of the following action buttons:
- **Save:** This action calls Triple'A Plus Core input controls. The result of this function is the following:
 - No error: A pop-up screen is displayed to the user to confirm the save. If the user confirms the action, the order is saved in the Triple'A Plus Core database and the **Order View** screen is displayed. Proceed to section [Order View screen](#).
 - Only warnings: The **Loan Order Creation** screen is reloaded with warning messages displayed at the top of the screen. Confirm the order by clicking the **Save** button again. Proceed to section [Order View screen](#).
 - Errors: The **Loan Order Creation** screen is reloaded with error messages displayed at the top of the screen. . You cannot force the error messages; you must address the errors (i.e., change the order characteristics) before you can save the order.
 - **Reset:** This action clears all screen data and reloads the **Loan Order Creation** screen.

23.6 Pre-Trade Compliance Check

Pre-Trade Compliance Check indicates the compliance of the portfolio's positions and orders according to the objectives of its investment strategy and to its investment constraints. Those indications are displayed as icons, depending on whether the Case Management function is activated. The Case Management function is activated if the system parameter `CASE_ACTIVATION_FLAG` is set to 1. See section [Compliance Checking](#) for a full description of these icons.

23.7 Order Check screen

The structure of the **Order Check** screen and the available actions are similar for all order types (e.g., Security orders, Deposit orders, etc). This screen has the following sections:

- **Warning Message** section: Warning input control messages are displayed at the top of the screen.
- **Compliance Cases per Portfolio** section: This module is only displayed if Case Management function is activated. The same module is used in Order Session. Proceed to section [Compliance tab](#).

- **Compliance Summary per Portfolio** section: This module displays the compliance summary and is similar to the one used in Order Session. Proceed to section [Compliance tab](#) (a subsection within section [Order Session](#)).
- **Order Screen** section: The content is the same as on the creation screen of the relevant order except that fields are not editable (they are in view mode).

At the bottom of the screen, the following action buttons are available:

- **Save:** This button is only displayed if the order has no cases of high criticalness and all cases needing clarification are clarified. A pop-up screen is displayed to confirm the save. If you confirm the action, the order is saved in the Triple'A Plus Core database and the **Order View** screen is displayed. Proceed to section [Order View screen](#).
- **Modify:** This action reloads the creation screen with the current data.
- **Cancel:** This action clears all screen data and reloads the creation screen of the relevant order.

23.8 Order View screen

The structure of the **Order View** screen and the available actions are similar for all order types. This screen is identical to the order creation screen (which is referenced throughout this chapter) of the relevant order, except that all fields are not editable and contains an extra module called Order Reference. In this module, items such as the code, status, creation date, and trade date of the order are displayed.

At the bottom of the screen, the following actions buttons are available:

- **New:** This action reinitiates a create screen of the relevant order.
- **Copy:** This action reinitiates a create screen with the same content as the current order.
- **Order List:** This action automatically redirects you to the **Order Lists > All Orders** screen with the portfolio reference of the current order automatically set in the context.

24 Initiate Order

The Initiate Order function increases or reduces current portfolio positions by initiating a set of buy and/or sell orders from valuation or held asset; or aligns manually a portfolio with its model by initiating a set of buy and/or sell orders from compliance check. It is possible to initiate single or multiple orders (into an order session) from the Valuation, Held Asset and Compliance Checking functions by selecting one or more positions or strategy elements.

The scope of this function covers:

- Security:
 - Stock: buy and sell
 - Fixed income: buy and sell
 - Fund: buy and sell
 - Option: buy open, buy close, sell open and sell close
 - Future: buy open, buy close, sell open and sell close
- Deposit:
 - Call deposit: contract amendments (increase, decrease).

For detailed information about the Initiate Order function, refer to the *Triple'A Plus Core User Guide*. For a list of the functions required for configuring the Initiate Order function in the WUI, refer to the *Triple'A Plus Web Packaging Guide*.

In this chapter, you will learn about:

- [Accessing the Initiating Orders function](#)
- [Initiate Order results](#)

24.1.1 Limitations

Initiate Order cannot be executed when the portfolio consolidation of the Context is set to "merged".

24.2 Accessing the Initiating Orders function

You can access the Initiate Order function in the following ways:

- [Initiating orders from valuation screen](#)
- [Initiating orders from compliance checking screen](#)
- [Initiating orders from held asset screen](#)

24.2.1 Initiating orders from valuation screen

1. From the **Valuation Result** screen (**List of Positions** section), select one or more positions by selecting as many checkboxes as required. Select the first checkbox to initiate buy orders, and the second one to initiate sell orders.
The selection of checkboxes is conditioned by the category Position (security or call deposit) and also by the user rights.
2. Click the **Initiate Order** button.

Orders are initiated with a quantity set to 0 for buy orders and with a quantity set to the initial position for sell orders.

24.2.2 Initiating orders from compliance checking screen

1. From the compliance check result screen (**Compliance Details per Portfolio Module** section, **Objectives Compliance** tab), select one or more strategy elements by selecting as many checkboxes as required. Select the first checkbox to initiate buy orders, and the second one to initiate sell orders.
The selection of checkbox is conditioned by the category Strategy Element (security or call deposit), its deviation against the objective, and also by the user rights.
2. Click the **Initiate Order** button.

Orders are initiated with a quantity to reach the initial strategy element objective for both buy and sell orders.

24.2.3 Initiating orders from held asset screen

1. From the Held Asset Result screen (List of Positions section), select one or more positions by selecting as many checkboxes as required. Select the first checkbox to initiate buy orders, and the second one to initiate sell orders.
The selection of checkbox is conditioned by the category Position (security or call deposit), its deviation against the objective, and also by the user rights.
2. Click the **Initiate Order** button.

Orders are initiated with a quantity set to 0 for buy orders and with a quantity set to the initial position for sell orders.

24.3 Initiate Order results

The result of the Initiate Order function is a set of buy/sell orders into an order session. For more details on Order Sessions, see section [Order Session](#).

If the Initiate Order function is launched on a single order, the system displays the relevant creation screen (see section [Single Order](#)).

25 Allocate Order

The Allocate Order function automatically generates a set of buy and/or sell orders into an order session to comply with allocation rules. For detailed information about the Allocate Order function, refer to the *Triple'A Plus Core User Guide* and *Triple'A Plus Core Orders And Productivity Guide*. For a list of the functions required for configuring the Allocate Order function in the WUI, refer to the *Triple'A Plus Web Reference Packaging Guide*.

In this chapter, you will learn about:

- [Accessing the Allocate Order function](#)
- [Using the Context section](#)
- [Allocate Order results](#)

25.1 Accessing the Allocate Order function

To access the Allocate Order function:

1. Select the **Portfolio Analysis** tab.
2. From the menu bar, go to **Order Management > Allocate Order**.

25.2 Using the Context section

To specify the order allocation to be performed, use the **Context** section of the Allocate Order work area. The Allocate Order **Context** is particular in the sense that it is a pageflow with the ability to define order allocations. For this, the context is divided into the following parts:

- [Context parameters](#)
 - [Defining allocation rule](#)
 - [List of allocation rules](#)
1. Complete the fields in the **Context** section (see section [Context parameters](#)).
 2. Click **Apply** button and a new window is displayed with a new form to let you begin defining the allocation rule. Note that the **Analysis Scope** and **Allocation Method** fields are displayed again but are no longer editable, and the **Apply** button has been replaced with the **Execute** button. The new form that is displayed is dependent on the option that you selected in the Allocation Method field.
 3. To continue defining the allocation rule, see section [Defining allocation rules](#).

25.2.1 Context parameters

Complete the fields in the **Context** section as follows:

Item	Selection	Description
Analysis Scope	All Portfolio Client Manager Advisor Portfolio List Query	Determines the portfolio or set of portfolios to be included in the allocate order. The default value is Portfolio.

Item	Selection	Description
Allocation Method	Global Order Qty. Instr. Order Qty. Instr. Res. Qty. Instr. Order % of Ptf. Instr. Res. % of Ptf. MktSgt. Res. % of Ptf. Switch Instr. Cash Res. % of Ptf. Ptf. Order Qty. Ptf. Res. Qty. Conversion Arbitrage Combined Buy/Sell Instr. Resulting of Mkt. Sgt. Instr. Res. % of Strat. Mkt. Sgt.	Set this option to define which allocation rule you want to use to generate orders. The default value is Instrument Resulting % of Portfolio. For more information about allocation methods, refer to the <i>Triple'A Plus Core Orders And Productivity Guide</i> .
Qty. Alloc. Nat.	Default Pro Rata of MV Pro Rata of Qty Equal %	Set the quantity allocation nature that will be used to generate orders. Note: This option is displayed only if you selected Global Order Qty as the allocation method.
Obj. Weight	<objective weight> +/- <margin>	Define the global objective weight and the percentage margin to apply. Note: This option is only available for "MktSgt. Res. % of Ptf.", "Cash Res. % of Ptf.", and "Instr. Resulting of Mkt. Sgt."
Session Description	<free text>	Provide a description that will be attached to the generated order session.
Market Segment	<market segment code>	Specify the market segment. Note: This option is only available for "MktSgt. Res. % of Ptf.", "Instr. Resulting of Mkt. Sgt.", and "Instr. Res. % of Strat. Mkt. Sgt."
Recommendation List	<recommendation list>	Provide a recommendation list to automatically load allocation rules instead of manually entering them.
Min Status	<all statuses from Expired through to Post Accounted>	Select the minimum status of the retrieved positions. The default value is Received.
Max Status	<all statuses from the Min Status through to Post Accounted>	Select the maximum status of the retrieved positions. The default value is Accounted.
Gen. Global Order	No for "No Global Order". Yes for "Gen. Global Orders".	Set this option to specify whether you want to generate a global order in the resulting order session. It will group generated orders.
Minimum Order Amount	<amount> <currency code>	Define a minimum order amount. If the amount entered is below this minimum order amount, orders will not be generated by the system. You must define an amount and a corresponding currency. Note: This option is displayed for all allocation methods except "Global Order Qty."

Item	Selection	Description
Minimum Order Percent	<percent>	Define a minimum order percentage. If the percentage entered is below this minimum order percentage, orders will not be generated by the system. Note: This option is displayed for all allocation methods except "Global Order Qty."

Note: *Analysis Scope* and *Allocation Method* are mandatory fields if you want to create allocation rules.

25.2.2 Defining allocation rules

- After choosing the allocation method and completing other fields in the **Context**, complete the fields of the new form that is displayed to create the allocation rule. The form that is displayed is dependent on the option that you selected in the **Allocation Method** field. (For more information about the fields of the form to complete for the selected allocation method, refer to the subsections below this section).
- Click one of the following buttons:
 - Create:** This action calls the Triple'A Plus Core input controls. The result of this function is the following:
 - No error: The allocation rule is saved. The context screen is updated to show the list of allocation rules in the **List of Allocation Rules** section.
 - Only warnings: The screen is reloaded with warning messages displayed at the top of the screen. Confirm the order by clicking the **Create** button again. The context screen is updated to show the list of allocation rules in the **List of Allocation Rules** section.
 - Errors: The screen is reloaded with error messages displayed at the top of the screen. You cannot force the error messages; you must address the errors (i.e., change the order characteristics) before you can continue to save the new order allocation.
 - Cancel:** This action clears the data and reloads the screen.
- Once you have one allocation rule that is saved, the **List of Allocation Rules** section (see section [List of allocation rules](#)) will display all saved allocation rules. Create as many allocation rules needed before clicking the **Execute** button, which will perform the allocate order execution.

25.2.2.1 Global Order Quantity allocation rule

For a Global Order Quantity allocation rule, specify the:

- instrument
- operation nature (Buy or Sell)
- quantity
- objective weight
- order type
- target nature (Quantity or Amount)
- eventually, the maximum weight contribution, limit, stop, and validity date

25.2.2.2 Instrument Order Quantity allocation rule

For an Instrument Order Quantity allocation rule, specify the:

- instrument

- operation nature (Buy or Sell)
- quantity
- objective weight
- order type
- target nature (Quantity or Amount)
- eventually, the limit, stop, and validity date

25.2.2.3 Instrument Resulting Quantity allocation rule

For an Instrument Resulting Quantity allocation rule, specify the:

- instrument to buy/sell
- resulting quantity
- order type
- target nature (Quantity or Amount)
- eventually, the limit, stop, and validity date

25.2.2.4 Instrument Order % of Portfolio allocation rule

For an Instrument Order % of Portfolio allocation rule, specify the:

- instrument
- operation nature (Buy or Sell)
- objective weight in percentage
- order type
- target nature (Quantity or Amount)
- Eventually, the margin (in %), limit, stop, and validity date

25.2.2.5 Instrument Resulting % of Portfolio allocation rule

For an Instrument Resulting % of Portfolio allocation rule, specify the:

- instrument
- objective weight in percentage
- order type
- target nature (Quantity or Amount)
- eventually, the margin (in %), limit, stop, and validity date

25.2.2.6 Market Segment Resulting % of Portfolio allocation rule

For a Market Segment Resulting % of Portfolio allocation rule, specify the:

- instrument
- recommendation nature (Buy, Sell or Neutral)
- order type
- target nature (Quantity or Amount)
- eventually, the maximum weight (in %), limit, stop, and validity date

25.2.2.7 Switch Instrument allocation rule

For a Switch, define at least two allocation rules: one for the sell leg and another for the buy leg:

- Sell leg:
 - instrument to sell
 - % of position to sell
 - target nature (Quantity or Amount)

- order type and eventually the limit, stop, and validity
- Buy leg:
 - instrument to buy
 - maximum % weight to buy related to the portfolio total market value
 - target nature (Quantity or Amount)
 - order type and eventually the limit, stop, and validity

25.2.2.8 Cash Resulting % of Portfolio allocation rule

For a Cash Resulting % of Portfolio allocation rule, define it the same way as the Market Segment Resulting % of Portfolio allocation rule (see section [Market Segment Resulting % of Portfolio](#)).

25.2.2.9 Portfolio Order Quantity allocation rule

For a Portfolio Order Quantity allocation rule, specify the:

- portfolio
- instrument
- operation nature (Buy or Sell)
- quantity
- order type
- target nature (Quantity or Amount)
- eventually, the maximum weight (in %), the limit, stop, and validity date

25.2.2.10 Portfolio Resulting Quantity allocation rule

For a Portfolio Resulting Quantity allocation rule, specify the:

- portfolio
- instrument
- resulting quantity
- order type
- target nature (Quantity or Amount)
- eventually, the maximum weight (in %), the limit, stop, and validity date

25.2.2.11 Conversion allocation rule

For a Conversion allocation rule, specify a sell allocation rule and a buy allocation rule with the following characteristics:

- instrument
- objective weight in percentage
- order type
- target nature (Quantity or Amount)
- eventually, the maximum weight (in %), the limit, stop, and validity date

25.2.2.12 Arbitrage allocation rule

For an Arbitrage allocation rule, define it the same way as the Conversion allocation rule (see section [Conversion](#)).

25.2.2.13 Combined Buy/Sell allocation rule

For a Combined Sell/Buy allocation rule, specify:

- instrument
- operation nature (Buy or Sell)

- objective weight
- order type
- target nature (Quantity or Amount)
- eventually, the limit, stop, and validity date

25.2.2.14 Instrument Resulting of Market Segment allocation rule

For an Instrument Resulting of Market Segment allocation rule, define it the same way as the Combined Buy/Sell allocation rule (see section [Combined Buy/Sell](#)).

25.2.2.15 Instrument Resulting % of Strategy Market Segment allocation rule

For an Instrument Resulting % of Strategy Market Segment allocation rule, specify the:

- instrument
- operation nature (Buy or Sell)
- maximum objective weight
- order type
- target nature (Quantity or Amount)
- eventually, the limit, stop, and validity date

25.2.3 List of allocation rules

The **List of Allocation Rules** section on the context screen is displayed in a table format and provides information and available actions on the allocation rules that you created. Using the first two columns of the table, you can update or delete an allocation rule. Other columns display all details of the allocation rule with access to the Instrument Details in a separate window.

25.3 Allocate Order results

The result of the Allocate Order function is a set of buy/sell orders in an order session. For more details on Order Sessions, see section [Order Session](#).

26 Rebalancing

The Rebalancing function generates automatically a set of buy and/or sell orders into an order session to align portfolios with their investment profile.

For detailed information about the Rebalancing function, see *Triple'A Plus Core User Guide*. For a list of the functions required for configuring the Rebalancing function in the WUI, see *Triple'A Plus Web Packaging Guide*.

In this chapter, you will learn about:

- [Accessing the Rebalancing function](#)
- [Using the Context section](#)
- [Rebalancing results](#)

26.1 Accessing the Rebalancing function

To access the **Rebalancing** function:

1. Select the **Portfolio Analysis** tab.
2. From the menu bar, go to **Order Management > Rebalancing**.

26.2 Using the Context section

To specify the nature of the Rebalancing to be performed, use the **Context** section (see section [Context parameters](#)) of the Rebalancing work area.

26.2.1 Context parameters

1. Complete the fields in the **Context** section as follows:

Item	Selection	Description
Analysis Scope	All Portfolio Client Manager Advisor Portfolio List Query	Determines the portfolio or set of portfolios to be included in the rebalancing. The default value is Portfolio.
Instrument Set	All Instrument	This option can restrict the rebalancing to an instrument or set of instruments. The default value is All.
Minimum Order Amount	<amount> <currency code>	Define a minimum order amount. If the amount entered is below this minimum order amount, orders will not be generated by the system. You must define an amount and a corresponding currency.
Minimum Order Percent	<percent>	Define a minimum order percent: below this percent, orders will not be generated by the system.
Session Description	<free text>	Define a description that will be attached to the generated order session.

Item	Selection	Description
Min Status	<all statuses from Expired through to Post Accounted>	Select the minimum status of the retrieved positions. The default value is Received.
Max Status	<all statuses from the Min Status through to Post Accounted>	Select the maximum status of the retrieved positions. The default value is Accounted.
Gen. Global Order	No for "No Global Order" Yes for "Gen. Global Orders"	Set this option to specify whether you want to generate a global order in the resulting order session. It will group generated orders.

2. Click **Execute** to perform the rebalancing execution.

26.3 Rebalancing results

The result of the Rebalancing function is a set of buy/sell orders into an order session. For more details on Order Sessions, see section [Order Session](#).

27 Order Session

An order session is a set of orders contained within the same Triple'A Plus Core function result. The set of orders is managed collectively; that is, related processes are executed on the whole set of orders (compliance check, publishing, etc.). In Triple'A Plus Web, the set of orders can come from the Order Allocation, Rebalancing, Initiate Order, Proposal Generator, and Order Entry functions; see related sections in this guide. This section describes the management of order sessions and the management of orders inside the session.

In this chapter, you will learn about:

- [Accessing the Order Session function](#)
- [Using the Order Session work area](#)
- [Session statuses](#)
- [Packaged workflows](#)
- [Session search](#)

27.1 Accessing the Order Session function

To access the Order Session function:

1. Select the **Portfolio Analysis** tab.
2. From the menu bar, go to one of the following:
 - **Order Management > Order Session > Create Session.**
Select this option to create a new session (order entry).
 - **Order Management > Order Session > Existing Session(s).**
Select this option to search and load existing sessions.

27.2 Using the Order Session work area

This section provides information about the main work area for Order Session and contains the following sections:

- [Order Session section](#)
- [Order tab](#)
- [Compliance tab](#)

27.2.1 Order Session section

Regardless of whether you are creating a new session or loaded an existing session, the top of the main work area contains a section called **Order Session**. It contains:

- Information about session characteristics, such as session origin, creation date, creation user, status, description and code.
- Action buttons, such as **Check Session**, **Send Session for Validation**, **Release Session for Trading**, **Reject Session** and **Recycle Sessions**. The presence of these buttons depends on the session status and on whether the session is in error or not (see section [Order session workflow for initiate order and order entry](#)).

27.2.2 Order tab

The **Order** tab contains the following sections:

- **Summary** section, which presents in the form of a matrix the numbers of orders in function of the category Order.
- **Detailed List of Orders** section, which is a collection of horizontally tabbed views detailing the orders in the session. The tabs are based on asset class and are dynamic; that is, if no positions exist for a particular asset class then that tab will not be displayed. These tabs contain icons and sets of buttons to manage orders inside the session. These buttons are only displayed if the session status is **Working** or **Checked**, and if the session has been loaded in modify mode.

27.2.2.1 Creating orders using quick order screen

In the **Create Order** box, you can click on one of the buttons (**Security**, **Derivative**, **Forex**, **Deposit**, and **Loan**) to start the creation of an order. After a button is clicked on, a pop-up window is displayed where you can enter information into a few fields before saving the information. If you want to access the full-order screen, select the **detailed** radio button at the top of the window. Full-order screens are the same as those used in single order screens (for more information, see [Creating Security orders](#)).

Security orders can be captured by selecting Target Nature, where the available options are:

- Quantity. The manager inputs a quantity in the **Target Objective** field, and the amount to invest will be automatically calculated.
- Amount. The manager inputs the amount that must be invested in the **Target Amount** field, and the quantity will be automatically calculated.
- In percentage of the portfolio market value. As a percentage of the portfolio market value, the manager inputs the desired percentage in the **Target Objective** field, and the amount and quantity will be automatically calculated. The current market value of the portfolio is found in an extended attribute extTdMktValPtCurM.

After saving the information, the created order is displayed. If you want to create another new order, click the **New** button and a copy of the previous order is created (except for the quantity). Alternatively, you can go back to the session by clicking on the **Back to Session** button.

27.2.2.2 Creating orders using the Copy icon

Click on the **Copy** icon to create a new order that is an exact copy of the selected order.

27.2.2.3 Modifying orders using the Modify icon

Click on the **Modify** icon to modify the selected order in the full-edition screen.

27.2.2.4 Viewing orders using the View icon

Click on the **View** icon to view the selected order in a full-detailed screen.

27.2.2.5 Deleting multiple orders

To delete multiple orders, first select the orders by checking their checkboxes in the **Select** column, and then click the **Delete Order** button.

27.2.2.6 Modifying values displayed in the cells of the orders table

To modify the values in editable cells, click on the **Edit button** in the **Table Edition** box. The definition of an editable cell must be defined at design time.

Note: There are limitations when modifying online cells. When the table is in Update Mode, there is no "online" computing of default values and filters. For example, if you modify the currency of the transaction, the cash account does not change and the filter on the cash account still shows the previous currency. Furthermore, while in Update Mode, you can only edit cells of the current screen. All navigation buttons (e.g., next screen, sort, filter) are disabled. The process that updates in block mode the orders of the current screen of the

editable table calls the Default Values of these orders before updating the Triple'A Plus Core database but does not compute the Input Controls of these orders.

27.2.2.7 Grouping orders and managing block orders

Select the orders by checking the checkboxes of the desired orders in the Select column. Then, to group the orders by generating a block order, click on the **Group Order** button.

You can detach child orders from the block order by checking the checkboxes of the child orders in the Select column and then, clicking on the **Detach Order** button. If you selected a block order, all child orders of the block order are detached and the block order is removed.

This feature is only available for orders that are included in the category Security / Derivative & Other.

27.2.2.8 Marking orders that are not permitted for grouping

This feature is only available for single orders.

You can define orders that are not permitted for grouping by changing the value in the No Grouping column to No Grouping.

27.2.3 Compliance tab

The **Compliance** tab contains a **Compliance Cases per Portfolio** section, a **Compliance Summary per Portfolio** section, and a **Sanity Checks per Order** section.

The **Compliance Cases per Portfolio** module is only displayed if Case Management function is activated. This section displays a list of cases generated by executing the Pre-Trade Check Strategy function. Each row in the table in this section has checkbox and icons that allow the following actions:

- Use the **Select** checkbox to select one or multiple cases. Selection is conditioned to the status of the cases: only cases with a severity that requires clarification are selectable.
- Click the **Details** icon to view the clarification linked to the case.
- Click the **Edit** icon to update the clarification linked to the case.

Click the **Clarify Cases** button below the table to launch a new screen that allows the creation of a clarification linked to the cases that have been selected. This **Clarify Cases** button is disabled if one case has the status "Cannot be clarified". To remove these blocking cases, you must modify orders and then check the session again.

For information about the **Compliance Summary per Portfolio** section, see section [Compliance Checking](#).

The **Sanity Checks per Order** section displays a list of cases generated by executing the Verify Session Input Control function. One case per input control message is created, as well as one summary message. Each row in the table in this section has icons that allow the following actions:

- Click the **Details** icon to view the order linked to the case.
- Click the **Edit** icon to modify the order linked to the case.
- Click the **Delete** icon to delete the order linked to the case.

Icons are secured and depend on the user rights.

27.3 Session statuses

The session workflow is managed via session statuses, described in the following table:

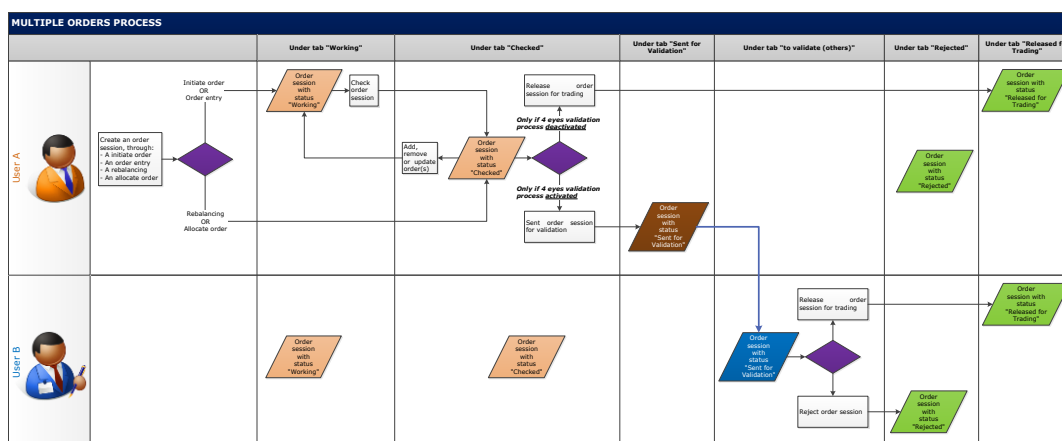

Status	Value	Description
Cancelled	10	Session cancelled: not applicable for order sessions, only used for order proposals.
Generation running	15	Allocate order or rebalancing session launched by asynchronous mechanism with order generation running.
Generation failed	16	Allocate order or rebalancing session launched by asynchronous mechanism with order generation failed.
Working	20	Session in working mode.
Check running	25	Pre-trade compliance and sanity check on session launched by asynchronous mechanism with compliance results running.
Check failed	26	Pre-trade compliance and sanity check on session launched by asynchronous mechanism with compliance results failed.
Checked	30	Session in working mode with pre-trade compliance and sanity check completed.
Sent for Validation	40	Session that needs a 4-eyes validation process that is ready for validation. For information about the activation of the 4-eyes validation process, refer to the <i>Triple'A Plus Web Packaging Reference Guide</i> .
Rejected	50	Session that needed a 4-eyes validation process that has been rejected. For information about the activation of the 4-eyes validation process, refer to the <i>Triple'A Plus Web Packaging Reference Guide</i> .
Released for Trading running	65	Session publishing launched by asynchronous mechanism with publishing running.
Released for Trading failed	66	Session publishing launched by asynchronous mechanism with publishing failed.
Released for Trading	70	Session published.

27.4 Packaged workflows

This section provides information about the packaged session workflows:

- [Order session workflow for initiate order and order entry](#)
- [Order session workflow for rebalancing and allocate order](#)

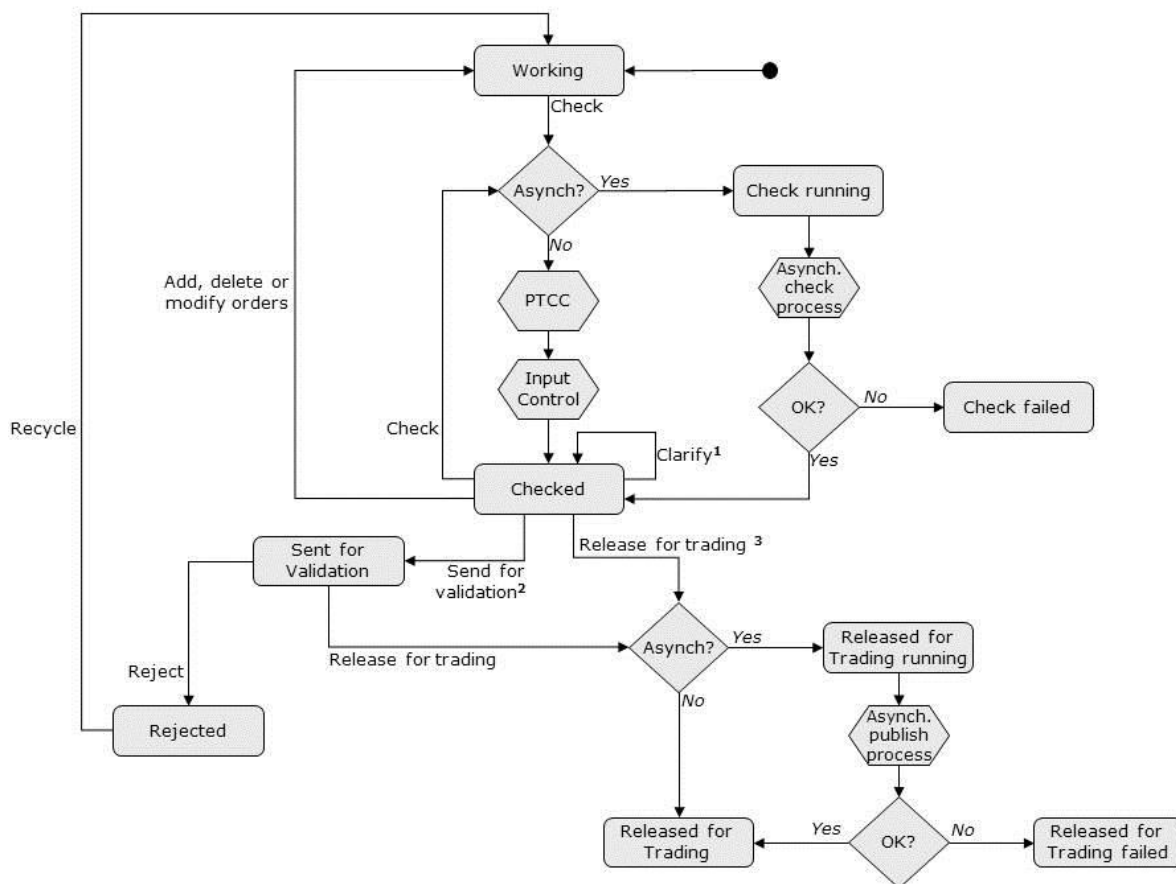

These workflows can be configured to either include or not include a 4-eyes validation process. The following diagram shows the different situations:

For information about the activation of the 4-eyes validation process, refer to the *Triple'A Plus Web Packaging Reference Guide*.

27.4.1 Order session workflow for initiate order and order entry

The following diagram shows the workflow for an order session created from an initiate order or an order entry. Note that some actions depend whether the session must go through a 4-eyes validation process or not.

Order session workflow from Initiate Order / Order Entry

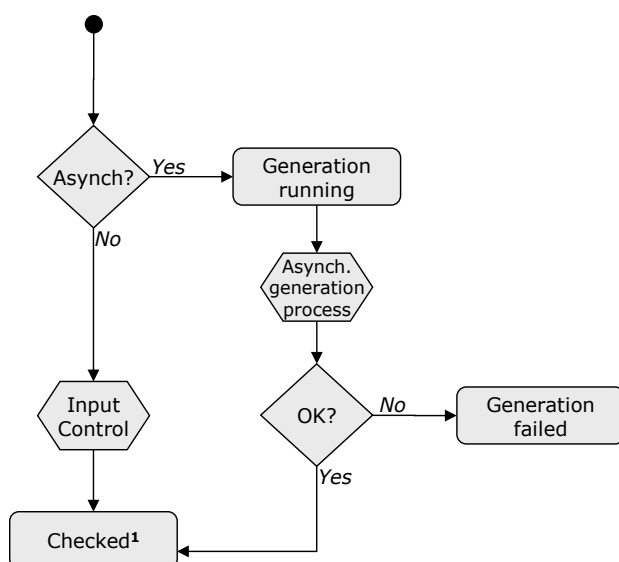

Diagram notes:

1. "Clarify" is only accessible if the checked session has no cases of high criticalness.
2. "Send for validation" is only accessible if the checked session is cleared to go (no cases of high criticalness and all cases needing clarification are clarified) and if the session requires a 4-eyes validation process.
3. "Release Session for Trading" is only accessible if the checked session is cleared to go (no cases of high criticalness and all cases needing clarification are clarified) and if the session does not require a 4-eyes validation process.

For information about asynchronous mechanisms and activation of the 4-eyes validation process, refer to the *Triple'A Plus Web Packaging Reference Guide*.

27.4.2 Order session workflow for rebalancing and allocate order

The following diagram shows the workflow for an order session created from a rebalancing or an allocate order.

Order session workflow from Rebalancing / Allocate Order

Diagram notes:

¹ From the status "Checked", the same workflow as order entry / initiate order applies.

No pre-trade compliance check (PTCC) is necessary for rebalancing or allocate order. For rebalancing, the PTCC is "embedded" in the function. For allocate order, the domain user-defined screen PCK_DS_DOMAIN_CONTEXT is used to force the value `check_strat_e` to 1 (Check Strategies) to run a PTCC.

For information about asynchronous mechanisms and activation of the 4-eyes validation process, refer to the *Triple'A Plus Web Packaging Reference Guide*.

27.5 Session search

This section provides information about session search, and contains the following subsections:

- [Security](#)
- [Search criteria](#)

- [Search output](#)

27.5.1 Security

The security applied on searching sessions is based on the standard Triple'A Plus Core security features (Data Security Profile and Data Profile).

The access to a session and its right to update/delete are calculated online.

The related action availability is as follows:

Action	Description
View a session	Order session's Data Security Profile is contained on the user's Data Profile composition.
Modify a session	Order session's Data Security Profile is contained on the user's Data Profile composition with its update flag (auth_update_f) set to true. This means that only sessions whose dataset attribute updateRightF = True can be modified.
Delete a session	Order session's Data Security Profile is contained on the user's Data Profile composition with its delete flag (auth_delete_f) set to true. This means that only sessions whose dataset attribute deleteRightF = True can be deleted.

27.5.2 Search criteria

For a complete description, see information about search criteria for Order Session in the *Triple'A Plus Web Packaging Reference Guide*.

27.5.3 Search output

For a complete description, see information about search output for Order Session in the *Triple'A Plus Web Packaging Reference Guide*.

28 Order Lists

The Order Lists function displays a summary and details of the list of orders for one or more portfolios between given dates and for given statuses. The different Order Lists are:

- **All Orders** allows you to see all orders for the selected portfolios and apply individual actions using icons.
- **Orders to Validate** shows only the orders that need a 4-eyes validation; that is to say, orders that can be validated or rejected. Only orders with a specific status ("To Validate" in standard packaging) and on which the user has the right to validate are displayed in this view. Validation or rejection can be done on multiple orders.
- **Cancellable Orders** shows orders that can be cancelled or orders for which a cancellation request can be asked. Only orders with statuses that allow cancellation are displayed in this view. Cancellation can be done on multiple orders. In standard packaging, orders can be cancelled when their status is equal to:
 - Expired, To Validate, Validation Rejected, Rejected, or Simulation for cancellable orders.
 - Sent, Received, Placed, or Partially Executed for a cancellation request on an order.

For detailed information about the Order Lists function, see the *Triple'A Plus Core User Guide*. For a list of the functions required for configuring the Order Lists function in the WUI, see the *Triple'A Plus Web Packaging Reference Guide*.

In this chapter, you will learn about:

- [Accessing the Order Lists function](#)
- [Using the Context section](#)
- [Order Lists results](#)

28.1 Accessing the Order Lists function

To access the **Order Lists** function:

1. Select the **Portfolio Analysis** tab.
2. From the menu bar, go to one of the following:
 - **Order Management > Order Lists > All Orders.**
 - **Order Management > Order Lists > Orders to Validate.**
 - **Order Management > Order Lists > Cancellable Orders.**

If you select **Order Management > Order Lists** from the menu bar, you will gain access to the first option of the menu (i.e., **All Orders**).

The order list can also be accessed after creating single orders via the action button **Order List**.

28.2 Using the Context section

1. To specify the nature of the order list to be performed, use the **Context** section of the Order List work area. The following table describes how to use the options in the **Context**:

Item	Selection	Description
Analysis Scope	All Portfolio Client Manager Advisor Portfolio List Query	Determines the portfolio or set of portfolios to be included in the order list. The default value is Portfolio.
Instrument Set	All Instrument Instrument List	This can restrict the order list to an instrument or set of instruments. The default value is All.
From	<calc_from_d>	Date that the order list is based on. The default value is today - 1 week.
Till	<calc_ref_d>	Date that the order list is based on. The default value is today.
Load Hierachy	No From Parent	By setting this to From Parent, the portfolio's child functions will be included in the valuation. The default value is From Parent.
Min Status	<one from all statuses from Cancelled through to Post Accounted>	Select the minimum statuses of the retrieved orders. The default value is Cancelled.
Max Status	<one from all statuses from Cancelled through to Post Accounted>	Select the maximum statuses of the retrieved orders. The default value is Executed.

- After you have made your selection, click the **Refresh** button to perform the order list.

28.3 Order Lists results

The detailed screen contains several sections, described in the sections below. For the three different Order List types, All Orders, Orders to Validate, and Cancellable Orders, the result screen is constructed in the same way. Only the List of Orders module is different in function to the Order List type.

28.3.1.1 Context section

The **Context** section is editable and is the same section that was described in section [Using the Context section](#).

28.3.1.2 Summary View section

The **Summary View** section presents in the form of a matrix the numbers of orders in the function of the order category and the order status. This **Summary View** is the same for the three different order lists: All Orders, Orders to Validate, and Cancellable Orders.

28.3.1.3 List of Orders section

The **List of Orders** section contains a collection of horizontally tabbed views detailing the orders of the selected portfolios (one or more portfolios). The tabs are based on the category of orders and are dynamic; that is, if no orders exist for a particular category, then that tab will not be displayed.

The possible tabs are:

- **All** (no filtering for this tab)
- **Security, Derivative and Other**
- **Forex**
- **Deposit and Loan**

Each tab has a different set of columns that apply for each category of Orders.

- **All Orders** tab:
 - On the result screen of the **Order List** for **All Order**, several actions can be performed on one order at screen time by clicking on the corresponding icon: validate, reject, update or cancel. The display of these icons is dynamic and depends on the status of the order and on the user rights. Currently, only security orders can be updated from the order list.
 - When an icon has been clicked, the selected update field function is performed and the status of the corresponding order is updated with the new status.
 - For order updates, if the order was already sent to the Order Management System (OMS), the order update screen is displayed containing only a limited number of editable fields. Input controls ensure that the modified order takes into account the already executed quantities by the OMS. Once saved, the status of the order is not changed, but the field event_action_e of the order is updated to have it caught by the subscription mechanism, which will send an update request to the OMS and wait for its answer. At the same time, a backup copy of the original order is saved in a dedicated table. If the order is rejected by the OMS, the original order is restored from its backup.
 - For cancellations, if the order was already sent to the OMS, the update field function also updates the field event_action_e of the order to have it caught by the subscription mechanism, which will send a cancellation request to the OMS and wait for its answer. If the order is accepted by the OMS, the status of the order is set to Cancelled.
- **Orders to Validate** tab:
 - On the result screen of the **Order List** for **Orders to Validate**, the first column is a checkbox that allows multiple selections of orders.
 - The update field functions are performed on selected orders through two buttons placed below the list of orders to validate or reject. The selection of the checkbox depends on the user rights.
- **Cancellable Orders** tab:
 - On the result screen of the **Order List** for **Cancellable Orders**, the first column is a checkbox that allows multiple selections of orders.
 - The update field function is performed on selected orders through a button placed below the list of orders to cancel. The selection of the checkbox depends on the user rights and the same rules as the **All Orders** tab apply.

From the list of orders, the user can also access details of each order by clicking on the **View** icon available on each order row.

Grouping orders and managing block orders

Select the orders by checking the checkboxes of the desired orders in the Select column. Then, to group the orders by generating a block order, click on the **Group Order** button.

You can detach child orders from the block order by checking the checkboxes of the child orders in the Select column and then, clicking on the **Detach Order** button. If you selected a block order, all child orders of the block order are detached and the block order is removed.

This feature is only available for orders that are included in the category Security / Derivative & Other.

29 Proposal Generator

The Proposal Generator provides Relationship Managers with the ability to prepare and send active trading advice to their clients, or to prospects, based on a pre-defined investment profile.

Once a proposal has been built, it is submitted to the client or the prospect in the form of a report. Once agreement of the client or prospect has been obtained, the proposal can be transformed into an order session and its constituting orders can be traded.

The life cycle of a proposal is managed by the application through statuses, which are described in the table below:

Status	Value	Description
Cancelled	10	Proposal has been deleted by the manager and is not visible any more in the application.
Working	20	Proposal has been created and has not been sent for validation yet.
Sent for Validation	40	A report has been produced and stored into the bank's repository. It must be sent to the client for official approval by an external process defined by the bank (either manual or automatic). If the manager wants to amend the proposal, this can still be done but the original proposal is archived (only the first one) and the manager will work on a copy.
Rejected	50	The client has rejected the proposal and the manager has marked it as such. It cannot be amended any more.
Validated	60	The client has approved the proposal and the manager has marked it as such. It cannot be amended any more, but can now be traded.
Validated for Trading	80	The manager has decided to validate the orders contained in the proposal. A new trading session has been created with the orders and the manager can complete them with the extra information needed before sending them to the market. This process can be considered as a "post-validation" of the proposal.
Released for Trading	70	The manager has decided to directly execute the orders contained in the proposal and marked it as such. The proposal session is published and orders contained in that proposal are executed.
Expired	90	The manager has sent the report to the client for validation but the client has not answered by the due date. The system automatically updates the status of the proposal to Expired.

A proposal always starts its life from the "Working" status. Then, depending on the actions executed by the manager, it can pass from one status to the other.

The validation for trading or the release for trading process can be made on several proposals. In this case, the processes run in asynchronous mode.

In this chapter, you will learn about:

- [Working with proposals](#)
- [Generating reports](#)
- [Proposal Generator Report](#)

29.1 Working with proposals

This section contains the following subsections to describe how to work with proposals:

- [Creating proposal](#)
- [Managing Investment Profile of proposals](#)
- [Adding external positions to proposals](#)
- [Adding orders to proposals](#)
- [Viewing and modifying orders in proposals](#)
- [Managing cases and clarifications](#)
- [Using simulations](#)
- [Searching for proposals](#)
- [Actions available on proposals](#)
- [Validating for trading single or multiple proposals](#)
- [Trading single or multiple proposals](#)
- [Viewing proposals](#)
- [Copying proposals](#)
- [Retrieving expired proposals](#)
- [Purging expired proposals](#)

29.1.1 Creating proposals

Managers can create proposals easily by selecting **Create Proposal** from the **Proposal Generator** entry of the menu.

- If the context has no portfolio or portfolio set selected, the system will ask the manager to search and select a portfolio first.
- If a context is already set with a portfolio, the system will ask the manager to either confirm that the manager wants to use that portfolio or search and select another one.
- If a context is set with a set of portfolios, the system will display all portfolios that are part of the set and ask the manager to either choose among the displayed portfolios or search and select another one.

Note that the portfolio search criteria for Proposal Generator cannot be saved as a query.

Once a portfolio has been selected, the system opens the proposal for editing. The proposal editing screen contains:

- A section showing basic information about the proposal and a set of action buttons.
- A section composed of several tabs:
 - **Compliance** tab showing:
 - A comparison using three graphs to present:
 - Portfolio current weight for the first market segment level.
 - Strategy objectives for the first market segment level.
 - Portfolio weight that includes orders defined in the Proposal Generator (PG) for the first market segment level.
 - Compliance details of the portfolio of the proposal according to the selected investment profile.
 - **Constraints** tab that displays the allocation constraints, constraints on instruments, holding constraints, exclusion constraints, and trading constraints.
 - **Checks & Controls** tab that allows for the management of cases and clarifications.
- A section allowing management of Orders.
- A section displaying the List of Orders.

29.1.2 Managing Investment Profile of proposals

A proposal can be created with or without having an Investment Profile linked to the selected portfolio. To view, select, or change the Investment Profile, the manager can click the **Manage IP** button at the top of the proposal screen, which will open a screen that allows the manager to select another Investment Profile, if needed. This screen will also display the asset allocation and a graphical representation of the Investment Profile currently selected.

Note: If no valid Investment Profile is selected, the latter is not displayed.

29.1.3 Adding external positions to proposals

External positions are assets of the client that are held outside of the bank but which the manager wants to take into account when elaborating the investment proposal. These positions, which have a special operation status in Triple'A Plus Core (External Position), can be managed by clicking on **External Positions** button. For more information on operation statuses, see the *Triple'A Plus Web Packaging Reference Guide*.

External positions will be taken into account automatically by the rebalancing function.

29.1.4 Adding orders to proposals

There are two ways of adding orders to a proposal: automatically by using the rebalancing function or manually by selecting the desired instruments.

Rebalancing is only available if the portfolio is linked to a valid Investment Profile (of type allocation) or the manager has previously selected one manually. It can be executed by clicking on **Rebalance** button while editing the proposal.

Executing the rebalancing function will delete all orders already present in the proposal and generate new ones. If external positions are linked to the proposal, they will be taken into account by the function.

Manual creation of orders can be done while editing the proposal by clicking on one of the buttons (**Security**, **Derivative**, **Forex**, **Deposit**, and **Loan**) available in the **Create Order** box in the **List of Proposed Orders** section. After a button is clicked on, a pop-up window is displayed where you can enter only a few fields before saving the information. If you want to access the full-order screen, select the **detailed** radio button at the top of the window.

Manual orders can be captured by selecting Target Nature where the available options are:

- Quantity. The manager inputs a quantity in the appropriate field, and the amount to invest will be automatically calculated.
- Amount. The manager inputs the amount that must be invested, and the quantity will be automatically calculated.
- In percentage of the portfolio market value. The manager inputs the desired percentage, and the amount and quantity will be automatically calculated.
- In percentage of the market segment to which the selected instrument belongs. The manager inputs the desired percentage, and the amount and quantity will be automatically calculated.

The manager has the option to include in the report a fact sheet of the proposed instrument, if it exists. Fact sheets are supposed to be retrieved from an external source defined by the bank and this configuration must be part of the implementation. For more information on how to implement this functionality, see the *Triple'A Plus Web Proposal Generator Configuration Guide*.

29.1.5 Viewing and modifying orders in proposals

In the module displaying the list of orders, the manager can either update or delete orders by clicking the corresponding icon. To see images of the icons used in the WUI, see section [Icons, fields, and links](#).

29.1.6 Managing cases and clarifications

The cases generated by the orders of the proposal are accessible under the tab **Checks & Controls**. This tab contains the following sections:

- The **Compliance Cases** section is only displayed if the Case Management function is activated. This section displays a list of cases generated by executing the Pre-Trade Check Strategy function when adding or updating an order.
- The **Sanity Checks per Order** section displays a list of cases generated by executing the Verify Session Input Control function. One case per input control message is created, as well as one summary message.

The management of cases and clarifications in Proposal Generator are similar to the management of cases and clarifications in Order Session. For more information, see section [Compliance tab](#).

29.1.7 Using simulations

To see the impact of a proposal on the client's portfolio, the manager can launch a set of functions in Simulation mode. This means that the content of the proposal, including orders and eventual orders, will be taken into account by the financial function that was executed.

The functions permitting this are Valuation, Compliance Checking, and Future Cash Flow. Each one can be accessed by clicking the corresponding simulation button located at the top of the proposal.

For each one of these functions in simulation mode, the manager will be presented with a screen which is very similar to the one displayed for the function itself (accessed via the standard menu). The main difference is that you cannot initiate orders from these screens and the availability of the **Include Orders** checkbox at the top of the screen, enabling the manager to run the function with or without taking the orders into account.

In the **Simulate Compliance** screen, two pie charts are available to show the asset class proportions for the current portfolio and for the strategy. This simulated compliance checking is computed by including orders of the proposal. The first graph presents the portfolio weight for the first market segment level and the second graph presents the strategy objectives weight for the first market segment level.

In the **Simulate Valuation** screen, the number of columns that is displayed by default in the tabbed pane **List of Positions** is reduced.

29.1.8 Searching for proposals

To retrieve a proposal, the manager can click the **Existing Proposal(s)** option in the **Proposal Generator** entry of the global menu.

A standard search screen appears where the manager can select the search criteria. This screen is organised in tabs corresponding to each status in the life of a proposal.

The results of the proposal search are presented in a table containing a series of icons. Each icon corresponds to a specific action the manager can execute.

Note that traded proposals can be considered as standard order sessions and therefore, can be retrieved from the search order session screen under the tabs **All** and **Released for trading**. For more information about search sessions, see section [Session search](#).

For a complete description, see information about search output for Order Proposals in the *Triple'A Plus Web Packaging Reference Guide*.

29.1.9 Actions available on proposals

Many different actions can be executed on a proposal. Their access is managed by both the status of the proposal and rights given to the manager through the manager's Data Security Profile, set in Triple'A Plus Core. For more information on security and profiles, see the *Triple'A Plus Core System Management Guide* and *Triple'A Plus Web Proposal Generator Configuration Guide*.

For detailed information about the icons used in the WUI, see section [Icons, fields, and links](#).

Status	Description
View a proposal (Details icon)	This action is always available, regardless of the status of the proposal. Clicking the Details icon displays the proposal in read-only mode. See section Validating for trading single or multiple proposals for details.
Amend a proposal (Edit icon)	This action is only available from the Working or Sent for Validation tabs. Upon clicking the icon, if the status is "Sent for Validation", a warning message is displayed and tells the user that the user is going to update a proposal that was already sent to the client and that the original one will be archived. Then, a copy of the original proposal is opened and the user can modify it. Note that only the original proposal is archived and not the intermediate ones also sent to the client for approval.
Copy a Proposal (Copy icon)	This action is always available, regardless of the status of the proposal. Clicking the Copy icon opens the newly created proposal for editing.
Generate report on a proposal (Configure and generate report icon)	This action is only available from the Working tab. Upon clicking the icon, the report content configuration screen is displayed. The report content configuration process is detailed later in this guide in section Generating reports . At the end of this process, if the user wants to send the report to the client for approval, the status of the current proposal is set to "Sent for Validation". Note that the report is only sent to the repository. Sending the produced report to the client can be either done manually by the manager or automatically by a process that must be implemented by the bank.
Accept a proposal (Accept icon)	This action is only available from the Sent for Validation tab. A confirmation pop-up window is displayed to the user with the following text: Do you really want to accept this proposal? Two action buttons are available below the text: Ok: Passes the status to "Validated" and reloads the search screen. Cancel: Closes the message box.

Status	Description
Reject a proposal (Reject icon)	This action is only available from the Sent for Validation tab. A confirmation pop-up window is displayed to the user with the following text: Do you really want to reject this proposal? Two action buttons are available below the text: • Ok: Passes the status to Rejected and reloads the search screen. • Cancel: Closes the message box.
Validate for trading a single proposal (Validate for trading icon)	This action is only available from the Validated tab. A confirmation pop-up window is displayed to the user with the following text: Do you really want to validate this proposal for trading? Two action buttons are available below the text: • Ok: Starts the validation process. • Cancel: Closes the message box. See section Process: Validate for trading a single proposal for more details about the validation for trade process.
Trade a single proposal (Trade icon)	This action is only available from the Validated tab. A confirmation pop-up window is displayed to the user with the following text: Do you really want to trade this proposal? Two action buttons are available below the text: • Ok: Starts the trading process. • Cancel: Closes the message box. See section Process: Trade a single proposal for more details on the trading process.
Validate for trading several proposals (Validate for trading button)	This action is only available from the Validated tab. A confirmation pop-up window is displayed to the user with the following text: Do you really want to validate these proposals for trading? Two action buttons are available below the text: • Ok: Starts the validation process. • Cancel: Closes the message box. See section Process: Validate for trading several proposals for more details about the validation for trade process.
Trade several proposals (Trade button)	This action is only available from the Validated tab. A confirmation pop-up window is displayed to the user with the following text: Do you really want to trade these proposals? Two action buttons are available below the text: • Ok: Starts the trading process. • Cancel: Closes the message box. See section Process: Trade several proposals for more details on the trading process.
Remove a proposal (Delete icon)	This action is only available from the Working or Rejected tabs. A confirmation pop-up window is displayed to the user with the following text: Do you really want to delete this proposal? Two action buttons are available below the text: • Ok: Passes the status to Cancelled and reloads the search screen. • Cancel: Closes the message box. Note that a proposal with "Cancelled" status is not visible in the application.

29.1.10 Validating for trading single or multiple proposals

To validate for trading, you can:

- Validate each proposal one by one by clicking on the **Validate for trading** icon available on each row of the search result screen (on the **Validated** tab).
- Validate several proposals at the same time by first selecting the proposals to validate (i.e., placing a checkmark in the checkbox of the desired proposals on the search result table) and then clicking on the **Validated for trading** button.

29.1.10.1 Process: Validate for trading a single proposal

The following process is applied when you validate for trading a single proposal:

1. The system makes a copy of the main proposal and sets its parent proposal as the code of the main proposal including all required elements (e.g., characteristics, orders, etc.).
2. The status of the main proposal is set to "Validated for trading".
3. The system executes the Pre-Trade Compliance Check function on the created session.
4. The user is redirected to the order session edit screen, which displays the new session.

29.1.10.2 Process: Validate for trading several proposals

The following asynchronous process is applied when you validate for trading several proposals:

1. The system updates the status of the selected proposals to "Validation for trading running".
2. The system makes copies of the selected proposals and sets the parent proposal code on each newly created session.
3. The system executes the Pre-Trade Compliance Check function on each new session.
4. The system updates the status of the main proposals to "Validated for trading".
5. The user is redirected to the **All** tab of the order session search screen.

29.1.11 Trading single or multiple proposals

To trade the proposals, you can:

- Trade each proposal one by one by clicking on the **Trade** icon available on each row from the search result screen (on the **Validated** tab).
- Trade several proposals at the same time by first selecting the proposals to trade (i.e., placing a checkmark in the checkbox of the desired proposals on the search result table) and then clicking on the **Trade** button.

Once a proposal is traded, you can retrieve it from the search proposal under the **All** tab or the **Release for trading** tab. As this proposal is traded, it is now considered as an order session and can also be retrieved from the search order session screen under the **All** and **Released for trading** tabs. For more information about search sessions, see section [Session search](#).

29.1.11.1 Process: Trade a single proposal

The following process is applied when you trade a single proposal:

1. The status of the selected proposal is set to "Release for trading running".
2. The system publishes the proposal session in asynchronous mode.
3. The system displays the **Validated** tab of the search proposal screen.

4. The system updates the status of the published proposal session to "Released for trading".

29.1.11.2 Process: Trade several proposals

The following asynchronous process is applied when you trade several proposals:

1. The status of the selected proposals is set to "Release for trading running".
2. The system publishes the selected proposals in asynchronous mode.
3. The system displays the **Validated** tab of the search proposal screen.
4. The system updates the status of the published proposal sessions to "Released for trading".

29.1.12 Viewing proposals

When the user clicks the **Details** icon of a proposal in the **Existing Proposal(s)** screen (search results), the selected proposal is opened in read-only mode. The same applies if the user clicks the code of an Original Proposal.

The screen presented is the same as the one used for proposal creation/update, except for the items listed below:

- All items are read-only.
- It is not possible to generate a report.
- The button **Manage IP** is called **Show IP** instead.
- An extra button enabling the manager to view the comments linked to the report is displayed to the right of the other buttons.
- Simulations are not available.
- When opening the proposal, dates are not recalculated
- The **Add/Update Order** section is not displayed.
- In the **List of Orders** section, the buttons **Create Buy Order** and **Create Sell Order** are not displayed.

29.1.13 Copying proposals

When the user clicks the **Copy** icon of a proposal in the **Existing Proposal(s)** screen (search results), the selected proposal is copied, and the newly created proposal is opened in edition mode. For more information, see section [Creating proposal](#).

29.1.14 Retrieving expired proposals

When the status of the order proposal is set to "Sent for validation", the attribute `expiration_date` is automatically set by the system to the current date plus the value of the system parameter `DS_VALIDITY_PERIOD` (by default this period is set to 10 days). For more information about this system parameter, refer to *Triple'A Plus Web Proposal Generator Configuration Guide*.

Once the expiration date is passed, the system will automatically update the status of the order proposal to "Expired".

Expired proposals can be retrieved under the **Expired** tab of the existing search proposals. The actions available on expired sessions are:

- [Viewing proposal](#)
- [Copying proposal](#)

29.1.15 Purging expired proposals

Expired proposals are automatically purged by the system after a delay defined by the system parameter `PURGE_SESSION_DELAY`. By default, this delay is set to 60 days, which corresponds to the number of days during which expired proposals are kept before they are deleted. For more information about this system parameter and the purge process, refer to *Triple'A Plus Web Proposal Generator Configuration Guide*.

29.2 Generating reports

Generating the Proposal Generator report can be done by:

- Clicking the **Preview Report** button when modifying your proposal.
- Clicking the **Generate Report** button on the search screen of the *Existing Proposal(s)*, located only on the *Working* tab.

Once you have selected the report generation, the report content screen is displayed. If you are arriving to this screen for the first time, the screen is displayed with the default values set in Triple'A Plus Core. If you configured values for this proposal the last time you entered your reporting parameters, the screen is displayed with these values.

1. Modify the default parameters as desired.
2. Click **View Draft Report** button to see a preview of the report or click **Send Report to Repository** button to have the report generated and stored into the repository. Beware that sending the report to the repository will automatically change the status of the proposal from option Working to Send to Repository, preventing additional modifications on the proposal.

If any errors are raised (for example, technical errors or business errors defined in Triple'A Plus Core as input controls), an error message is displayed on the screen. These errors must be resolved before report generation can continue.

If no errors are raised, the report is displayed on another screen (if you chose the **View Draft Report** button) or you will be redirected to the Existing Proposal(s) search screen (if you chose the **Send Report to Repository** button).

29.2.1 Financial Parameters section

The Financial Parameters section defines how the financial data is computed. Refer to *Triple'A Plus Core Business Function Guide* for a detailed description of each parameter.

Note: The Financial Parameters section is the only section in the Reporting work area that affects how data is computed; all other sections define how the data is displayed in the report or add some additional comments.

29.2.2 Report Options section

The report options are the same as in the Client Statement Report options (see section [Client Statement Report](#)).

29.2.3 Contact Details section

This option enables the inclusion of certain additional information about the contact details to the report. It will be displayed in the information section of the report.

29.2.4 Report Blocks Selection section

The following table explains how to use the options in the Report Blocks Selection section. All options are closely related to the Proposal Generator report capabilities.

Parameter	Description
Predefined Options	Each predefined option value corresponds to a set of default values for the report blocks selection. By default, two values are provided: "light summary" and "all sections".
Initial Portfolio (current portfolio situation) - Valuation section	
Display Type	<i>Not shown</i> means that the entire valuation section is not included. <i>Summary</i> means that only the asset allocation appears on the report. <i>Simple</i> means a light version of a list of positions appears on the report. <i>Detailed</i> means that a comprehensive list of positions appears on the report.
Additional Stock Charts	If checked, a stock chart is added to the report after the asset allocation.
Additional Bonds Charts	If checked, a bond chart is added to the report after the asset allocation.
Initial Portfolio (current portfolio situation) - Cash Flow section	
Display Type	<i>Not shown</i> means that the entire cash flow section is not included. <i>Summary</i> means that only the future cash flow matrix appears on the report. <i>Detailed</i> means that a section with the cash flow list (by year, by currency, and by instruments) and a section with the cash flow list by period appear on the report.
Additional Maturity Chart	If checked, a maturity chart is added to the report after the cash flow matrix.
Additional Currency Chart	If checked, a currency chart is added to the report after the cash flow matrix.
Initial Portfolio (current portfolio situation) - Compliance section	
Display Type	<i>Not shown</i> means that the entire compliance section is not included. <i>Summary</i> means that only the compliance summary section appears on the report. <i>Detailed</i> means that the compliance detailed section appears on the report. The compliance summary section will not be displayed using this option.
Final Portfolio (including the orders) - Valuation section	
Display Type	<i>Not shown</i> means that the entire valuation section including the orders is not included. <i>Summary</i> means that only the asset allocation appears on the report. <i>Simple</i> means a light version of a list of positions appears on the report. <i>Detailed</i> means that a comprehensive list of positions appears on the report.
Additional Stock Charts	If checked, a stock chart is added to the report after the asset allocation.
Additional Bonds Charts	If checked, a bond chart is added to the report after the asset allocation.
Final Portfolio (including the orders) - Cash Flow section	
Display Type	<i>Not shown</i> means that the entire cash flow section including the orders is not included. <i>Summary</i> means that only the future cash flow matrix appears on the report. <i>Detailed</i> means that a section with the cash flow list (by year, by currency, and by instruments) and a section with the cash flow list by period appear on the report.
Additional Maturity Chart	If checked, a maturity chart is added to the report after the cash flow matrix.

Parameter	Description
Additional Currency Chart	If checked, a currency chart is added to the report after the cash flow matrix.
Final Portfolio (including the orders) - Compliance section	
Display Type	<i>Not shown</i> means that the entire compliance section is not included. <i>Summary</i> means that only the compliance summary section appears on the report. <i>Detailed</i> means that the compliance detailed section appears on the report. The compliance summary section will not be displayed using this option.
Proposed Orders	
Display Type	<i>Not shown</i> means that the proposed orders list will be hidden. Additionally, eventual comments on the market segments will also be hidden. <i>Included</i> means that the proposed orders list will be displayed with the eventual comments on market segments.

29.2.5 Comments section

This section enables the addition of two comments for each market segment (asset class) that will be displayed in the report if some orders are present for the segment: a market outlook comment and an advice comment. Each comment can be formatted independently and are displayed using the specified format directly in the report. Each comment is limited to 2000 characters. Note that the formatting counts into this limit, reducing the number of characters available.

This section contains also two additional comments concerning assumptions/opening comments and conclusion/summary comments of the proposal. Both comments are can also be formatted and are limited like their predecessors.

At last, all comments will be saved to the proposal for future use and are language dependant (See [Financial Parameters section](#)).

29.3 Proposal Generator Report

The Proposal Generator Report uses the Actuate e.Report technology. It is the standard report provided as an output for the proposal generation process. The report can display some general and detailed information derived from Triple'A Plus Core financial functions, such as the valuation of the portfolio's current positions as well as its valuation including the orders proposed during the proposal process.

The Proposal Generator Report employs the latest Triple'A Plus Reporting functionalities, such as style sheet usage that enables the changing of the whole report layout at runtime (See section [Report Options](#) section), and the report modularity that enables the sharing of sections with other reports, or the changing of its content by activation/deactivation of sections using the Report Block Selection options (see section [Report Block Selection](#)). Once a section is deactivated, the report will not call any unneeded financial function, speeding up the report generation time.

The sections of the report will appear in the following order:

- [Cover page section](#)
- [Information section with table of contents](#)
- [Opening comment section](#)
- [Asset allocation section \(current portfolio situation\)](#)
- [Asset allocation - Additional charts section \(current portfolio situation\)](#)
- [Simple list of positions section \(current portfolio situation\)](#)

- [Detailed list of positions section \(current portfolio situation\)](#)
- [Cash flow analysis section \(current portfolio situation\)](#)
- [Cash flow details section \(current portfolio situation\)](#)
- [Compliance summary section \(current portfolio situation\)](#)

If the report cannot produce any pages because no data can be retrieved for the current analysis scope, only the No Data section appears as a small page indicating that there is no data for the selected report scope. It is, however, only displayed if there is no data for the report that replaces the standard hardcoded page with a fully customizable report module.

29.3.1 Cover page section

The first page of the report is the cover page. It shows the report titles and a cover page image. This section is mandatory and cannot be deactivated using a Report Block Selection option (see section [Report Block Selection](#)).

If the report has been requested to be generated anonymously, using the report options (see section [Report Options](#) section), the cover page image disappears because it could contain a bank's logo. Additionally, the small logo on the top left of the page disappears from all pages.

29.3.2 Information section with table of contents

The next page of the report shows certain global information on its left side, such as the reporting date, client, portfolio scope, private client manager, and portfolio manager information. On its right side, the page displays the table of contents of the report.

The section is also mandatory. However, you can deactivate the table of contents (the right part), showing only the global information on the left part.

Finally, if the report has been set to be generated anonymously using the report options (see section [Report Options](#) section), all client information, portfolio information, bank information, and managers' details disappear, leaving only the reporting date and the valuation currency.

29.3.3 Opening comment section

This section displays an eventual opening comment entered by the user on the Report Generation page.

This section is only displayed if an opening comment has been entered for the current report generation language.

29.3.4 Asset allocation section (current portfolio situation)

This section is part of the valuation sections. It displays in a single page a valuation summary of the portfolio, with an asset allocation matrix by currency classification, an asset allocation chart, a currency classification allocation chart, and the exchange rates of the currencies. The data concerns the current situation of the portfolio and so does not include the orders proposed during the proposal process.

This section is optional. It can be displayed or hidden according to your needs using the Report Block Selection options (see section [Report Block Selection](#)), but it is linked to the valuation report options. It is hidden when the valuation report option is set to Not Shown and displayed for all other choices.

29.3.5 Asset allocation - Additional charts section (current portfolio situation)

This section is part of the valuation sections. It displays in a single page two groups of charts. Fixed incomes charts group displays the fixed incomes allocation by maturity, rating, and region. Stocks charts group displays the stocks allocation by sector, rating, and region. The data concerns the current situation of the portfolio and so does not include the orders proposed during the proposal process.

This section is optional. It can be displayed or hidden according to your needs using the Report Block Selection options (see section [Report Block Selection](#)), but it is linked to the valuation report options. It is hidden when the valuation report option is set to Not Shown and displayed for all other choices.

Additionally, both charts groups can be deactivated independently using the Report Block Selection options (see section [Report Block Selection](#); specifically, Initial Portfolio Additional Stock Charts and Additional Bonds Charts options). If no data is available for one member of the group, the entire group will not be displayed. Finally, if only one group is available, due to data or user deactivation, the remaining group will always be displayed at the top of the page.

29.3.6 Simple list of positions section (current portfolio situation)

This section displays a simple list of positions but in a simple view, with the very same information for each asset class. It is followed by the exchange rates of the available currencies. According to the number of positions of the portfolio, this section can be displayed on several pages. The data concerns the current situation of the portfolio and so does not include the orders proposed during the proposal process.

This section is optional. It can be displayed or hidden according to your needs using the Report Block Selection options (see section [Report Block Selection](#)), but it is linked to the valuation report options. It is hidden when the valuation report option is set to Not shown, Summary, or Detailed and displayed for the option Simple.

29.3.7 Detailed list of positions section (current portfolio situation)

This section displays the detailed list of positions, with specific information for each asset class. It is followed by the exchange rates of the available currencies. According to the number of positions of the portfolio, this section can be displayed on several pages. The data concerns the current situation of the portfolio and so does not include the orders proposed during the proposal process.

This section is optional. It can be displayed or hidden according to your needs using the Report Block Selection options (see section [Report Block Selection](#)), but it is linked to the valuation report options. It is only displayed for the Detailed option and hidden for all other choices.

29.3.8 Cash flow analysis section (current portfolio situation)

This section is part of the cash flow sections. It displays in a single page the future cash flow in a matrix grouped by currencies classification for the next five years. It also shows two charts, the cash flow by currencies stacked by years and the cash flow by years stacked by currencies for the next five years. The data concerns the current situation of the portfolio and so does not include the orders proposed during the proposal process.

This section is optional. It can be displayed or hidden according to your needs using the Report Block Selection options (see section [Report Block Selection](#)), but it is linked to the cash flow report options. It is hidden when the cash flow report option is set to Not Shown and displayed for all other choices.

Additionally, both charts can be deactivated independently using the Report Block Selection options (see section [Report Block Selection](#); in particular, Additional Maturity Chart and Additional Currency chart options). If no data is available for the cash flow, the entire page is not displayed. Finally, if only one chart is available, due to user deactivation, the remaining chart is always displayed at the left of the page.

29.3.9 Cash flow details section (current portfolio situation)

This section is part of the cash flow sections. It displays the details of the future cash flow for the next five years for each instrument that will have some incoming or outgoing flows. It displays this information grouped by year up to the instrument level, detailing the income and buy or sell flows by currencies. All amounts are expressed in the reference currency so that the report can provide totals by instruments, flows, and years.

Then, this section will display another future cash flow details for the next six years grouped by currencies and years, but not going up to the instrument level as previously, and displaying the amounts using the currency of the position. For each currency a total is computed, expressed both in the current currency and in the reference currency.

The data for these sections concerns the current situation of the portfolio and so does not include the orders proposed during the proposal process.

This section is optional. It can be displayed or hidden according to your needs using the Report Block Selection option (see section [Report Block Selection](#)) but is linked to the cash flow report options. It is displayed when the cash flow report option is set to Detailed and hidden for all other choices.

29.3.10 Compliance summary section (current portfolio situation)

This section shows a summary of all portfolios of the list and their compliance against each one's strategy.

This section is optional. It can be displayed or hidden according to your needs using the Report Block Selection options (see section [Report Block Selection](#)) but is linked to the compliance report options. It is hidden when the compliance report option is set to Not Shown and displayed for all other choices. However, as the scope of the Proposal Generator report concerns only one portfolio and when the report option is set to Detailed, this section is hidden to avoid having a single line in the summary that is then shown in detail in the next section.

29.3.11 Compliance detailed section (current portfolio situation)

This section has two main sections: Compliance Comparison and Constraints section and Compliance Details section.

The Compliance Comparison and Constraints section shows two compliance graphs and the list of constraints. One chart provides compliance comparison by asset class, showing the current assets weights compared to the objectives, while a similar chart shows the current currencies' weights compared to the objectives.

The Compliance Details section shows all strategy compliance for the current portfolio grouped by sub-segments and down to instruments.

This entire section is optional. It can be displayed or hidden according to your needs using the Report Block Selection options (see section [Report Block Selection](#)) but is linked to the compliance report options. It is displayed when the compliance report option is set to Detailed and hidden for all other choices. However, each part of the section is hidden independently if no compliance data is available for them.

29.3.12 Proposed orders section

This section displays the list of proposed orders, grouped by buy and sell operation nature.

This section is optional. It can be displayed or hidden according to your needs using the Report Block Selection options (see section [Report Block Selection](#)).

29.3.13 Case management section

This section has two main sections: Compliance Cases section and Sanity Check section (also known as Input Control).

The Compliance Cases section displays all cases related to the order sessions or market segment including their clarifications. The Sanity Check section displays all violated input controls related to the order sessions.

This entire section is mandatory and cannot be hidden.

29.3.14 Comments section

This section displays the eventual comments for each market segment (asset class) entered on the Report Generation page and saved for the proposal.

This section is optional. It can be displayed or hidden according to your needs using the Report Block Selection option (see section [Report Block Selection](#)) linked to the proposed orders section. Additionally, if no comments are available for the current report language and for available segment, this section could disappear.

29.3.15 Asset allocation section (including proposed orders)

This section is the same as its predecessor, but it takes the current situation including the proposed orders.

29.3.16 Asset allocation - Additional charts section (including proposed orders)

This section is the same as its predecessor, but it takes the current situation including the proposed orders.

29.3.17 Simple list of positions section (including proposed orders)

This section is the same as its predecessor, but it takes the current situation including the proposed orders.

29.3.18 Detailed list of positions section (including proposed orders)

This section is the same as its predecessor, but it takes the current situation including the proposed orders.

29.3.19 Cash flow analysis section (including proposed orders)

This section is the same as its predecessor, but it takes the current situation including the proposed orders.

29.3.20 Cash flow details section (including proposed orders)

This section is the same as its predecessor, but it takes the current situation including the proposed orders.

29.3.21 Compliance summary section (including proposed orders)

This section is the same as its predecessor, but it takes the current situation including the proposed orders.

29.3.22 Compliance detailed section (including proposed orders)

This section is the same as its predecessor, but it takes the current situation including the proposed orders.

29.3.23 Closing comment section

This section displays an eventual closing comment entered by the user on the Report Generation page.

This section is only displayed if a closing comment has been entered for the current report generation language.

29.3.24 Disclaimer section

This section displays a disclaimer retrieved from an external RTF file. The contents depend on the language used to generate the report. Content of the disclaimer can be displayed using two or more columns; currently, the content is displayed using two columns.

This section is mandatory and cannot be hidden.

29.3.25 Fact sheets section

This section displays the list of instruments for which some facts sheet could be available. The instruments are related to the proposed orders for which the fact sheet should be annexed if available.

This section is mandatory and is displayed if some fact sheets are required by the proposed orders.

30 Administration

The Administration menu, available under the **Portfolio Analysis** tab, manages the data of business entities (e.g., portfolios and strategies) later to be used in back-to-front (B2F) and front-to-back (F2B) functions of the **Portfolio Analysis** tab.

Currently, the administration of business entities is limited to:

- [Administration of portfolios](#)
- [Administration of Strategies](#)

For more information about all possible actions per business entity, refer to the *Triple'A Plus Web Packaging Reference Guide*.

30.1 Administration of portfolios

Administration of portfolios provides the possibility to manage direct strategy links related to the portfolio and modelling constraints associated with the portfolio. For explanations about the implementation, refer to the *Triple'A Plus Web Packaging Reference Guide*.

In the following sections, you will learn about:

- [Viewing existing associated allocation constraints](#)
- [Updating existing allocation constraints](#)
- [Deleting existing allocation constraints](#)
- [Copying existing allocation constraints](#)
- [Viewing existing associated exclusion constraints](#)
- [Creating new exclusion constraints](#)
- [Updating existing exclusion constraints](#)
- [Deleting existing exclusion constraints](#)
- [Viewing existing related direct strategy links](#)
- [Creating new direct strategy links](#)
- [Updating existing direct strategy links](#)
- [Deleting existing direct strategy links](#)

30.1.1 Viewing existing associated allocation constraints

You must have access rights to view the menu **Administration** and its command `Portfolio`, and you must have access rights on the portfolio. For more information about the security of the **Administration** menu and its subcommands, refer to the *Triple'A Plus Web Packaging Reference Guide*.

To view an existing allocation constraint associated with a portfolio:

1. Initiate a search on portfolios by clicking on the command `Portfolio` of the menu **Administration** (or directly on the menu **Administration**) located under the **Portfolio Analysis** tab.
A search screen on portfolios is displayed.
2. Define the search criteria and execute the search. For more information, see section [Searching a business object with Search or Advanced Search icon](#).

Matching records of portfolios, on which you have access rights, are displayed. The first column of the results contains a **Details** icon for each retrieved record. (For more information about icons, see section [Icons, fields, and links](#)).

Note: Without matching records, it is impossible to continue.

3. Click on the **Details** icon of the portfolio in which you want to see its associated allocation constraints.

The portfolio administration screen is displayed under the **Constraints** tab. Existing associated allocation constraints are retrieved and displayed in a list immediately below the tab. These associated allocation constraints contain the following information:

- Modify column provides an **Edit** icon to modify the allocation constraint as described in section [Updating existing allocation constraint](#). The **Edit** icon is only displayed if you have update rights on the constraint (see *Triple'A Plus Web Packaging Reference Guide* for more details).
- Delete column provides a **Delete** icon to delete the allocation constraint as described in section [Deleting existing allocation constraint](#). The **Delete** icon is only displayed if you have deletion rights on the constraint (see *Triple'A Plus Web Packaging Reference Guide* for more details).
- View column provides a **Details** icon to display all details of the allocation constraint in a pop-up window.
- Copy column provides a **Copy** icon to copy the allocation constraint as described in section [The allocation constraint is not](#) deleted and is still displayed in the list of existing allocation constraints.
- Copying existing allocation constraint.
- Description column is not editable and provides a description of the allocation constraint in the language selected in the user's preferences. It is in fact a translated denomination related to its modelling constraint set (*entity model_constraint*).
- Begin on column is not editable and provides the begin date of the allocation constraint.
- End on column is not editable and provides the end date of the allocation constraint. It is the end date of its modelling constraint set (*entity model_constraint*).

Only the allocation constraints corresponding to the filter defined by the selected radio button are displayed. The radio buttons are:

- **All constraints:** All retrieved allocation constraints are displayed.
- **All active constraints:** Only the active allocation constraint is displayed (see the *Triple'A Plus Web Packaging Reference Guide* for details about active modelling constraints). It is the default selection made by the system.
- **All inactive constraints:** Only the inactive allocation constraints are displayed (see the *Triple'A Plus Web Packaging Reference Guide* for details about inactive modelling constraints).

4. (Optional) Click on the **Details** icon of an allocation constraint to view all its details.

The details of the selected allocation constraint are displayed in a pop-up window and are divided into the following sections: Details and Objectives sections.

- The Details section contains the following information:
 - **Portfolio** field is not editable and provides the code and name of associated portfolio.
 - **Description** field is not editable and provides a description of the allocation constraint in the language selected in the user's preferences. It is in fact a translated denomination related to its modelling constraint set (*entity model_constraint*).
 - **Begin Date** field is not editable and provides the begin date of the allocation constraint.
 - **End Date** field is not editable and provides the end date of the allocation constraint. It is the end date of its modelling constraint set (*entity model_constraint*).

- The Objectives section contains the following information related to the modelling constraint elements (*entity model_constr_elt*) and is displayed in a tree view:
 - Market Segment column is not editable and provides the denomination of the associated market segment.
 - Minimum Weight column is not editable and provides the minimum objective for the corresponding market segment.
 - Objective Weight column is not editable and provides the objective with its margins for the corresponding market segment. This information is directly related to the strategy's objectives on which the allocation constraint is based.
 - Maximum Weight column is not editable and provides the maximum objective for the corresponding market segment.
 - Fixed Objective column is not editable and provides an indication about whether the Objective Weight must be taken as a fixed value or not. A **Checkmark** icon indicates a fixed objective.
 - Severity column is not editable and provides the severity's constraint for the corresponding market segment.

30.1.2 Updating existing allocation constraints

You must first display the list of existing allocation constraints (see section [Viewing existing associated allocation constraints](#) for the details), and you must have update rights on the constraint. For more details, refer to the *Triple'A Plus Web Packaging Reference Guide*.

To update an existing allocation constraint associated with a portfolio:

1. In the list of existing allocation constraints, click on the **Edit** icon of the allocation constraint to update. (For more information about icons, see section [Icons, fields, and links](#).)

Details of the selected allocation constraint are displayed in the following sections:

- The Description section contains the following information:
 - **English Description** field is editable and provides the constraint's description in English. It is in fact a denomination, in English, associated with the constraint (*entity model_constraint*).
 - **French Description** field is editable and provides the constraint's description in French. It is in fact a denomination, in French, associated with the constraint (*entity model_constraint*).
 - **German Description** field is editable and provides the constraint's description in German. It is in fact a denomination, in German, associated with the constraint (*entity model_constraint*).
- The Definition section contains the following information:
 - **Portfolio** field is not editable and provides the code and name of associated portfolio.
 - **Begin Date** field is not editable and provides the begin date of the allocation constraint.
 - **End Date** field is editable and provides the end date of the allocation constraint. It is the end date of its modelling constraint set (*entity model_constraint*).
- The Objectives section contains the following information related to the modelling constraint elements (*entity model_constr_elt*) and is displayed in a tree view:
 - Market Segment column is not editable and provides the denomination of the associated market segment.

- Minimum Weight column is editable for any market segment and provides the minimum objective for the corresponding market segment.
 - Objective Weight column is not editable and provides the objective with its margins for the corresponding market segment. This information is directly related to the strategy's objectives on which the allocation constraint is based.
 - Maximum Weight column is editable for any market segments and provides the maximum objective for the corresponding market segment
 - Fixed Objective column is editable for any market segments and provides an indication about whether the Objective Weight must be taken as a fixed value or not.
 - Severity column is editable for any market segment and provides the severity's constraint for the corresponding market segment.
2. Modify the value of the editable fields that must be updated.
 Depending on your selections, it is possible that values of other fields are automatically updated by the system (default values). It is also possible that available values in the drop-down fields are different (filter).
 3. Click **Save** to save your modifications.
 The system checks for errors and warnings. If errors are found, you must resolve the displayed errors and then, click **Save** again to proceed with the saving of your modifications. If warnings are found, you can bypass them (without resolving them) by clicking immediately again on **Save** to save your modifications.
 If no errors are found or warnings are bypassed, the allocation constraint is updated. It is displayed in the list of existing allocation constraints with its updated data.
Note: If the fields related to the Description section are updated, the Description column will first need the execution of pre-computed data initiated by the rule base engine. Otherwise, the value of this column in the user's selected language might not correspond to the newly defined value. Refer to the *Triple'A Plus Web TSL Operating Guide* for more information about the pre-computed data and rule base engine.
 4. (Optional) Abort the update and cancel all your modifications by clicking **Cancel**.
 The allocation constraint is not updated. It is displayed in the list of existing allocation constraints as it was before starting the update.

30.1.3 Deleting existing allocation constraints

You must first display the list of existing allocation constraints (see section [Viewing existing associated allocation constraints](#) for the details), and you must have deletion rights on the constraint. For more details, refer to the *Triple'A Plus Web Packaging Reference Guide*.

To delete an existing allocation constraint associated with a portfolio:

1. In the list of existing allocation constraints, click on the **Delete** icon of the allocation constraint to delete. (For more information about icons, see section [Icons, fields, and links](#).)
 The confirmation message "Are you sure to delete this allocation constraint?" is displayed.
2. Confirm your decision to delete the constraint by clicking **OK**.
 The allocation constraint is deleted and removed from the display.
3. (Optional) Abort the deletion by clicking **Cancel**.
 The allocation constraint is not deleted and is still displayed in the list of existing allocation constraints.

30.1.4 Copying existing allocation constraints

You must first display the list of existing allocation constraints (see section [Viewing existing associated allocation constraints](#) for the details).

To copy an existing allocation constraint associated with a portfolio:

1. In the list of existing allocation constraints, click on the **Copy** icon of the allocation constraint to copy. (For more information about icons, see section [Icons, fields, and links.](#))

Details of the selected allocation constraint are displayed in the following sections:

- The Description section contains the following information:
 - **English Description** field is editable and provides the constraint's description in English. It is in fact a denomination, in English, associated with the constraint (*entity model_constraint*).
 - **French Description** field is editable and provides the constraint's description in French. It is in fact a denomination, in French, associated with the constraint (*entity model_constraint*).
 - **German Description** field is editable and provides the constraint's description in German. It is in fact a denomination, in German, associated with the constraint (*entity model_constraint*).
 - The Definition section contains the following information:
 - **Portfolio** field is not editable and provides the code and name of associated portfolio.
 - **Begin Date** field is editable and provides the begin date of the allocation constraint.
 - **End Date** field is editable and provides the end date of the allocation constraint. It is the end date of its modelling constraint set (*entity model_constraint*).
 - The Objectives section contains the following information related to the modelling constraint elements (*entity model_constraint_elt*) and is displayed in a tree view:
 - Market Segment column is not editable and provides the denomination of the associated market segment.
 - Minimum Weight column is editable for any market segment and provides the minimum objective for the corresponding market segment.
 - Objective Weight column is not editable and provides the objective with its margins for the corresponding market segment. This information is directly related to the strategy's objectives on which the allocation constraint is based.
 - Maximum Weight column is editable for any market segment and provides the maximum objective for the corresponding market segment.
 - Fixed Objective column is editable for any market segment and provides an indication about whether the Objective Weight must be taken as a fixed value or not.
 - Severity column is editable for any market segment and provides the severity's constraint for the corresponding market segment.
2. Modify the value of the editable fields, especially the **Begin Date** field.
 Depending on your selections, it is possible that values of other fields are automatically updated by the system (default values). It is also possible that available values in the drop-down fields are different (filter).
 3. Click **Save** to save the completed allocation constraint's details.

The system checks for errors and warnings. If errors are found, you must resolve the displayed errors and then, click **Save** again to proceed with the saving of your input. If warnings are found, you can bypass them (without resolving them) by clicking immediately again on **Save** to save your input.

If no errors are found or warnings are bypassed, the allocation constraint is created. It is displayed in the list of existing allocation constraints with its data.

Note: If the fields related to the Description section are defined, the Description column will first need the execution of pre-computed data initiated by the rule base engine. Otherwise, the value of this column in the user's selected language will not correspond to the newly defined value. Refer to the *Triple'A Plus Web TSL Operating Guide* for more information about the pre-computed data and rule base engine.

4. (Optional) Abort the copy by clicking **Cancel**.

The allocation constraint is not created. The list of existing allocation constraints is displayed as it was before starting the copy.

30.1.5 Viewing existing associated exclusion constraints

You must have access rights to view the menu **Administration** and its command **Portfolio**. In addition, you must have access rights on the portfolio. For more information about the security of this menu and its subcommands, refer to the *Triple'A Plus Web Packaging Reference Guide*.

To view an existing exclusion constraint associated with a portfolio:

1. Initiate a search on portfolios by clicking on the command **Administration->Portfolio** (or directly on the menu **Administration**) under the **Portfolio Analysis** tab.

A search screen on portfolios is displayed.

2. Define the search criteria and execute the search. For more information, see section [Searching a business object with Search or Advanced Search icon](#).

Matching records of portfolios, on which you have access rights, are displayed. The first column of the results contains a **Details** icon for each retrieved record. (For more information about icons, see section [Icons, fields, and links](#)).

Note: Without matching records, it is impossible to continue.

3. Click on the **Details** icon of the portfolio in which you want to see its associated exclusion constraints.

The portfolio administration screen is displayed under the **Constraints** tab. Existing associated exclusion constraints are retrieved and displayed in a list immediately below the list of existing associated allocation constraints (see section [Viewing existing associated allocation constraints](#)).

The list of existing associated exclusion constraints contains the following information:

- Modify column provides an **Edit** icon to modify the exclusion constraint as described in section [Updating existing exclusion constraint](#). The **Edit** icon is only displayed if you have update rights on the constraint (see *Triple'A Plus Web Packaging Reference Guide* for more details).
- Delete column provides a **Delete** icon to delete the exclusion constraint as described in section [Deleting existing exclusion constraint](#). The **Delete** icon is only displayed if you have deletion rights on the constraint (see *Triple'A Plus Web Packaging Reference Guide* for more details).
- View column provides a **Details** icon to display all the details of the exclusion constraint in a pop-up window.
- Description column is not editable and provides a description of the exclusion constraint in the language selected in the user's preferences. It is in fact a translated denomination related to its modelling constraint element (*entity*

model_constr_elt) if this value is defined (not empty). Otherwise, it is the translated denomination related to its modelling constraint set (*entity model_constraint*).

- Instrument column is not editable and provides the denomination of the associated instrument with the possibility to display the instrument details in a pop-up window by clicking on the **Details** icon.
- Begin on column provides the begin date of the exclusion constraint.
- End on column is not editable and provides the end date of the exclusion constraint. If the end date of its modelling constraint element (*entity model_constr_elt*) is defined (not empty), its value is used for display. Otherwise, it is the end date of its modelling constraint set (*entity model_constraint*).
- Quantity column is not editable and provides the units (in quantity) of the associated instrument to exclude from the investment mandate.
- Treatment column is not editable and provides the constraint's treatment to apply on the exclusion constraint.
- Severity column is not editable and provides the severity's constraint to apply on the exclusion constraint.

Only the exclusion constraints corresponding to the filter defined by the selected radio button are displayed. The radio buttons are:

- **All constraints:** All retrieved exclusion constraints are displayed and grouped by the begin date.
- **All active constraints:** Only the active exclusion constraint is displayed (refer to the *Triple'A Plus Web Packaging Reference Guide* for details about active modelling constraints). It is the default selection made by the system. No groupings are done for that view.
- **All inactive constraints:** Only the inactive exclusion constraints are displayed and grouped by begin date (see the *Triple'A Plus Web Packaging Reference Guide* for details about inactive modelling constraints).

4. (Optional) Click on the **Details** icon of an exclusion constraint to view all its details

Details of the selected exclusion constraint are displayed in a pop-up window in the Details section, which contains the following information:

- **Portfolio** field is not editable and provides the code and name of the associated portfolio.
- **Instrument** field is not editable and provides the code and denomination of the associated instrument.
- **Begin Date** field is not editable and provides the begin date of the exclusion constraint.
- **End Date** field is not editable and provides the end date of the exclusion constraint. If the end date of its modelling constraint element (*entity model_constr_elt*) is defined (not empty), its value is used for display. Otherwise, it is the end date of its modelling constraint set (*entity model_constraint*).
- **Quantity** field is not editable and provides the units (in quantity) of the associated instrument to exclude from the investment mandate.
- **Treatment** field is not editable and provides the constraint's treatment to apply on the exclusion constraint.
- **Severity** field is not editable and provides the severity's constraint to apply on the exclusion constraint.
- **Description** field is not editable and provides a description of the exclusion constraint in the language selected in the user's preferences. It is in fact a translated denomination related to its modelling constraint element (*entity model_constr_elt*) if this value is defined (not empty). Otherwise, it is the translated denomination related to its modelling constraint set (*entity model_constraint*).

30.1.6 Creating new exclusion constraints

You must first display the list of existing exclusion constraints (see section [Viewing existing associated exclusion constraints](#) for the details).

To create an exclusion constraint associated with a portfolio:

1. Under the list of existing exclusion constraints, click **Create Exclusion Constraint**.

Details of the new exclusion constraint to create are displayed in the following sections:

- The Description section contains the following information:
 - **English Description** field is editable and provides the constraint's description in English. It is in fact a denomination, in English, associated with the constraint (*entity model_constr_elt*).
 - **French Description** field is editable and provides the constraint's description in French. It is in fact a denomination, in French, associated with the constraint (*entity model_constr_elt*).
 - **German Description** field is editable and provides the constraint's description in German. It is in fact a denomination, in German, associated with the constraint (*entity model_constr_elt*).
- The Definition section contains the following information:
 - **Portfolio** field is not editable and provides the code and name of the associated portfolio.
 - **Instrument** field provides the code and denomination of the associated instrument. Only the code is editable, the denomination is automatically updated as soon as a code is defined.
 - **Begin Date** field is editable and provides the begin date of the exclusion constraint.
 - **End Date** field is editable and provides the end date of the exclusion constraint. It is the end date of its modelling constraint element (*entity model_constr_elt*).
 - **Quantity** field is editable and provides the units (in quantity) of the associated instrument to exclude from the investment mandate.
 - **Treatment** field is editable and provides the constraint's treatment to apply on the exclusion constraint.
 - **Severity** field is editable and provides the severity's constraint to apply on the exclusion constraint.

2. Complete the values in the editable fields.

Depending of your selections, it is possible that values of other fields are automatically updated by the system (default values). It is also possible that available values in the drop-down fields are different (filter).

3. Click **Create** to save the completed details of the exclusion constraint.

The system checks for errors and warnings. If errors are found, you must resolve the displayed errors and then, click **Create** again to proceed with the saving of your input. If warnings are found, you can bypass them (without solving them) by clicking immediately again on **Create** to save your input.

If no errors are found or warnings are bypassed, the exclusion constraint is created. It is displayed in the list of existing exclusion constraints with its data.

Note: If the fields related to the Description section are defined, the Description column will first need the execution of pre-computed data initiated by the rule base engine. Otherwise, the value of this column in the user's selected language will not correspond to the newly defined value. Refer to the *Triple'A Plus Web TSL Operating Guide* for more information about the pre-computed data and the rule base engine.

4. (Optional) Abort the creation by clicking on **Cancel**.

The exclusion constraint is not created. The list of existing exclusion constraint is displayed as it was before starting the creation.

30.1.7 Updating existing exclusion constraints

You must first display the list of existing exclusion constraints (see section [Viewing existing associated exclusion constraints](#) for the details) and you must have update rights on the constraint (refer to the *Triple'A Plus Web Packaging Reference Guide* for more details).

To update an existing exclusion constraint associated with a portfolio:

1. In the list of existing exclusion constraints, click on the **Edit** icon of the exclusion constraint to update. (For more information about icons, see section [Icons, fields, and links](#).)

Details of the selected exclusion constraint are displayed in the following sections:

- The Description section contains the following information:
 - **English Description** field is editable and provides the constraint's description in English. It is in fact a denomination, in English, associated with the constraint (*entity model_constr_elt*).
 - **French Description** field is editable and provides the constraint's description in French. It is in fact a denomination, in French, associated with the constraint (*entity model_constr_elt*).
 - **German Description** field is editable and provides the constraint's description in German. It is in fact a denomination, in German, associated with the constraint (*entity model_constr_elt*).
- The Definition section contains the following information:
 - **Portfolio** field is not editable and provides the code and name of the associated portfolio.
 - **Instrument** field is not editable and provides the code and denomination of the associated instrument.
 - **Begin Date** field is not editable and provides the begin date of the exclusion constraint.
 - **End Date** field is editable and provides the end date of the exclusion constraint. If the end date of its modelling constraint element (*entity model_constr_elt*) is defined (not empty), its value is used for display. Otherwise, it is the end date of its modelling constraint set (*entity model_constraint*) that is used.
 - **Quantity** field is editable and provides the units (in quantity) of associated instrument to exclude from the investment mandate.
 - **Treatment** field is editable and provides the constraint's treatment to apply on the exclusion constraint.
 - **Severity** field is editable and provides the severity's constraint to apply on the exclusion constraint.

2. Modify the value of the editable fields that must be updated.

Depending of your selections, it is possible that values of other fields are automatically updated by the system (default values). It is also possible that available values in the drop-down fields are different (filter).

3. Click **Save** to save your modifications.

The system checks for errors and warnings. If errors are found, you must resolve the displayed errors and then, click **Save** again to proceed with the saving of your

modifications. If warnings are found, you can bypass them (without resolving them) by clicking immediately again on **Save** to save your modifications.

If no errors are found or warnings are bypassed, the exclusion constraint is updated. It is displayed in the list of existing exclusion constraints with its updated data.

Note: If the fields related to the Description section are updated, the Description column will first need the execution of pre-computed data initiated by the rule base engine. Otherwise, the value of this column in user's selected language might not correspond to the new defined value. Refer to the *Triple'A Plus Web TSL Operating Guide* for more information about the pre-computed data and the rule base engine.

4. (Optional) Abort the update and cancel all your modifications by clicking on **Cancel**.
The exclusion constraint is not updated. The list of existing exclusion constraints is displayed as it was before starting the update.

30.1.8 Deleting existing exclusion constraints

You must first display the list of existing exclusion constraints (see section [Viewing existing associated exclusion constraints](#) for details) and you must have deletion rights on the constraint. For more details, refer to the *Triple'A Plus Web Packaging Reference Guide*.

To delete an existing exclusion constraint associated with a portfolio:

1. In the list of existing exclusion constraints, click on the **Delete** icon of the exclusion constraint to delete. (For more information about icons, see section [Icons, fields, and links](#).)
The confirmation message "Are you sure to delete this exclusion constraint?" is displayed.
2. Confirm your decision to delete the constraint by clicking **OK**.
The exclusion constraint is deleted and removed from the display.
3. (Optional) Abort the deletion by clicking on **Cancel**.
The exclusion constraint is not deleted and is still displayed in the list of existing exclusion constraints.

30.1.9 Viewing existing related direct strategy links

You must have access rights to view the menu **Administration** and its command **Portfolio**. In addition, you must have access rights on the portfolio. For more information about the security of this menu and its subcommands, refer to the *Triple'A Plus Web Packaging Reference Guide*.

To view a direct strategy link related to a portfolio:

1. Initiate a search on portfolios by clicking on the command **Administration->Portfolio** (or directly on the menu **Administration**) under the **Portfolio Analysis** tab.
A search screen on portfolios is displayed.
2. Define the search criteria and execute the search. For more information, see section [Searching a business object with Search or Advanced Search icon](#).
Matching records of portfolios, on which you have access rights, are displayed. The first column of the results contains a **Details** icon for each retrieved record. (For more information about icons, see section [Icons, fields, and links](#).)
Note: Without matching records, it is impossible to continue.
3. Click on the **Details** icon of the portfolio in which you want to see its related direct strategy links.

The portfolio administration screen is displayed under the **Constraints** tab. Existing associated allocation constraints and exclusion constraints are retrieved and displayed in lists immediately below the tab (see sections [Viewing existing associated allocation constraints](#) and [Viewing existing associated exclusion constraints](#)).

4. Click on the **Strategy Links** tab.

The portfolio administration screen is displayed under the **Strategy Links** tab. Existing related direct strategy links, on which the user has access rights, are retrieved and displayed in a list immediately below the tab.

The list of existing related direct strategy links contains the following information:

- Modify column provides an **Edit** icon to modify the strategy links as described in section [Updating existing direct strategy link](#). The **Edit** icon is only displayed if the user has update rights on the link too (see *Triple'A Plus Web Packaging Reference Guide* for more details).
- Delete column provides a **Delete** icon to delete the strategy link as described in section [Deleting existing direct strategy link](#). The **Delete** icon is only displayed if the user has deletion rights on the link too (see *Triple'A Plus Web Packaging Reference Guide* for more details).
- View column provides a **Details** icon to display all details of the strategy link in a pop-up window.
- Strategy column is not editable and provides the denomination of the associated strategy with the possibility to display the strategy details in a pop-up window by clicking on the **Details** icon. Strategy details are exactly the same as described in the section [Viewing details of strategy](#), except that no icons are displayed, all buttons are disabled, and the list of available histories is replaced by the objectives of the active history (current objectives).
- Begin on column is not editable and provides the begin date of the strategy link.
- End on column is not editable and provides the end date of the strategy link.
- Nature column is not editable and provides the link's nature of the strategy link.
- Priority column is not editable and provides the link's priority of the strategy link.

Only the strategy links that correspond to the filter defined by the selected radio button are displayed. The radio buttons are:

- **All strategy link:** All retrieved strategy links are displayed.
- **All active strategy links:** Only the active strategy links are displayed (see the *Triple'A Plus Web Packaging Reference Guide* for details about active strategy links). It is the default selection made by the system.
- **All inactive strategy links:** Only the inactive strategy links are displayed (see the *Triple'A Plus Web Packaging Reference Guide* for details about inactive strategy links).

5. (Optional) Click on the **Details** icon of a strategy link to view all its details.

Details of the selected link are displayed in a pop-up window and are divided into the following sections:

- The Details section contains the following information:
 - **Portfolio** field is not editable and provides the code and name of the associated portfolio.
 - **Strategy** field is not editable and provides the code and denomination of the associated strategy.
 - **Nature** field is not editable and provides the link's nature of the strategy link.
 - **Priority** field is not editable and provides the link's priority of the strategy link.
 - **Begin Date** field is not editable and provides the begin date of the strategy link.

- **End Date** field is not editable and provides the end date of the strategy link.
- **Data Security Profile** field is not editable and provides the code of the first Data Security Profile that is used to grant access rights on the strategy link for users.
- **Additional Data Security Profile** field is not editable and provides the code of the second Data Security Profile that is used to grant access rights on the strategy link for third parties.
- The Associated Strategy section contains the same information as described in section [Viewing details of strateg](#), except that no icons are displayed, all buttons are disabled, and the list of available histories is replaced by the objectives of the active history (current objectives). For details about active strategy histories, refer to the *Triple'A Plus Web Packaging Reference Guide*.

30.1.10 Creating new direct strategy links

You must first display the list of existing strategy links (see section [Viewing existing related direct strategy links](#) for the details).

To create a new direct strategy link related to a portfolio:

1. Under the list of existing strategy links, click **Create Link**.

Details of the new strategy link to create are displayed in the following sections:

- The Definition section contains the following information:
 - **Portfolio** field is not editable and provides the code and name of the associated portfolio.
 - **Strategy** field provides the code and denomination of the associated strategy. Only the code is editable; the denomination is automatically updated as soon as a code is defined.
 - **Nature** field is editable and provides the link's nature of the strategy link.
 - **Priority** field is editable and provides the link's priority of the strategy link.
 - **Begin Date** field is editable and provides the begin date of the strategy link.
 - **End Date** field is editable and provides the end date of the strategy link.
 - **Data Security Profile** field is editable and provide the code of the first Data Security Profile that is used to grant access rights on the strategy link for users.
 - **Additional Data Security Profile** field is editable and provides the code of the second Data Security Profile that is used to grant access rights on the strategy link for third parties.
 - The Associated Strategy section is not editable but is automatically updated as soon as a code is defined in the **Strategy** field mentioned above. It contains the same information as described in section [Viewing details of strateg](#), except that no icons are displayed, all buttons are disabled, and the list of available histories is replaced by the objectives of the active history (current objectives). For details about active strategy histories, refer to the *Triple'A Plus Web Packaging Reference Guide*.
2. Complete the value of the editable fields.
Depending of your selections, it is possible that values of other fields are automatically updated by the system (default values). It is also possible that available values in the drop-down fields are different (filter).
 3. Click **Create** to save the completed details of the strategy link.

The system checks for errors and warnings. If errors are found, you must resolve the displayed errors and then, click **Create** again to proceed with the saving of your input. If warnings are found, you can bypass them (without resolving them) by immediately clicking again on **Create** to save your input.

If no errors are found or warnings are bypassed, the strategy link is created. It is displayed in the list of existing strategy links with its data.

Note: If the fields related to the Description section are updated, the Description column will first need the execution of pre-computed data initiated by the rule base engine. Otherwise, the value of this column in user's selected language might not correspond to the new defined value. Refer to the *Triple'A Plus Web TSL Operating Guide* for more information about the pre-computed data and the rule base engine.

4. (Optional) Abort the creation by clicking on **Cancel**.

The strategy link is not created. The list of existing strategy links is displayed as it was before starting the creation.

30.1.11 Updating existing direct strategy links

You must first display the list of existing strategy links (see section [Viewing existing related direct strategy links](#) for the details) and you must have update rights on the link (see *Triple'A Plus Web Packaging Reference Guide* for more details).

To update an existing direct strategy link related to a portfolio:

1. In the list of existing strategy links, click on the **Edit** icon of the strategy link to update. (For more information about icons, see section [Icons, fields, and links](#).)

Details of the selected strategy link are displayed in the following sections:

- The Definition section contains the following information:
 - **Portfolio** field is not editable and provides the code and name of the associated portfolio.
 - **Strategy** field is not editable and provides the code and denomination of the associated strategy.
 - **Nature** field is not editable and provides the link's nature of the strategy link.
 - **Priority** field is editable and provides the link's priority of the strategy link.
 - **Begin Date** field is not editable and provides the begin date of the strategy link.
 - **End Date** field is editable and provides the end date of the strategy link.
 - **Data Security Profile** field is editable and provides the code of the first Data Security Profile that is used to grant access rights on the strategy link for users.
 - **Additional Data Security Profile** field is editable and provides the code of the second Data Security Profile that is used to grant access rights on the strategy link for third parties.
- The Associated Strategy section contains the same information as described in the section [Viewing details of strategies](#), except that no icons are displayed, all buttons are disabled, and the list of available histories is replaced by the objectives of the active history (current objectives). For details about active strategy histories, refer to the *Triple'A Plus Web Packaging Reference Guide*.

2. Modify the value of the editable fields that must be updated.

Depending of your selections, it is possible that values of other fields are automatically updated by the system (default values). It is also possible that available values in the drop-down fields are different (filter).

3. Click **Save** to save your modifications.

The system checks for errors and warnings. If errors are found, you must resolve the displayed errors and then, click **Save** again to proceed with the saving of your modifications. If warnings are found, you can bypass them (without resolving them) by clicking immediately again on **Save** to save your modifications.

If no errors are found or warnings are bypassed, the strategy link is updated. It is displayed in the list of existing strategy links with its updated data.

4. (Optional) Abort the update and cancel all your modifications by clicking on **Cancel**.

The strategy link is not updated. It is displayed in the list of existing strategy links as it was before starting the update.

30.1.12 Deleting existing direct strategy links

You must first display the list of existing strategy links (see section [Viewing existing related direct strategy links](#) for the details) and you must have deletion rights on the link (see *Triple'A Plus Web Packaging Reference Guide* for more details).

To delete an existing direct strategy link related to a portfolio:

1. In the list of existing strategy links, click on the **Delete** icon of the strategy link to delete. (For more information about icons, see section [Icons, fields, and links](#).)

The confirmation message "Are you sure to delete this strategy link?" is displayed.

2. Confirm your decision to delete the link by clicking **OK**.

The strategy link is deleted and removed from the display.

3. (Optional) Abort the deletion by clicking on **Cancel**.

The strategy link is not deleted and is still displayed in the list of existing strategy links.

30.2 Administration of Strategies

Administration of strategies gives the possibility to view the strategy's definition (attributes) and to administrate its histories with corresponding objectives or compositions. For explanations about the implementation, refer to the *Triple'A Plus Web Packaging Reference Guide*.

30.2.1 Viewing details of strategies

You must be allowed to view the menu **Administration** and its command `Strategy`. In addition, you must have access rights on the strategy. For more information about the security of this menu and its subcommands, refer to the *Triple'A Plus Web Packaging Reference Guide*.

To view details of a strategy:

1. Initiate a search on strategies by clicking on the command `Strategy` of the menu **Administration** under the **Portfolio Analysis** tab.

A search screen on strategies is displayed.

2. Define the search criteria and execute the search. For more information, see section [Searching a business object with Search or Advanced Search icon](#).

Matching records of strategies, on which you have access rights, are displayed. The first column of the results contains an **Edit** icon, which is displayed only if you have update rights on the corresponding strategy (see *Triple'A Plus Web Packaging Reference Guide*).

for more details). The second column contains a **Details** icon for each retrieved record. (For more information about icons, see section [Icons, fields, and links](#))

Note: Without matching records, it is impossible to continue.

3. Click on the **Edit** or **Details** icon of the strategy in which you want to see its details.

The strategy administration screen is displayed with one of the following possible modes:

- View mode: This mode is activated when the **Details** icon was selected. In this mode, the strategy's details are only viewable and cannot be modified.
- Update mode: This mode is activated when the **Edit** icon was selected. In this mode, the strategy's details can be modified.

The screen is divided into the following modules: Strategy, History, and Objectives.

The Strategy module is further divided into the following sections:

- The Identification section contains the following information:
 - **Code** field is not editable in any mode and provides the strategy's code.
 - **Name** field is not editable in any mode and provides the strategy's name.
 - **Denomination** field is not editable in any mode and provides the strategy's denomination in the language selected in the user's preferences.
- The Nature & Type section contains the following information:
 - Nature is not editable in any mode and provides the strategy's nature.
 - Sub-Nature is not editable in any mode and provides the strategy's sub-nature.
 - Type is not editable in any mode and provides the denomination of strategy's type. Denomination is displayed in the language selected in the user's preferences.
- The Strategy section contains specific information depending of the strategy's nature. All fields are not editable and are described in the *Triple'A Plus Web Packaging Reference Guide*.

The History module displays the list of existing strategy histories. Only the five most recent histories, based on their begin date, are displayed. The list contains the following information, which is not editable:

- Modify column provides an **Edit** icon to modify the corresponding objectives as described in section [Updating an existing strategy history and its objectives](#) or to create a new history with objectives based on the corresponding history as described in section [Copying an existing strategy history and its objectives](#). The Modify column with its **Edit** icons is displayed only if the user has selected the strategy's details in the Update mode.
- View column is not editable and provides a **Details** icon to display the corresponding objectives in the Objectives modules (described below).
- Begin on column is not editable and provides the begin date of the strategy history.
- End on column is not editable and provides the end date of the strategy history.
- Description column is not editable and provides the denomination of the strategy history in the language selected in the user's preferences.

The Objectives module displays the objectives corresponding to the selected history in the History module. By default, the system automatically selects the active strategy history (see the *Triple'A Plus Web Packaging Reference Guide* for details about active strategy history). If the active history is not available, the Objectives module is not displayed until the user selects a history. When displayed, it contains the following information:

- **Begin Date** field is not editable and provides the begin date of the related strategy history.

- **End Date** field is not editable and provides the end date of the related strategy history.
 - **Modify history** button gives the possibility to modify the objectives displayed in the table (see section [Updating an existing strategy history and its objectives](#)). In View mode, this button is not available. In Update mode, it is available by default for the objectives related to the active strategy history.
 - **Copy history** button gives the possibility to create a new history with objectives based on the objectives displayed in the table (see section [Copying an existing strategy history and its objectives](#)). In View mode, this button is not available. In Update mode, it is available by default for the objectives related to the active strategy history.
 - Market Segment column is not editable and provides the denomination of the associated market segment.
 - Priority column is not editable and provides the objective's priority for the corresponding market segment.
 - Weight column is not editable and provides the objective's weight for the corresponding market segment.
 - Margin column is not editable and provides the objective's margin for the corresponding market segment.
 - Severity column is not editable and provides the objective's severity for the corresponding market segment.
 - Bench Type column is not editable and provides the type of objective's benchmark for the corresponding market segment.
 - Bench Object column is not editable and provides the code of the objective's benchmark for the corresponding market segment.
4. (Optional) Display objectives of another strategy history by clicking on the corresponding **View** icon (or **Edit** icon, if available) in the list of existing strategy histories.

The Objectives module is refreshed to display the objectives corresponding to the selected strategy history. If the selection was made with the **Edit** icon, the buttons **Modify history** and **Copy history** are available. Otherwise, they are not available.

30.2.2 Updating an existing strategy history and its objectives

You must first display the list of existing strategy histories in Update mode (see section [Viewing details of strateg](#) for details). This means that you must have update rights on the related strategy (see *Triple'A Plus Web Packaging Reference Guide* for more details).

To update an existing history and its objectives related to a strategy:

1. (Optional) In the list of existing strategy histories, click on the **Edit** icon of the history whose objectives require modifications. This action is necessary only if it is not the active strategy history's objectives that require modification. More details about active strategy history can be found in the *Triple'A Plus Web Packaging Reference Guide*.

The Objectives module is refreshed to display the objectives corresponding to the selected strategy history (for details about the Objectives module, see section [Viewing details of strateg](#)). The button **Modify history** is available.

2. Click **Modify history** to start modifying the objectives.

The Objectives module is refreshed and gives the possibility to modify the objectives corresponding to the selected strategy history. It contains the following information:

- **Begin Date** field is not editable and provides the begin date of the related strategy history.
- **End Date** field is editable and provides the end date of the related strategy history.

- **Save** button gives the possibility to save the modifications made on the strategy history and its objectives.
 - Market Segment column is not editable and provides the denomination of the associated market segment.
 - Priority column is editable for any market segment and provides the objective's priority for the corresponding market segment.
 - Weight column is editable only for market segments at the lowest levels and provides the objective's weight for the corresponding market segment.
 - Margin column is editable for any market segment and provides the objective's margin for the corresponding market segment.
 - Severity column is editable for any market segment and provides the objective's severity for the corresponding market segment.
 - Bench Type column is editable for any market segment and provides the type of the objective's benchmark for the corresponding market segment.
 - Bench Object column is editable for any market segment and provides the code of the objective's benchmark for the corresponding market segment.
3. Modify the value of the editable fields and columns that must be updated.
- Depending of your selections, it is possible that values of other fields or columns are automatically updated by the system (default values). It is also possible that available values in the drop-down fields are different (filter).
4. Click **Save** to save your modifications.
- The system checks for errors and warnings. If errors are found, you must resolve the displayed errors and then, click **Save** again to proceed with the saving of your modifications. If warnings are found, you can bypass them (without resolving them) by clicking immediately again on **Save** to save your modifications.
- If no errors are found or warnings are bypassed, the strategy history and its objectives are updated. The list of existing strategy histories is refreshed and the Objectives module is displayed along with the objectives of the active strategy history. If no active strategy histories exist, the Objectives module is not displayed. More details about active strategy history can be found in the *Triple'A Plus Web Packaging Reference Guide*.
5. (Optional) Abort the update and cancel all your modifications by clicking on any icons in the list of existing strategy histories.
- The strategy history and its objectives are not updated.

30.2.3 Copying an existing strategy history and its objectives

You must first display the list of existing strategy histories in Update mode (see section [Viewing details of strateg](#) for details). This means that you must have update rights on the related strategy (see *Triple'A Plus Web Packaging Reference Guide* for more details).

To copy an existing history and its objectives related to a strategy:

1. (Optional) In the list of existing strategy histories, click on the **Edit** icon of the history whose objectives must be copied. This action is necessary only if it is not the active strategy history's objectives that must be copied. More details about active strategy history can be found in the *Triple'A Plus Web Packaging Reference Guide*.
- The Objectives module is refreshed to display the objectives corresponding to the selected strategy history (see section [Viewing details of strateg](#) for details of the Objectives module). The button **Copy history** is available.
2. Click **Copy history** to start copying the objectives.
- The Objectives module is refreshed to give the possibility to modify the objectives corresponding to the strategy history to copy. It contains the following information:

- **Begin Date** field is editable and provides the begin date of the related strategy history.
 - **End Date** field is editable and provides the end date of the related strategy history.
 - **Save** button gives the possibility to save the input made on the strategy history and its objectives.
 - Market Segment column is not editable and provides the denomination of the associated market segment.
 - Priority column is editable for any market segments and provides the objective's priority for the corresponding market segment.
 - Weight column is editable only for market segments at the lowest levels and provides the objective's weight for the corresponding market segment.
 - Margin column is editable for any market segment and provides the objective's margin for the corresponding market segment.
 - Severity column is editable for any market segment and provides the objective's severity for the corresponding market segment.
 - Bench Type column is editable for any market segment and provides the type of the objective's benchmark for the corresponding market segment.
 - Bench Object column is editable for any market segment and provides the code of the objective's benchmark for the corresponding market segment.
3. Modify the value of the editable fields and columns that must be updated.
 Depending of your selections, it is possible that values of other fields or columns are automatically updated by the system (default values). It is also possible that available values in the drop-down fields are different (filter).
 4. Click **Save** to save your modifications.
 The system checks for errors and warnings. If errors are found, you must resolve the displayed errors and then, click **Save** again to proceed with the saving of your input. If warnings are found, you can bypass them (without resolving them) by clicking immediately again on **Save** to save your input.
 If no errors are found or warnings are bypassed, the strategy history and its objectives are created. The list of existing strategy histories is refreshed and the Objectives module is displayed along with the objectives of the active strategy history. If no active strategy histories exist, the Objectives module is not displayed. More details about active strategy history can be found in the *Triple'A Plus Web Packaging Reference Guide*.
 5. (Optional) Abort the copy by clicking on any icons in the list of existing strategy histories.
 The strategy history and its objectives are not created.

31 Relationship Manager Profile

As indicated by its name, the Relationship Manager Profile is dedicated to relationship managers. Its goal is to present information in the Web User Interface (WUI) in a way that best matches the activity of this type of user.

Most of the Triple'A Plus functions and the information in this guide are based on the Default Profile; this chapter will describe the items that are specific to the Relationship Manager Profile.

31.1 Quick Select of Client, Portfolio, Portfolio Lists, and Managers

For the choice of portfolios to analyse, the Relationship Manager Profile contains a quick access toolbar at the top of the screen:

Context for Relationship Manager Profile

31.2 Identification

The goal of the **Identification** tab is to display a set of information to the user in a very synthetic way so that it is easy to read and it matches the relationship managers' business.

31.2.1 Context

In the context, you can define the parameters for the analysis:

1. Select a client, a portfolio, a list of portfolios, a manager, an advisor, or the result of a query by using the quick access toolbar (see section [Quick Select of Client, Portfolio, Portfolio Lists, and Managers](#)).
2. Complete the fields in the context as follows:

Item	Selection	Description
Date	<date>	Date that the analysis is based on. The default value is the current date.
Currency	<currency code>	Currency that the analysis is to be shown in. If the Analysis Scope has been set to Portfolio, Client, Manager, Advisor, or Portfolio List, the currency will default to the currency of the selected item. If the Analysis Scope has been set to All or Query, the currency will default to the system currency.
Load Hierarchy	No From Parent	If the From Parent option is selected, the portfolio's child portfolios will be included in the analysis. This will default to From Parent.
Min Status Max Status	<all statuses from Cancelled through to Post Accountant>	The minimum and maximum statuses of the retrieved positions. The default value for both is Accountant.

Item	Selection	Description
Strategy Link	Default Link Forced Link	You can either use the strategies (which are linked to the portfolio) or select a benchmark individually. • Default Link: Use the strategies, which are linked to the portfolio. The links can be restricted by their link nature. • Forced Link: Select a portfolio, an instrument, or a strategy of nature Model Portfolio, Index, or Benchmark as benchmark.

3. Click **Apply** button to start the analysis.

31.2.2 Result

The main screen of the **Identification** tab is further divided into sub-sections that are described in the following:

- [Scope Summary](#)
- [Summary by Portfolio](#)
- [Overview](#)

31.2.2.1 Scope Summary

The table displays aggregated information about the scope selected in the context (e.g., client, portfolio, manager, list, etc). The positions of all portfolios are merged together.

31.2.2.2 Summary by Portfolio

This table shows high-level information about the portfolios, which are included in the analysis scope. One line per portfolio is displayed. For portfolio hierarchies, the child portfolios are shown below their parent portfolios in a tree form.

31.2.2.3 Overview

The overview shows the essential information about the portfolios in the analysis scope. All portfolios are merged together. This part of the screen is composed of the following modules:

- [Performance Summary](#)
- [Portfolio / Client](#)
- [Asset Classes](#)
- [Currencies](#)
- [Regions](#)
- [Sectors](#)
- [Main Position](#)
- [Best Profits](#)
- [Worst Losses](#)
- [Performance One Year](#)
- [Long Term Performance](#)
- [Contact List](#)
- [Tasks](#)

Performance Summary

This table shows the performance analysis for the current year (floating year; that is, from the date of the context minus 1 year until the date in the context).

Portfolio / Client

Gives access to the static data of the portfolio or client (only available if a single portfolio or single client has been selected in the context).

Asset Classes

This bar chart shows the percentage weights per asset class in the portfolio(s) and in the benchmark.

Currencies

This bar chart shows the currency allocation in the portfolio(s) and in the benchmark.

Regions

This bar chart shows the region allocation in the portfolio(s) and in the benchmark.

Sectors

This bar chart shows the sector allocation in the portfolio(s) and in the benchmark.

Main Positions

This table shows the instruments with the highest market values in the portfolio(s).

Best Profits

This table shows the positions with the highest unrealised profits.

Worst Losses

This table shows the positions with the biggest unrealised losses.

Performance One Year

This graphic shows the performance analysis for the current year (floating year; that is, from the date of the context minus 1 year until the date in the context). The returns and cumulative returns of the portfolio(s) and the benchmark are shown per month.

Long Term Performance

This bar chart shows the yearly performance of the portfolio(s) and the benchmark over the last 10 years.

Contact List

This part shows the latest contacts that are related to the portfolio (only available if a single portfolio has been selected in the context). You can create a new contact by using the **Create Contact** button.

Tasks

This part shows the latest tasks that are related to the portfolio (only available if a single portfolio has been selected in the context). You can create a new task by using the **Create Task** button.

31.2.2.4 Tab - All

This tab provides an overview of the positions that are held in the portfolio(s).

By Asset Class / Currency

This matrix shows the asset class / currency allocation. For each combination of asset class and currency, the market value, the weight (with respect to the total market value), and the unrealised profit and loss are displayed.

By Asset Class

This bar chart shows the percentage weights per asset class in the portfolio(s) and in the benchmark.

Positions

This section provides a detailed list of all positions that are held in the portfolio(s).

Clicking on the market value in one of the cells of the By Asset Class / Currency matrix will put a filter on the position lists (i.e., only the positions that belong to the chosen Asset Class / Currency combination are displayed in the list). Clicking on the total market value (bottom-right cell of the matrix) will remove the filter.

31.2.2.5 Tab - Stocks

This tab shows a detailed analysis of the stock positions of the portfolio(s). It is accessible only when at least one stock position is contained in the portfolio(s). You can switch between an analysis by sector or by region when you set the radio button accordingly.

By Sector / Currency

This matrix shows the sector / currency allocation. For each combination of sector and currency, the market value, the weight (with respect to the total market value of stock positions) and the unrealised profit and loss are displayed.

By Sector

This bar chart shows the percentage weights per sector in the portfolio(s) and in the benchmark. The weights are relative to the weight of the stock positions.

By Region / Currency

This matrix shows the region / currency allocation. For each combination of region and currency, the market value, the weight (with respect to the total market value of stock positions) and the unrealised profit and loss are displayed.

By Region

This bar chart shows the percentage weights per region in the portfolio(s) and in the benchmark. The weights are relative to the weight of the stock positions.

Positions

This section provides a detailed list of all stock positions that are held in the portfolio(s).

Clicking on the market value in one of the cells of the matrix will put a filter on the position lists (i.e., only the positions that belong to the chosen combination are displayed in the list). Clicking on the total market value (bottom-right cell of the matrix) will remove the filter.

31.2.2.6 Tab - Fixed Income

This tab shows a detailed analysis of the fixed income positions of the portfolio(s). It is accessible only when at least one fixed income position is contained in the portfolio(s). You can switch between an analysis by type, by region, by rating, by maturity, or by duration when you set the radio button accordingly.

By Type / Currency

This matrix shows the instrument type / currency allocation. For each combination of instrument type and currency, the market value, the weight (with respect to the total market value of fixed income positions), and the unrealised profit and loss are displayed.

By Type

This bar chart shows the percentage weights per instrument type in the portfolio(s) and in the benchmark. The weights are relative to the weight of the fixed income positions.

By Region / Currency

This matrix shows the region / currency allocation. For each combination of region and currency, the market value, the weight (with respect to the total market value of fixed income positions), and the unrealised profit and loss are displayed.

By Region

This bar chart shows the percentage weights per region in the portfolio(s) and in the benchmark. The weights are relative to the weight of the fixed income positions.

By Rating / Currency

This matrix shows the rating / currency allocation. For each combination of rating and currency, the market value, the weight (with respect to the total market value of fixed income positions), and the unrealised profit and loss are displayed.

By Rating

This bar chart shows the percentage weights per rating in the portfolio(s) and in the benchmark. The weights are relative to the weight of the fixed income positions.

By Maturity / Currency

This matrix shows the maturity / currency allocation. For each combination of maturity bucket and currency, the market value, the weight (with respect to the total market value of fixed income positions), and the unrealised profit and loss are displayed.

By Maturity

This bar chart shows the percentage weights per maturity bucket in the portfolio(s) and in the benchmark. The weights are relative to the weight of the fixed income positions.

By Duration / Currency

This matrix shows the maturity / currency allocation. For each combination of duration bucket and currency, the market value, the weight (with respect to the total market value of fixed income positions), and the unrealised profit and loss are displayed.

By Duration

This bar chart shows the percentage weights per duration bucket in the portfolio(s) and in the benchmark. The weights are relative to the weight of the fixed income positions.

Positions

This section provides a detailed list of all fixed income positions that are held in the portfolio(s).

Clicking on the market value in one of the cells of the matrix will put a filter on the position lists (i.e., only the positions that belong to the chosen combination are displayed in the list). Clicking on the total market value (bottom-right cell of the matrix) will remove the filter.

31.2.2.7 Tab - Funds

This tab shows a detailed analysis of the fund positions of the portfolio(s). It is accessible only when at least one fund position is contained in the portfolio(s). You can switch between an analysis by type or by risk when you set the radio button accordingly.

By Type / Currency

This matrix shows the instrument type / currency allocation. For each combination of instrument type and currency, the market value, the weight (with respect to the total market value of funds positions), and the unrealised profit and loss are displayed.

By Type

This bar chart shows the percentage weights per instrument type in the portfolio(s) and in the benchmark. The weights are relative to the weight of the funds positions.

By Risk / Currency

This matrix shows the risk nature / currency allocation. For each combination of risk nature and currency, the market value, the weight (with respect to the total market value of funds positions), and the unrealised profit and loss are displayed.

By Risk

This bar chart shows the percentage weights per risk nature in the portfolio(s) and in the benchmark. The weights are relative to the weight of the funds positions.

Positions

This section provides a detailed list of all funds positions that are held in the portfolio(s).

Clicking on the market value in one of the cells of the matrix will put a filter on the position lists (i.e., only the positions that belong to the chosen combination are displayed in the list). Clicking on the total market value (bottom-right cell of the matrix) will remove the filter.

31.2.2.8 Tab - Derivatives

This tab shows a detailed analysis of the derivatives positions of the portfolio(s). It is accessible only when at least one derivative position is contained in the portfolio(s).

By Type / Currency

This matrix shows the instrument type / currency allocation. For each combination of instrument type and currency, the market value, the weight (with respect to the total market value of derivatives positions), and the unrealised profit and loss are displayed.

By Type

This bar chart shows the percentage weights per instrument type in the portfolio(s) and in the benchmark. The weights are relative to the weight of the derivatives positions.

Positions

This section provides a detailed list of all derivatives positions that are held in the portfolio(s).

Clicking on the market value in one of the cells of the matrix will put a filter on the position lists (i.e., only the positions that belong to the chosen combination are displayed in the list). Clicking on the total market value (bottom-right cell of the matrix) will remove the filter.

31.2.2.9 Tab - Liquidity

This tab shows a detailed analysis of the liquidity positions of the portfolio(s). It is accessible only when at least one liquidity position is contained in the portfolio(s).

By Type / Currency

This matrix shows the instrument type / currency allocation. For each combination of instrument type and currency, the market value, the weight (with respect to the total market value of liquidities positions), and the unrealised profit and loss are displayed.

By Type

This bar chart shows the percentage weights per instrument type in the portfolio(s) and in the benchmark. The weights are relative to the weight of the liquidities positions.

Positions

This section provides a detailed list of all liquidities positions that are held in the portfolio(s).

Clicking on the market value in one of the cells of the matrix will put a filter on the position lists (i.e., only the positions that belong to the chosen combination are displayed in the list). Clicking on the total market value (bottom-right cell of the matrix) will remove the filter.

31.2.2.10 Tab - Other Assets

This tab shows a detailed analysis of the remaining positions of the portfolio(s) (i.e., the positions that do not fall under the classifications of the previous tab screens). It is accessible only when at least one of these positions is contained in the portfolio(s).

By Type / Currency

This matrix shows the instrument type / currency allocation. For each combination of instrument type and currency, the market value, the weight (with respect to the total market value of other asset positions), and the unrealised profit and loss are displayed.

By Type

This bar chart shows the percentage weights per instrument type in the portfolio(s) and in the benchmark. The weights are relative to the weight of the other assets positions.

Positions

This section provides a detailed list of all other assets positions that are held in the portfolio(s).

Clicking on the market value in one of the cells of the matrix will put a filter on the position lists (i.e., only the positions that belong to the chosen combination are displayed in the list). Clicking on the total market value (bottom-right cell of the matrix) will remove the filter.

31.2.2.11 Tab - Future Flows

This tab shows the future flows in the portfolios. The analysis period comprises the next three months from the date in the context.

By Currency / Date

This matrix shows the future flows and future account balances per currency for different future periods (i.e., one week, one month, and three months). All amounts are shown in the respective currency.

By Date / Currency

This bar chart shows the future flows in the various currencies per time bucket. In contrast to the matrix, all amounts are in the analysis (reference) currency.

Flow Details

This table shows the details of the forthcoming flows (such as the value date, the operation types (income, maturity), and the instruments) which generate them.

Column	Properties	Description
Account	Displayed by Default	Cash Account that will be credited / debited
Value Date	Displayed by Default	Expected value date
Deposit	Hidden by Default	Name of the deposit in which the position is held
Execution Date	Hidden by Default	Expected operation date
Accounting Date	Hidden by Default	Expected accounting date
Operation Type	Displayed by Default	Operation type denomination
Instrument	Displayed by Default	Instrument denomination
Instrument Code	Hidden by Default	Identifier of the instrument
Quantity	Displayed by Default	Quantity of the held position that will generate the flow
Price	Displayed by Default	Unitary dividend, interest rate, or redemption rate
Amount	Displayed by Default	Cash amount of the operation
ISIN	Hidden by Default	Instrument's ISIN

For more information about Future Flows function, see section [Future Cash Flow](#).

31.2.2.12 Orders & Operations

List of Orders

This table shows all pending orders for the selected portfolio(s). The minimum status and the maximum status from the context are not used for this display. The content of this display corresponds to the Order Lists function (see section [Order Lists](#)).

Activity Details

This module shows the recent operations in the portfolio(s). The content of this display corresponds to Portfolio Activity function (see section [Portfolio Activity](#)).

32 Portfolio Manager for T24 Profile

As indicated by its name, the Portfolio Manager for T24 Profile is dedicated to managers who use the Triple'A Plus Web interfaced with T24. Its goal is to present information in the Web User Interface (WUI) in a way that best matches the activity of this type of user.

Most of the Triple'A Plus functions and the information in this guide are based on the Default Profile. The following sections in this chapter, however, will describe the items that are specific to the Portfolio Manager for T24 Profile only:

- [Tabs, menus, commands, and subcommands](#)
- [Display of static data](#)
- [Identification](#)
- [Lombard valuation](#)
- [Single Order function](#)
- [Transaction List function](#)
- [Initiate Order](#)
- [Order Session](#)
- [Proposal Generator](#)
- [Elective Corporate Action](#)

32.1 Tabs, menus, commands, and subcommands

A T24 profile in the standard packaging, via automatic profiling, is linked to a specific menu. In comparison to the Default menu, some subcommands are linked to specific T24 profile pages. These differences are on the Analysis, Order Management, and Administration menu.

Tab	Menu	Command	Subcommand	Description
Portfolio Analysis				Standard
	Home			Standard
		Dashboard		Standard
		Notifications & Messages		Standard
			Notifications & Messages	Standard
			New Message	Standard
		Pre-Defined Queries		Standard
		Alerts		Standard
			Private Alerts	Standard
			Public Alerts	Standard
	Analysis			Standard
		Identification		Gives access to additional data of the client from T24.
		Valuation		Standard
		Held Assets		Standard
		Return		Standard
		Performance		Standard
			Global	Standard
			Risk Measures	Standard

Tab	Menu	Command	Subcommand	Description
			Contribution	Standard
			Attribution	Standard
			Intermediate Benchmark Performance Attribution	Standard
		Future Cash Flow		Standard
		Compliance Checking		Standard
		Lombard Valuation		Gives access to the Lombard Valuation function from T24
		Reporting		Standard
			Create Report	Standard
			Existing Report(s)	Standard
	Order Management			Standard
		Create Single Order		Standard
			Security	Standard
			Derivatives	Standard
			Forex	Standard
			Internal Cash Transfer	Creates a new Internal Cash Transfer in the T24 application Fund Transfer.
			Outgoing Payment	Creates a new Outgoing Payment in the T24 application Fund Transfer.
			Deposit	Creates a new deposit for a portfolio in the T24 application Arrangement Architecture.
			Loan	Creates a new loan for a portfolio in the T24 application Arrangement Architecture.

Tab	Menu	Command	Subcommand	Description
		Allocate Order		Standard
		Rebalancing		Standard
		Order Session		Standard
			Create Session	Standard
			Existing Session(s)	Standard
		Order Lists		Standard
			All Orders	Standard
			Orders to Validate	Standard
			Cancellable Orders	Standard
		Transaction List		Gives access to all transactions managed in the T24 applications Arrangement Architecture and Fund Transfer
			Internal Cash Transfers	Default sub-command of the Transaction List command. Gives access to Internal Cash Transfers.
			Outgoing Payments	Gives access to Outgoing Payments.
			Deposits	Gives access to Deposits to manage them directly in the T24 application Arrangement Architecture.
			Loans	Gives access to Loans to manage them directly in the T24 application Arrangement Architecture.
	Proposal Generator			Standard
		Create Proposal		Standard
		Existing Proposals		Standard

Tab	Menu	Command	Subcommand	Description
	Administration			Gives access to the administration of data related to business objects such as portfolios and strategies.
		Elective Corporate Action		Gives access to the administration of Elective Corporate Actions in a T24 function.
		Portfolio		Standard
		Strategy		Standard

32.2 Display of static data

In the T24 profile, static data screens display the same data as in the default profile - except for client details, which lets you access additional data of the client derived from the T24 system.

This section only describes how to access these additional data and which information is displayed. For more information about static data displayed for the client, refer to section [Client Details](#).

The [Additional data tab](#) is available on the **Client Details** screen. For details about other tabs, see section [Client Details screen tabs](#).

32.2.1 Additional data tab

The **Additional data** tab contains the following sections:

- [Financial Details section](#)
- [KYC section](#)

32.2.1.1 Financial Details section

The **Financial Details** section displays the following client information retrieved from the T24 application.

Field name	Description
Net Monthly Income	Client's net monthly income.
Net Monthly Outflow	Client's net monthly outflow.
Employment Start Date	Starting date of employment.
Employment Status	Employment status of the client.
Employer	Name of client's employer.
Employers Business	Description of the business of the client's employer.
Job Title	Description of the job of the client.
Occupation	Occupation of the client.
Salary	Salary amount of the client.
Annual Bonus	Annual bonus amount of the client.

32.2.1.2 KYC section

The Know Your Customer (KYC) section displays the following client information retrieved from the T24 application.

Field name	Description
Contact Date	KYC contact date.
KYC Complete	Flag indicating whether the KYC has been completed or not.
Last Kyc Review Date	Last KYC review date.
Auto Next Kyc Review	Automatic next KYC review date.
Manual Next Kyc Review	Manual next KYC review date.

Field name	Description
Last Suit Review Date	Last suitability review date.
Auto Next Suit Review	Automatic suitability review date.
Manual Next Suit Review	Manual next suitability review date.
Aml Check	Flag indicating whether anti-money laundering has been checked or not.
Last Aml Result Date	Last anti-money laundering result date.
Aml Result	Result of anti-money laundering.
Calculated Risk Class	-
Manual Risk Class	-
Override Reason	-

32.3 Identification

The Identification function displayed for the T24 Profile presents the same data as the default profile. In addition, you have access to additional details of the client derived from the T24 system.

This section only describes how to access these additional data and which information is displayed. For more information about the Identification function, see section [Identification](#).

The **Additional Data** tab is accessible from the Client Details section (see section [Client Detail section](#)). Information in this tab is similar to the information displayed in the **Additional data** tab for Client Static data in the T24 Profile (see section [Additional data tab](#)).

32.4 Lombard valuation

The Lombard valuation is a special form of valuation that compares the margin values of the held positions and the liabilities. This function displays the Lombard valuation details and the list of positions of a portfolio for a given currency. For more details about how to configure the Lombard valuation function in the WUI, refer to *Triple'A Plus Web and T24 Interaction Reference Guide*.

In the following sections, you will learn how to use the Lombard valuation function for the T24 Profile:

- [Accessing the Lombard valuation](#)
- [Using the Context section](#)
- [Lombard valuation results](#)

32.4.1 Accessing the Lombard valuation

To access the Lombard valuation function:

1. Select the **Portfolio Analysis** tab.
2. From the menu bar, go to **Analysis > Lombard Valuation**.

32.4.2 Using the Context section

1. To specify the nature of the Lombard valuation to be performed, use the **Context** section of the Lombard valuation work area. The following table describes how to use the options in the **Context**:

Item	Selection	Description
Portfolio	<portfolio code>	Determines the portfolio to be included in the Lombard valuation. • If you were previously working on a single portfolio, this portfolio will be kept in the Context and the Lombard valuation will automatically be executed with this portfolio. • If no portfolio was set in the analysis scope or you were working on a set of portfolio, you will have to select a portfolio before executing the Lombard valuation.
Currency	<currency code>	Currency in which the Lombard valuation is to be shown. The currency will default to the currency of the selected portfolio.
Load Hierarchy	No From Parent	If the From Parent option is selected, the Lombard valuation will be launched on the master portfolio and will include all portfolios belonging to the group of the master portfolio. This will default to From Parent.

2. After you have made your selection, click the **Refresh** button to perform the Lombard valuation.

32.4.3 Lombard valuation results

The information displayed in the Lombard valuation result view are:

- [Lombard Valuation Details section](#)
- [List of Positions section](#)

32.4.3.1 Lombard Valuation Details section

The **Lombard Valuation Details** section displays the Lombard valuation at the portfolio level. It contains information such as market value, Lombard value, liabilities, and net Lombard value.

32.4.3.2 List of Positions section

The **List of Positions** section presents the portfolio positions in the currency selected in the context.

32.5 Single Order function

This section covers the creation of orders (e.g., Internal Cash Transfers, Outgoing Payment, Deposits, Loans, etc.) in single mode. These orders are created and stored in the T24 system only. Unlike orders managed in the Triple'A Plus database, no Pre-Trade Compliance Checking is possible.

Orders on securities and derivatives are still managed in Triple'A Plus but the estimation of fees and taxes is calculated by the T24 system.

Orders on Forex Spot and Forex Forward are managed in Triple'A Plus but the estimation of margin pips is calculated by the T24 system.

In the following sections, you will find information about how to use the Single Order function for the the T24 Profile:

- [Creating Internal Cash Transfer orders](#)
- [Creating Outgoing Payment orders](#)
- [Creating Deposit orders](#)
- [Creating Loan orders](#)
- [Creating Security orders](#)
- [Creating Derivatives orders](#)
- [Creating Forex orders](#)

32.5.1 Creating Internal Cash Transfer orders

To create an Internal Cash Transfer order:

1. Select the **Portfolio Analysis** tab.
2. From the menu bar, go to **Order Management > Create Single Order > Internal Cash Transfer**.
 The **Internal Cash Transfer Creation** screen is displayed.
3. Complete the following:
 - a. In the Debit section, enter the Debited Portfolio and the Debited Cash Account.
 - b. In the Credit section, enter the Credited Portfolio and the Credited Cash Account.
 - c. In the Instruction section, do the following:
 - iii. Select a Currency from the drop-down list. This list contains the currency of both debited cash account and credited cash account. If both currencies are similar, the drop-down list contains only one currency.
 - iv. Enter the Execution Date and the Value Date.
 - v. Depending on the selected currency, enter the Debited Amount or the Credited Amount of the transfer.
4. At the bottom of the screen, click the **Validate** button. This action calls the T24 system to validate the information that you entered in the fields. The result of this action is one of the following:
 - No error: The **Internal Cash Transfer Creation** screen is displayed in view mode with additional data regarding the total debited and credited amounts. Go to step [5](#).
 - Errors: The **Internal Cash Transfer Creation** screen is reloaded with error messages displayed at the top of the screen. You cannot force the error messages; you must address the errors (i.e., change the order characteristics) before you can continue.
5. If there are no errors or warnings, click on one of the following action buttons:
 - **Cancel**: This action redirects you to the **Transaction List > Internal Cash Transfers** search screen.
 - **Save**: This action creates the order directly in the T24 system and you are redirected to the **Transaction List > Internal Cash Transfers** search screen.
 - **Modify**: This action reloads the **Internal Cash Transfer Creation** screen with the current data.
6. If there are warning messages, also known as override messages, click on one of the following actions buttons:
 - **Cancel**: This action redirects you to the **Transaction List > Internal Cash Transfers** screen.

- **Confirm:** This action lets you confirm the override messages. The order is then created in the T24 system and you are redirected to the **Transaction List > Internal Cash Transfers** search screen.
- **Modify:** This action reloads the **Internal Cash Transfer Creation** screen with the current data.

32.5.2 Creating Outgoing Payment orders

To create an Outgoing Payment order:

1. Select the **Portfolio Analysis** tab.
2. From the menu bar, go to **Order Management > Create Single Order > Outgoing Payment**.
The **Outgoing Payment Creation** screen is displayed.
3. Complete the following:
 - a. In the Debit section, enter the Debited Portfolio and the Debited Cash Account.
 - b. In the Credit section, enter the Beneficiary, the IBAN/Account Number, and the credited currency.
 - c. In the Instruction section, do the following:
 - i. Select a Currency from the drop-down list. This list contains the currency of both the debited cash account and the credited currency. If both currencies are similar, the drop-down list contains only one currency.
 - ii. Enter the Execution Date and the Value Date.
 - iii. Select a Fees Sharing option from the drop down list.
 - iv. Depending on the selected currency, enter the Debited Amount or the Credited Amount of the transfer.
4. At the bottom of the screen, click the **Validate** button. This action calls the T24 system to validate the information that you entered in the fields. The result of this action is one of the following:
 - No error: The **Outgoing Payment Creation** screen is displayed in view mode with additional data regarding total debited and credited amounts. Go to step 5.
 - Errors: The **Outgoing Payment Creation** screen is reloaded with error messages displayed at the top of the screen. You cannot force the error messages; you must address the errors (i.e., change the order characteristics) before you can continue.
5. If there are no errors or warnings, click on one of the following action buttons:
 - **Cancel:** This action redirects you to the **Transaction List > Outgoing Payment** search screen.
 - **Save:** This action creates the order directly in the T24 system and you are redirected to the **Transaction List > Outgoing Payment** search screen.
 - **Modify:** This action reloads the **Outgoing Payment Creation** screen with the current data.
6. If there are warning messages, also known as override messages, click on one of the following actions buttons:
 - **Cancel:** This action redirects you to the **Transaction List > Outgoing Payment** screen.
 - **Confirm:** This action lets you confirm the override messages. The order is then created in the T24 system and you are redirected to the **Transaction List > Outgoing Payment** search screen.
 - **Modify:** This action reloads the **Outgoing Payment Creation** screen with the current data.

32.5.3 Creating Deposit orders (new contract)

To create a Deposit order:

1. Select the **Portfolio Analysis** tab.
2. From the menu bar, go to **Order Management > Create Single Order > Deposit**.

The **Deposit Product Search** screen is displayed for you to choose a Deposit product.

3. (Optional) Like all Search screens, you can configure your search with additional criteria to narrow down the search results.

The available search criteria are:

Search Criteria	Description
Product Group	Group of the product

4. Select the desired Deposit product.
The **Deposit Order Creation** screen is displayed.
5. Complete the following:
 - a. In the Identification section, enter the portfolio, the arrangement effective date, and the currency. When the portfolio is entered, information about this portfolio and the client owner of the portfolio (the direct link is the client in the Triple'A Plus Portfolio table) are displayed. When all fields are completed, the **Next** button is available for you to continue the deposit order creation. If you want to clear all fields that you completed in this section, click the **Reset** button.
 - b. In the Instruction section, select the cash account to debit and enter the amount. This amount is debited from the cash account and is credited to the deposit. When all fields are completed, the **Validate** button is available to validate the deposit order creation (see step 6). If you want to clear all fields that you completed in this section as well as those that you completed in the Identification section, click the **Reset** button.
6. At the bottom of the screen, click the **Validate** button. This action calls the T24 Arrangement Architecture (T24 AA) application to validate the information that you entered in the fields. The result of this action is one of the following:
 - No error: The **Deposit Order Creation** screen is displayed in view mode, and the deposit rate calculated by the T24 AA application is also displayed. Go to step 7.
 - Errors: The **Deposit Order Creation** screen is reloaded with error messages displayed at the top of the screen. You cannot force the error messages; you must address the errors (i.e., change the order characteristics) before you can continue.
7. If there are no errors, click on one of the following action buttons:
 - **Cancel**: This action redirects you to the search screen.
 - **Save**: This action calls the T24 AA application with the Input action and the order is stored in the T24 AA application.
 - **Modify**: This action reloads the **Deposit Order Creation** screen with the current data.
8. If there are warning messages, also known as override messages, click on the **Confirm** button for each override message to store the order in the T24 AA application. Other buttons are still available (**Modify** and **Cancel**) similar to the previous step.
9. When the order is stored in the T24 AA application, the screen shows the view mode with a message to indicate the successful action. Click on one of the following action buttons:
 - **New Deposit Order**: This action takes you to step 2 to select a new product.
 - **Transaction List - Deposit**: This action launches the Transaction List function for Deposits.

32.5.4 Creating Loan orders (new contract)

To create a Loan order:

1. Select the **Portfolio Analysis** tab.
2. From the menu bar, go to **Order Management > Create Single Order > Loan**.

The **Loan Product Search** screen is displayed for you to choose a Loan product.

3. (Optional) Like all Search screens, you can configure your search with additional criteria to narrow down the search results.
4. The available search criteria are:

Search Criteria	Description
Product Group	Group of the product

5. Select the desired Loan product.

The **Loan Order Creation** screen is displayed.

6. Complete the following:
 - a. In the Identification section, enter the portfolio, the arrangement effective date, and the currency. When the portfolio is entered, information about this portfolio and the client owner of the portfolio (the direct link is the client in the Triple'A Plus Portfolio table) are displayed. When all fields are completed, the **Next** button is available for you to continue the loan order creation. If you want to clear all fields that you completed in this section, click the **Reset** button.
 - b. In the Instruction section, select the cash account to credit and enter the amounts and the maturity date. When all fields are completed, the **Validate** button is available to validate the loan order creation (see step 7). If you want to clear all fields that you completed in this section as well as those you completed in the Identification section, click the **Reset** button. Regarding the amounts:
 - Commitment amount is the contractual amount of the loan. The sum of the disbursement amounts cannot be greater than the commitment amount. Note that this rule is not applicable to specific loans such as revolving loans.
 - Disbursement amount is the amount credited to the cash account and debited to the loan balance.
7. At the bottom of the screen, click the **Validate** button. This action calls the T24 Arrangement Architecture (T24 AA) application to validate the information that you entered in the fields. The result of this action is one of the following:
 - No error: The **Loan Order Creation** screen is displayed in view mode, the loan rate calculated by the T24 AA application is also displayed. Go to step [8](#).
 - Errors: The **Loan Order Creation** screen is reloaded with error messages displayed at the top of the screen. You cannot force the error messages; you must address the errors (i.e., change the order characteristics) before you can continue.
8. If there are no errors or warnings, click on one of the following action buttons:
 - **Save**: This action calls the T24 AA application with the Input action and the order is stored in the T24 AA application.
 - **Modify**: This action reloads the **Loan Order Creation** screen with the current data.
9. If there are warning messages, also known as override messages, click on the **Confirm** button for each override message to store the order in the T24 AA application. Other buttons are still available (**Modify** and **Cancel**) similar to the previous step.
10. When the order is stored in the T24 AA application, the screen shows the view mode with a message to indicate the successful action. Click on one of the following action buttons:

- **New Loan Order:** This action takes you to step [2](#) to select a new product.
- **Transaction List - Loan:** This action launches the Transaction List function for Loans.

32.5.5 Creating Security orders

Orders on securities are managed in Triple'A Plus but the estimation of fees and taxes is calculated by the T24 system.

When the order is completed or updated, the T24 SEC.OPEN.ORDER (SOO) application is automatically called to calculate the fees and taxes that are displayed in the **Fees & Taxes** tab. You can update them after the estimation calculation.

Note that after an update of the main attributes, the estimation calculation is done again and all information displayed in the **Fees & Taxes** tab is replaced by the new calculation. For details of the main attributes, refer to the *Triple'A Plus Web and T24Interaction Reference Guide*.

32.5.6 Creating Derivatives orders

Orders on derivatives are managed in Triple'A Plus but the estimation of fees and taxes is calculated by the T24 system.

When the order is completed or updated, the T24 DX.ORDER (DX) application is automatically called to calculate the fees and taxes that are displayed in the **Fees & Taxes** tab. You can update them after the estimation calculation.

Note that after an update of the main attributes, the estimation calculation is done again and all information displayed in the **Fees & Taxes** tab is replaced by the new calculation. For details of the main attributes, refer to the *Triple'A Plus Web Packaging Reference Guide*.

32.5.7 Creating Forex orders

Orders on Forex Spot and Forex Forward are managed in Triple'A Plus but the estimation of margin pips is calculated by the T24 system.

When the order is completed or updated, the T24 FOREX (FX) application is automatically called to calculate the margin pips that is displayed in the Rate section. You can update it after the estimation calculation.

Note that after an update of the main attributes, the estimation calculation is done again and the margin pips is replaced by the new calculation. For details of the main attributes, refer to the *Triple'A Plus Web Packaging Reference Guide*.

32.6 Transaction List function

In this section, you will find information about how to use the Transaction List function for managing the following orders for the T24 Profile:

- [Internal Cash Transfer orders](#)
- [Outgoing Payment orders](#)
- [Deposit orders](#)
- [Loan orders](#)

32.6.1 Internal Cash Transfer orders

To access the list of Internal Cash Transfer orders:

1. From the menu bar, go to **Order Management > Transaction List > Internal Cash Transfer**.

The **Internal Cash Transfer Search** screen is displayed with two tabs. By default, the tab **Pending Validation** is selected. The other tab is **Validated**. Each tab groups the Internal Cash Transfer orders by status.

2. Define the search criteria and execute the search. For more information, see section [Searching a business object with Search or Advanced Search icon](#).

The available search criteria are:

Search Criteria	Description
Code	Internal Cash Transfer code
Debited Client	Code of the debited client of the Internal Cash Transfer
Debited Cash Account	Code of the debited cash account of the Internal Cash Transfer
Debited Currency	Code of the debited currency of the Internal Cash Transfer
Debited Value Date	Debited value date of the Internal Cash Transfer
Execution Date	Execution date of the Internal Cash Transfer
Credited Client	Code of the credited client of the Internal Cash Transfer
Credited Cash Account	Code of the credited cash account of the Internal Cash Transfer
Credited Currency	Code of the credited currency of the Internal Cash Transfer
Credited Value Date	Credited value date of the Internal Cash Transfer
Status	Status of the Internal Cash Transfer

Search results (in which you have access rights) that match the specified criteria are displayed in a table. The columns of the search results table are:

Search Result	Description
Code	Internal Cash Transfer code
Execution Date	Execution date of the Internal Cash Transfer
Debited Cash Account	Code of the debited cash account of the Internal Cash Transfer
Debited Portfolio	Name of the debited portfolio of the Internal Cash Transfer
Debited Client Code	Code of the debited client
Debited Client Name	Name of the debited client
Total Debited Amount	Total debited amount (amount plus tax and fees) of the Internal Cash Transfer
Credited Cash Account	Code of the credited cash account of the Internal Cash Transfer
Credited Portfolio	Name of the credited portfolio of the Internal Cash Transfer
Credited Client Code	Code of the credited client
Credited Client Name	Name of the credited client
Total Credited Amount	Total credited amount (amount plus tax and fees) of the Internal Cash Transfer

Search Result	Description
Status	Status of the Internal Cash Transfer

- To view additional information about a particular Internal Cash Transfer order, click on the **Details** icon located in the first column of the search results table. (For more information about icons, see section [Icons, fields, and links](#)).

Details of the selected order are displayed in view mode.

32.6.2 Outgoing Payment orders

To access the list of Outgoing Payment orders:

- From the menu bar, go to **Order Management > Transaction List > Outgoing Payment**.

The **Outgoing Payment Search** screen is displayed with two tabs. By default, the tab **Pending Validation** is selected. The other tab is **Validated**. Each tab groups the Outgoing Payment orders by status.

- Define the search criteria and execute the search. For more information, see section [Searching a business object with Search or Advanced Search icon](#).

The available search criteria are:

Search Criteria	Description
Code	Outgoing Payment code
Debited Portfolio	Code of the debited portfolio of the Outgoing Payment
Debited Client	Code of the debited client of the Outgoing Payment
Debited Cash Account	Code of the debited cash account of the Outgoing Payment
Debited Currency	Code of the debited currency of the Outgoing Payment
Debited Value Date	Debited value date of the Outgoing Payment
Execution Date	Execution date of the Outgoing Payment
Credited Value Date	Credited value date of the Outgoing Payment
Status	Status of the Outgoing Payment

Search results (in which you have access rights) that match the specified criteria are displayed in a table. The columns of the search results table are:

Search Result	Description
Code	Outgoing Payment code
Execution Date	Execution date of the Outgoing Payment
Debited Cash Account	Code of the debited cash account of the Outgoing Payment
Debited Portfolio	Name of the debited portfolio of the Outgoing Payment
Debited Client Code	Code of the debited client
Debited Client Name	Name of the debited client
Total Debited Amount	Total debited amount (amount plus tax and fees) of the Outgoing Payment
Beneficiary	Beneficiary of the Outgoing Payment
Total Credited Amount	Total credited amount (amount plus tax and fees) of the Outgoing Payment
Status	Status of the Outgoing Payment

- To view additional information about a particular Outgoing Payment order, click on the **Details** icon located in the first column of the search results table. (For more information about icons, see section [Icons, fields, and links](#)).

Details of the selected order are displayed in view mode.

32.6.3 Deposit orders

To access the list of Deposit orders:

- From the menu bar, go to **Order Management > Transaction List > Deposit**.

The **Deposit Search** screen is displayed.

- Define the search criteria and execute the search. For more information, see section [Searching a business object with Search or Advanced Search icon](#).

The available search criteria are:

Search Criteria	Description
Product	Product description of the arrangement
Product Group	Group of the product
Client	Customer of the arrangement
Currency	Currency of the arrangement
Status	Status of the arrangement

Search results (in which you have access rights) that match the specified criteria as well as available actions are:

Search Result	Description
Increase	Increase the Deposit amount means to initiate a fund transfer to increase the amount of the Deposit. Icon is available if no activity is pending on this deposit and its status is authorised (*). See section Increasing the Deposit .
Decrease	Decrease the Deposit amount means to initiate a fund transfer to decrease the amount of the Deposit. Icon is available if no activity is pending on this deposit, the balance amount is greater than zero, and its status is authorised (*). See section Decreasing the Deposit .
Close	Close the Deposit means to initiate a fund transfer to sell off the Deposit. Icon is available if no activity is pending on this deposit, the balance amount is greater than zero, and its status is authorised (*). See section Closing the Deposit .
View	View the Deposit.

(*) Authorised statuses are Authorised, Authorised Forward, and Current. The real codes are AUTH, AUTH-FWD, and CURRENT.

32.6.3.1 Increasing the Deposit

To initiate a fund transfer to increase the Deposit amount:

- Click the **Increase** icon (see section [Deposit orders](#)).

The **Increase Deposit** screen is displayed with the following sections:

- **Identification** section: This section shows information in view mode about the main Deposit attributes such as arrangement identification, portfolio, client, and arrangement effective date.
 - **Increasing Amount** section: Enter the effective date, the cash account to debit, and the amount to increase, and then the future Deposit amount is calculated.
2. At the bottom of the screen, click the **Validate** button. This action calls the T24 Fund Transfer (T24 FT) application with the Validate action. The result of this function is one of the following:
 - No error: The **Increase Deposit** screen is displayed in view mode. Go to step 3.
 - Errors: The **Increase Deposit** screen is reloaded with error messages displayed at the top of the screen. You cannot force the error messages; you must address the errors (i.e., change the order characteristics) before you can continue.
 3. If there are no errors or warnings, click on one of the following action buttons:
 - **Save**: This action calls the T24 FT application with the Input action and the fund transfer order is stored in the T24 FT application.
 - **Modify**: This action reloads the **Increase Deposit** screen with the current data, which allows you to modify the Increasing Amount section.
 - **Cancel**: This action returns you to the Deposit List.
 4. If there are warning messages, also known as override messages, click on the **Confirm** button for each override message to store the order in the T24 FT application. Other buttons are still available (**Modify** and **Cancel**) similar to the previous step.
 5. When the order is stored in the T24 FT application, the Deposit List is displayed.

32.6.3.2 Decreasing the Deposit

To initiate a fund transfer to decrease the Deposit amount:

1. Click the **Decrease** icon (see section [Deposit orders](#)).
 The **Decrease Deposit** screen is displayed with the following sections:
 - **Identification** section: This section shows information in view mode about the main Deposit attributes such as arrangement identification, portfolio, client, and arrangement effective date.
 - **Decreasing Amount** section: Enter the effective date, the cash account to credit, and the amount to decrease, and then the future Deposit amount is calculated.
2. At the bottom of the screen, click the **Validate** button. : This action calls the T24 Fund Transfer (T24 FT) application with the Validate action. The result of this function is one of the following:
 - No error: The **Decrease Deposit** screen is displayed in view mode. Go to step 3.
 - Errors: The **Decrease Deposit** screen is reloaded with error messages displayed at the top of the screen. You cannot force the error messages; you must address the errors (i.e., change the order characteristics) before you can continue.
3. If there are no errors or warnings, click on one of the following action buttons:
 - **Save**: This action calls the T24 FT application with the Input action and the fund transfer order is stored in the T24 FT application.
 - **Modify**: This action reloads the **Decrease Deposit** screen with the current data, which allows you to modify the Decreasing Amount section.
 - **Cancel**: This action returns you to the Deposit List.
4. If there are warning messages, also known as override messages, click on the **Confirm** button for each override message to store the order in the T24 FT application. Other buttons are still available (**Modify** and **Cancel**) similar to the previous step.
5. When the order is stored in the T24 FT application, the Deposit List is displayed.

32.6.3.3 Closing the Deposit

Click the **Close** icon (see section [Deposit orders](#)), and the **Close Deposit** screen is displayed.

The steps to closing the Deposit is similar to decreasing the Deposit (see section [Decreasing the Deposit](#)) but the amount is not editable and will always be set to the Deposit amount.

32.6.4 Loan orders

To access the list of Loan orders:

1. From the menu bar, go to **Order Management > Transaction List > Loans**.

The **Loans Search** screen is displayed.

2. Define the search criteria and execute the search. For more information, see section [Searching a business object with Search or Advanced Search icon](#).

The available search criteria are:

Search Criteria	Description
Product	Product description of the arrangement
Product Group	Group of the product
Client	Customer of the arrangement
Currency	Currency of the arrangement
Status	Status of the arrangement

Search results (in which you have access rights) that match the specified criteria as well as available actions are

Search Result	Description
Increase	Increase the Loan amount means to initiate a fund transfer to disburse the Loan. Icon is available if no activity is pending on this loan, and its status is authorised (*), and the disbursement amount is available. See section Increasing the Loan.
Decrease	Decrease the Loan amount means to initiate a fund transfer to decrease the amount of the Loan. Icon is available if no activity is pending on this loan, the balance amount is greater than zero, and its status is authorised (*). See section Decreasing the Loan.
Close	Close the Loan means to initiate a fund transfer to sell off the Loan. Icon is available if no activity is pending on this loan, the balance amount is greater than zero, and its status is authorised (*). See section Closing the Loan.
View	View the Loan.

(*) Authorised statuses are Authorised, Authorised Forward, and Current. The real codes are AUTH, AUTH-FWD, and CURRENT).

32.6.4.1 Increasing the Loan

To initiate a fund transfer to increase the Loan amount:

1. Click the **Increase** icon (see section [Loan orders](#)).

The **Increase Loan** screen is displayed with the following sections:

- **Identification** section: This section shows information in view mode about the main Loan attributes such as arrangement identification, portfolio, client, and arrangement effective date.
 - **Increasing Amount** section: Enter the effective date, the cash account to debit, and the amount to disburse, and then the future available disbursement amount is calculated.
2. At the bottom of the screen, click the **Validate** button. This action calls the T24 Fund Transfer (T24 FT) application with the Validate action. The result of this function is one of the following:
 - No error: The **Increase Loan** screen is displayed in view mode. Go to step 3.
 - Errors: The **Increase Loan** screen is reloaded with error messages displayed at the top of the screen. You cannot force the error messages; you must address the errors (i.e., change the order characteristics) before you can continue.
 3. If there are no errors or warnings, click on one of the following action buttons:
 - **Save**: This action calls the T24 FT application with the Input action and the fund transfer order is stored in the T24 FT application.
 - **Modify**: This action reloads the **Increase Loan** screen with the current data, which allows you to modify the Increasing Amount section.
 - **Cancel**: This action returns you to the Loan List.
 4. If there are warning messages, also known as override messages, click on the **Confirm** button for each override message to store the order in the T24 FT application. Other buttons are still available (**Modify** and **Cancel**) similar to the previous step.
 5. When the order is stored in the T24 FT Application, the Loan List is displayed.

32.6.4.2 Decreasing the Loan

To initiate a fund transfer to decrease the Loan amount:

1. Click the **Decrease** icon (see section [Loan orders](#)).
 The **Decrease Loan** screen is displayed with the following sections:
 - **Identification** section: This section shows information in view mode about the main Loan attributes such as arrangement identification, portfolio, client, and arrangement effective date.
 - **Decreasing Amount** section: Enter the effective date, the cash account to debit, and the amount to decrease, and then the future Loan amount is calculated.
2. At the bottom of the screen, click the **Validate** button. This action calls the T24 Fund Transfer (T24 FT) application with the Validate action. The result of this function is one of the following:
 - No error: The **Decrease Loan** screen is displayed in view mode. Go to step 3.
 - Errors: The **Decrease Loan** screen is reloaded with error messages displayed at the top of the screen. You cannot force the error messages; you must address the errors (i.e., change the order characteristics) before you can continue.
3. If there are no errors or warnings, click on one of the following action buttons:
 - **Save**: This action calls the T24 FT application with the Input action and the fund transfer order is stored in the T24 FT application.
 - **Modify**: This action reloads the **Decrease Loan** screen with the current data, which allows you to modify the Decreasing Amount section.
 - **Cancel**: This action returns you to the Loan List.
4. If there are warning messages, also known as override messages, click on the **Confirm** button for each override message to store the order in the T24 FT application. Other buttons are still available (**Modify** and **Cancel**) similar to the previous step.

5. When the order is stored in the T24 FT Application, the Loan List is displayed.

32.6.4.3 Closing the Loan

Click the **Close** icon (see section [Loan orders](#)), and the **Close Loan** screen is displayed.

The steps to closing the Loan is similar to decreasing the Loan (see section [Decreasing the Loan](#)) but the amount is not editable and will always be set to the Loan amount.

32.7 Initiate Order

This section explains only the specificities of the Portfolio Manager for T24 Profile in this function.

Money Market positions are managed in T24 as Deposits and Loans so checkboxes on Money market positions are always disabled. Orders on Money market positions are not initiated by this function.

For managing Deposit or Loan orders, see section [Transaction List function](#).

32.8 Order Session

This section explains only the specificities of the Portfolio Manager for T24 Profile in this function.

Deposit and Loan orders are managed in T24; **Deposit** and **Loan** buttons are not displayed in Order Session.

To create new orders on Deposit or Loan, see sections [Creating Deposit orders](#) and [Creating Loan orders](#).

32.9 Proposal Generator

This section explains only the specificities of the Portfolio Manager for T24 Profile in this function.

Deposit and Loan orders are managed in T24; **Deposit** and **Loan** buttons are not displayed in Order Session.

To create new orders on Deposit or Loan, see sections [Creating Deposit orders](#) and [Creating Loan orders](#).

32.10 Elective Corporate Action

The Elective Corporate Action function lets you enter the client's decisions regarding Elective Corporate Actions (e.g., payment of dividends) directly into the T24 system.

In the following sections, you will learn how to manage Elective Corporate Actions retrieved from the T24 system:

- [Searching for Elective Corporate Actions](#)
- [Completing Elective Corporate Actions](#)

32.10.1 Searching for Elective Corporate Actions

To search for an Elective Corporate Action:

1. Select the **Portfolio Analysis** tab.
2. From the menu bar, go to **Administration > Elective Corporate Action**.

The **Elective Corporate Action Search** screen is displayed with tree tabs. By default, the **To Be Completed** tab is selected. The other tabs are **Pending Validation** and **Validated**. Each tab groups the Elective Corporate Action by status.

3. Define the search criteria and execute the search. For more information, see section [Searching a business object with Search or Advanced Search icon](#).

The available search criteria are:

Search Criteria	Description
Code	Elective Corporate Action code.
Portfolio	Portfolio code of the Elective Corporate Action.
Instrument	Instrument code of the Elective Corporate Action.
Currency	Currency code of the Elective Corporate Action.
Value Date	Value date of the Elective Corporate Action.

Search results (in which you have access rights) that match the specified criteria are displayed in a table. The columns of the search results table are:

Search Result	Description
Event Type	Elective Corporate Action type.
Code	Elective Corporate Action code.
Currency	Currency code of the Elective Corporate Action.
Portfolio Name	Portfolio name of the Elective Corporate Action.
Client Name	Client name of the Elective Corporate Action.
Instrument Name	Instrument name of the Elective Corporate Action.
Holding Quantity	Instrument quantity currently held by the client.
Value Date	Value date of the Elective Corporate Action booking.
Replay Date	Date until when the client's decision can be defined regarding the Elective Corporate Action.
Ex Date	Date until when the trades on the corresponding instrument are taken into account.
Pay Date	Date when the Elective Corporate Action is issued.

4. To complete a specific Elective Corporate Action, click on its **Complete** icon located in the first column of the search result table. (For more information about icons, see section [Icons, fields, and links](#).)

The selected Elective Corporate Action is displayed in edit mode. (See section [Completing Elective Corporate Actions](#) for information about how to complete the action.)

5. To view additional information about a specific Elective Corporate Action, click on its **Details** icon located in the second column of the search results table. (For more information about icons, see section [Icons, fields, and links](#).)

The selected **Elective Corporate Action** is displayed in view mode.

32.10.2 Completing Elective Corporate Actions

To complete an Elective Corporate Action:

1. From the **Elective Corporate Action** search screen, select an Elective Corporate Action to complete. (For information about the search screen, see section [Searching for Elective Corporate Actions](#).)

The **Complete Elective Corporate Action** screen is displayed.

2. Complete the following:
 - a. In the Account section, select the Account number from the drop-down list. This list contains the cash accounts related to the portfolio of the Elective Corporate Action.
 - b. In the Instruction section, select the Holding Mode:
 - i. If you select the option Total Holding, then specify in the Selected Option field the number of the option you have chosen between all available options.
 - ii. If you select the option Split Holding, then specify the Quantity for each existing options. The total of all quantities should be equal to the Holding Quantity of the Elective Corporate Action.
3. At the bottom of the screen, click on one of the following actions buttons:
 - **Save:** This action calls the T24 system to validate the information that you entered in the fields. The result of this action is one of the following:
 - No error: The Elective Corporate Action is updated in the T24 system and you are redirected to the **Elective Corporate Action** search screen.
 - Warnings, also called override messages: The **Complete Elective Corporate Action** screen is displayed again with warning messages displayed at the top of the screen. Click on the **Confirm** button to accept the override messages and to update the Elective Corporate Action in the T24 system. You will then be redirected to the **Elective Corporate Action** search screen.
 - Errors: The **Complete Elective Corporate Action** screen is reloaded with error messages displayed at the top of the screen. You cannot force the error messages; you must address the errors (i.e., change the Elective Corporate Action characteristics) before you can continue.
 - **Cancel:** This action redirects you to the **Elective Corporate Action** search screen.
